News of importance to the future of the port of Vancouver comes to hand this week in the announcement made with reference to the probable use of False Creek for ocean craft. As a Vancouver writer puts it, "The city is young, and many of its people have not yet realized the cramping effects of the control of the water-front by a big corporation, [such as the C.P.R.], and it is this effect that will be, to a large extent, neutralized by the improvement of False Creek." So the people are naturally pleased that the Ottawa minister of public works sent out Mr. Roy, inspector general of public works, to examine the locality. This official reports that False Creek is one of the finest of sites for a harbor, and he purposes recommending the Ottawa Government to so dredge and reclaim the creek that ships of the deepest draught can use it. This step would double the size of Vancouver water-front, and would provide a public harbor and docks, uncontrolled by corporations or individuals. The news, we repeat, is good news, and it is to be hoped the Dominion Government will not take too many years to consider the subject before acting upon it.

⁂

There appears to be quite a stir among various parties in Vancouver in the direction of putting up abattoirs or packing-houses, or both. Mr. Telfer, of New York, who used to be in charge of the Montreal civic abattoir, is out in Vancouver now, and his presence there makes people talk.

Vault doors in Bank of Montreal and Royal Trust Company, Montreal Three times larger and heavier than any other in Canada. Doors and Vestibules weigh **60 tons**. Total weight of lining and doors **260 tons**. Accepted to be the finest piece of vault work in construction and workmanship in the Dominion. — Built by the old established firm of

TENDERS FOR DEBENTURES.

TENDERS, sealed and endorsed "Tenders for Debentures," will be received at the office of the undersigned, until Monday, the 18th day of September next, at 4 p. m., for the purchase, in whole or in part, of Debentures of the Corporation of the City of Victoria, as follows:

1. Debentures amounting to $100,000.00, issued under authority of the "Sewers Loan Guarantee By-law, 1905," numbered 456, dated the 1st August, 1905, and maturing 1st August, 1955.

2. Debentures amounting to $11,000.00, issued under authority of the "Electric Lighting Loan By-law, 1905," No. 457, dated the 1st August, 1905, and maturing 1st August, 1915.

Both sets of Debentures are secured upon the credit of the Municipality as a whole; their denominations are No. 1, $1,000.00 each: No. 2, $500.00 each, and they bear interest at 4 per cent, per annum, payable half yearly, the principal and interest being payable at the office of the Bank of British North America, either in Victoria B. C., Montreal, London, England or New York, U. S. A.

The tenderer must state the price net at Victoria which he will pay. In addition to the net price, the purchaser will have to pay to the Corporation the interest on the said Debentures for the period between the 1st of August, 1905, and the date of the receipt of the purchase money by the City Treasurer.

The Corporation does not bind itself to accept any tender.

TRAINING IN ACCOUNTANCY.

At the seventh annual convention of the National Association of Accountants and Bookkeepers, held in Detroit in August, where he is said to have made the hit of the evening, Mr. F. H. MacPherson, C.A., of Ontario, delivered an address on the subject of the value of technical training in accounting and systematizing methods to the business man. After a few preliminary remarks, Mr. MacPherson proceeded to deal broadly with the subject of technical training. "I do not suppose," he said, "that in the present day and generation there can be found many persons so bold as to say that technical training in any subject is not of advantage. Not many years have passed since so much could be said. Until recently the inherited forms and methods of education as they came from the countries of the Old World were thought quite sufficient for the needs of the American youth. But times have changed with the changes in economic conditions. Along with the growth of the country came the necessity for changes in our educational needs. New problems demanded the working out of new ways in which to solve them, new difficulties required new methods, and so it is that we have the technical schools and classes of the present day. Modern business conditions have given rise to new and important callings, requiring special training.

We have had the bookkeeper with us for many generations, but the accountant is of more recent growth. While the duties of the bookkeeper are important, the work of the trained accountant is doubly so, entering as it does into the very heart and core of business enterprises. And accountancy is a science founded upon principles capable of being taught, systematized and studied with all the force, certainty and truthfulness of the principles underlying other scientific professions.

Schools and colleges are quickly realizing the needs of the hour, and in most of these may be found a commercial department, in which the rudimentary principles and technique of the business are being taught. The results as far as they go are satisfactory, and form a ground work for that higher training which must come from contact with the actual man of business. The training of the teachers engaged in the colleges and schools is ordinarily altogether theoretical in character, and under such circumstances it is not possible that they can impart to their pupils anything more than they themselves possess. The necessity for a higher course of training by practical business men—by men who have learned their lessons in the hard and sometimes rough school of experience—is now being looked upon as absolutely necessary to properly fit the student in accountancy for the work in which he seeks to engage.

Within the past few years several of the universities have actually taken up the question of higher education in accountancy, and have opened departments in "Commerce and Finance," and one of the fundamentals is that instruction shall be imparted by practical business men, and as well by public accountants of long and varied experience.

The intent of these departments, as stated recently by one of the professors, is to "impart a knowledge of the raw materials of industry, with the sources of their supply, and the methods of their production; of the institutions and agencies of finance, industry and trade; of the methods employed in the organization and management of the bank, the factory, and the store; of the principles which underlie the financing of a business, the granting of credit, the sale of goods, the education of the consumer by means of advertising; of the principles of bookkeeping, the interpretation of the accounts of partnerships and corporations; the relation of the business man to the transportation company; the principles of commercial law, of real estate values and management, and of insurance; the principles upon which municipal finances should be handled; and the methods for caring for these in the proper and most scientific way; depreciation and the means of determining such; and the many other points which confront the public accountant at every turn."

It does not require any great degree of comprehension to see that knowledge of these things cannot be imparted to the student by the theoretically trained teacher. It cannot be expected that men not in business can teach business; and further—and here a very serious difficulty presents itself—there is the lack of materials, the object lessons which are available in the other professions. The materials for the study of business life lie in the outside world, and it is difficult to bring them together in such form as to make them available for the student's use.

The published reports of the various Federal and State Departments; of the law reports; of the Wealth, Debt and Taxation Section of the Census Department, which deals with municipal systems, forms and reports; all of these are at hand and available; but these form a very small and comparatively unimportant proportion of the materials necessary. Access to the office archives of large manufacturing industries and mercantile concerns, to the offices of railroads, mines and other corporations is desirable. And then the speaker paid a tribute to the work of the Association, and praised the Business Man's Magazine.

It was a professor in one of the universities who, in discussing the subject of higher accountancy, said:

"The practice of business can only be thoroughly mastered in the transaction of business, and unless the student gains this experience during his college or school course he must expect to serve the regular apprenticeship after graduation."

And now a word as to the requirements of the individual who seeks the wider, higher field, and the possibilities for work to the competent man.

Average ability, horse-sense and power of application are the principal requisites. Work, work, work. When not busy on work for your clients, get busy studying the office systems with which you are least familiar; make application to the proprietors of large institutions which cover such ground as you seek to learn about to permit you to look over their systems; make notes of what you see, and learn; read the text books over again, study the systems as outlined in the office magazines, take the course as outlined by the International Accountants' Society; meet in convention; talk your work over with others who have had the experience you are seeking. Let no day pass without making the most of your opportunities. Keep adding to the storehouse of knowledge, daily, some new thing, which later on (and you never know how quickly) you may turn to practical account.

In closing, I want to say that in my judgment no other profession offers the magnificent opportunities that does higher accountancy. The work is pleasant, the pay is good, and the results may generally be made satisfying to the client.

* * *

LEAD PRODUCTION IN BRITISH COLUMBIA.

The returns of bounty paid by the Dominion Government for the production of lead in British Columbia in 1904-5 are almost double the amount so paid in the previous year. Full returns from forty-seven mines are given by the Nelson News. They amount to 13,446,686 pounds, or, say, 6,723 tons. There is besides 7,000 pounds shipped from ten mines on which bounty has not been claimed. The St. Eugene mine secured bounty on 6,247,000 pounds, the North Star on 2,083,000 pounds, the Slocan Star on 1,722,000, the Ivanhoe on 885,000, the Idaho on 607,000, the Payne on 396,000, the Paradise on 321,000. Then in order come the Silver Cup, Enterprise, Lucky Jim, Silver Hustler, Ymir, Triune.

The returns from the Hall Mines smelter were published in July. It is now possible to give a summary of production and bounty for the year, thus:

	Lbs. Lead.	Bounty.
Nelson smelter	16,421,071	$116,709 10
Trail smelter	13,446,086	96,684 36
Unclaimed	7,599	51 84

Including claims paid at another smelter, the totals for lead produced and treated in Canada are 33,730,546

GAS AS A CAUSE OF FIRE.

The Ohio Fire Marshal has issued a paper on dangers from leakage of manufactured gas and on regulations for the distribution of natural gas. He states that the average number of fires in Ohio caused by gas fixtures is about two hundred and fifty. "Companies supplying manufactured gas anticipate that one-sixth of all the gas they force into the mains will be lost through leaks, the cost of such a loss being less than the cost of finding, uncovering and stopping the leakage."

As to lost or escaped gas, Mr. Davis says: "Unfortunately, the only way in which it can be found is by exploding it, for in filtering through the earth about the service pipe it loses its odor. The striking of a match, the entrance of a flying spark or the taking of a lamp into the cellar may ignite it. Ninety-four such explosions occurred in Ohio during last year." An eminent expert in gas leakage, James C. Bayles, M.E., Ph.D., whose experience covers two continents, in speaking of the presence in houses of gas from defective mains, in "Insurance Engineering," said: "The most dangerous characteristic of this filtered gas is that it has little or no odor. None of the gases composing it carries any smell of its own. It is a rattlesnake which has lost its rattle; its power and disposition to strike remain unabated, but it is incapable of giving any warning of its presence or purpose. In buildings fronting on asphalted streets it is rarely looked for in vain."

* * *

OUR HALIFAX LETTER.

The Halifax Board of Trade is making a determined effort to influence public opinion throughout the Province on some of the important questions of the day, such as the fast Atlantic service, steel ship-building, forest protection, etc. At a meeting of the council it was proposed to have a series of public meetings during the coming exhibition, when addresses should be delivered on these topics. It has been found, however, that sufficient time is not left in which to complete such an arrangement, and that part of the programme will have to be deferred until next year. The board will have a booth at the Provincial Fair this year, however, and have had a large number of cards printed containing short, pithy paragraphs on the subjects just mentioned, giving facts and figures which should prove striking to those who read them. These cards will be placed around in prominent positions so that even he who runs may read. Next year at the Dominion Exhibition the idea mentioned is intended to be carried out more extensively.

There has been a heavy decline in the gold output of this Province during the past year. In 1903 the output was 27,779 ounces from 103,856 tons of quartz crushed. Last year the output was less than half of that, namely, 11,273 ounces from 45,436 tons of quartz. It is understood that the decline for the current year will be even greater than this. The output of coal, on the other hand, increased, being 5,131,985 tons, against 5,100,115 in 1903. The figures for this year will probably be about equal to 1903.

The Local Government has made appointments to the four vacancies existing on the Provincial Exhibition Commission staff. One of the vacancies, caused by the appointment of Hon. Mr. Longley to a judgeship, has been filled by his re-appointment to the Commission. The other appointments were Hon. W. T. Pipes and Thomas Trotter, M.P.P. The personnel of the Commission is now as follows: Mayor McIlreith, Halifax; Thomas Trotter, M.P.P., Antigonish; J. W. Bigelow, Wolfville; Mr. Justice Longley, Halifax; J. R. Wyman, Yarmouth; David Logan, Pictou; Ald. J. A. Johnson, Ald. P. F. Martin, Ald. Hawkins, and W. J. Clayton, Halifax.

A new sealing enterprise is to be undertaken. The owners of the sealer, "Edith R. Balcom," having decided to send her far south of the Falkland Islands, the former headquarters, five other owners decided to make a similar experiment. The new grounds are near the South Shetlands, about twelve degrees further south than the Falklands. It is said that no sealers have been on those grounds since the Americans left them sixty or seventy years ago.

The Provincial Exhibition of Nova Scotia opens next week, and a large attendance is expected. The mines exhibit will no doubt be far ahead of anything yet attempted in this Province. The new Mines Building has been the means of attracting exhibitors on a larger scale than heretofore. Among the large displays will be those of the Nova Scotia Government, Dominion Iron and Steel Company, Nova Scotia Steel and Coal Co., Londonderry Iron Co., Montreal Pipe Foundry Co., Dominion Coal Company, Intercolonial Coal Mining Co., Acadia Coal Company, Dominion Tar and Chemical Co., Sydney Cement Co., Sydney Coal Co., Cumberland Coal and Railway Co. The Manufacturers' Building and Machinery Hall promise also to be well filled with attractions, and the other exhibits are very large.

The extension of the Intercolonial Railway into the city proper is now an assured fact. The Government has decided to expropriate the properties on the north side of Water Street, from North Street (the present terminus) to Cornwallis Street, and including Gray's Lane and Gerrish Street, for this purpose.

There promises to be more competition than usual in the fruit-buying operations this year. Heretofore practically all the fruit in the Annapolis Valley has been shipped to London or Liverpool. Returns from the English market were far from satisfactory last year, however, and other markets will be sought to a greater extent hereafter. Mexico is looked upon as a promising market for the future.

Disastrous forest fires have been visiting the Maritime Provinces. A few days ago, as you announced, the thriving village of Belmont, on the Intercolonial Railway, not far from Truro, was almost wiped out, seventeen important buildings being destroyed. Rain is now falling, but there has been a long period of drouth, and a great deal of forest property will be destroyed.

The Truro Knitting Mills has purchased a site for its new factories. The site covers thirty acres, and has a frontage on the I.C.R. of over one thousand feet.

Nova Scotia is interested in the possibilities of selling

potatoes to Mexico. The Maritime Provinces produce about fifteen million bushels of potatoes a year, and heretofore our export has been principally to the United States and the West Indies. The consumption in Mexico is not very large, but it could be encouraged, and prices are good.

Halifax, N.S., 4th September.

* * *

MONTREAL'S GROWTH.

In a recent mammoth issue of the Montreal Herald are to be found a number of statistics about Montreal of to-day. Her area is ten square miles; population, 294,000, or with suburbs about 400,000. There are 51,000 residences, 9,125 stores and offices; total buildings, 61,125. Of water mains the extent is 215 miles, and of sewers 185 miles, of which five miles was built in 1904. The daily supply of water ranges from 27,000,000 to 31,000,000 gallons. There are 860 streets in the city and its suburbs. The valuation for assessment is $206,856,475, and the cost of administration, including interest on debt (the average rate of which is 4½ per cent.), was $3,067,961 in the year 1904.

The exemptions from taxation in the city are very large, owing to the great extent of church property, especially such as convents and academies belonging to the Roman Catholic Church. This is seen by comparing the amount of exemptions, $42,911,815, with the total assessed valuation of $206,180,000. This is in thirteen wards and the following outlying districts viz.: Hochelaga, St. Jean Baptiste Village, St. Gabriel, Duvernay and St. Denis. The number of buildings erected in the last three years has been very great, as the following table on the value of construction work done will show:

Year.	No. Buildings.	Value.
1904	1,335	$4,396,484
1903	1,010	4,094,596
1902	826	3,089,734
1901	443	2,568,372
1900	331	3,089,403

There are no fewer than 860 streets in the city and suburbs. The number of policemen is 454 and of firemen 300.

* * *

PROGRESS OF MOTORING.

The motoring world is an enlarging world. We read without surprise that the number of automobiles registered in Britain up to 1st July last was 31,129, which is an increase in twelve months of 12,789. Besides these there are 868 heavy motor cars, registered under the new Local Board regulations. Again, there are the motor-cycles, which number 34,706, so that the whole number of electrically driven vehicles in the United Kingdom was 66,703 at the 1st July, showing an increase over the preceding year of more than 67 per cent. In France, of course, autos are common, we are not told how numerous, and in the United States they are growing in number day by day.

By comparing the figures of the latest three fiscal years it may be seen that there has been a steady export of American-made motors. In 1902-3 their value was $1,207,065; in the next year, $1,895,605, and last year $2,481,243. We find in the September issue of "Motor," the national monthly magazine of motoring, accounts of assemblages in August of motor-cyclists at Waltham, Mass., of automobile dealers at Buffalo, of motor car makers at Chicago and at Niagara Falls. Then again at Detroit we hear of the semi-annual meeting of the Motor and Accessories Manufacturers on August 3rd, which was attended by sixty-five members. The association decided to show at both the New York shows and at the Chicago show. A permanent office with a salaried secretary is to be established shortly.

It is good to find that, when these new and popular travelling machines are so much in use in commerce and for personal comfort of the rich they are sometimes used also to give pleasure on a large scale to invalids and children. At Buffalo, a few weeks ago, a treat for orphan children was arranged. It was managed by the officers of the Automobile Club of that city. Over one hundred and forty motor cars and trucks were in line on that occasion, carrying over eight hundred children from the various institutions. At the city hall the parade was reviewed by the mayor and city officials, after which the games and festivities were wound up at Athletic Park. There appears to be a great future in store for these swift-running carriages. And it is very desirable that in crowded communities there should be plain and strictly enforced rules for their careful use.

* * *

LIFE INSURANCE NOTES.

An American journal learns that the new management of the Equitable Life has decided upon the readjustment of commissions on the various policy forms of the society so as to adjust the allowances on annual and five-year dividend policies to those heretofore paid on deferred dividend policies.

The National Fraternal Congress of the United States will meet in Montreal in 1906, for the first time in Canada. The cities of Minneapolis and Chicago wanted the gathering, but this year's congress at Mackinac Lake decided in favor of Montreal. To Mayor Laporte and the Business Men's League of Montreal is probably due this promise of the gathering of 600 persons in our chief city in 1906.

A conference on the subject of Industrial Insurance was held on Tuesday to Friday of last week at Detroit. Mr. H. G. B. Alexander, general manager of the Continental Casualty Company, of Chicago, presided. The following papers were on the programme: "The Insurance Lapse (An Analysis)," William H. Jones, Equitable Accident Company, Boston; "Thoughts on Industrial Health and Accident Insurance," Louis H. Fibel, Great Eastern Casualty and Indemnity Company, New York; "Committee on Law: Its Necessity, etc.", John J. Lentz, Columbus, O., and George E. McNeill, Massachusetts Mutual Accident, Boston; "Claim Centres," M. K. Gordon, North American Accident, Chicago; "Premium Payments and Advance Settlements," W. H. Chatfield, Claim Examiner the Phœnix Accident and Sick Benefit Association, Detroit; "Disabilities": Immediately Disabled - partial Disability, Total Disability, L. E. Brown, Continental Casualty Company, Chicago; "Law Suits," F. S. Dewey, secretary National Casualty Company, Detroit; "Indemnity for Illness," J. A. McCoy, Claim Adjuster United States Health and Accident Insurance Company, Saginaw.

It is often said by scoffers, or by persons who have given no thought to the subject, that life assurance agents and writers cause needless "scares" by their frequent warnings to intending assurers against putting off insuring their lives. We have just read in a western paper two striking instances of sudden deaths without the insurance that was *intended* to be placed. In July last, Mr. J. W. Humphrey, general agent for the London Life Assurance Co., canvassed Mr. Albert Hill, of Colchester, Ont., for insurance, and about the same time placed a risk on his employer, Andrew Brimner. There was an understanding when this risk was written that Mr. Hill would take out a policy at the same time, but owing to the illness of his child that day the matter was postponed until the next time Mr. Humphrey should come to the village. Imagine the solemn surprise of that official when he reached the village last week with the expectation of closing the matter, to find that Mr. Hill had died that same morning, from an injury received by accident in the house on which he was working. Nor is this the only instance of the kind in the experience of this agent. Darry Halstead, of the same place, had arranged to insure his life with Mr. Humphrey some months ago; but before the matter could be closed the sudden death of Halstead took place. Truly, delays are often dangerous.

FIRE INSURANCE NOTES.

Edward Atkinson, the Boston expert on fire insurance, has been prophesying that there will be within the next few years another great fire, attended by loss of life, in the City of London. As regards the mechanical appliances employed by the London fire brigade, Mr. Atkinson gave it as his opinion that England is far behind the United States. "Your appliances are mere toys," he remarked. "I read of your having an engine which can throw a jet of 500 gallons a minute, but that is not enough. I have not seen a single standpipe in any street here."

The president of the Home Insurance Company writes at the end of August to the New York Chronicle about fires in barns caused by lightning. In four years these were losses sustained by that company in its western field: In the year 1900 losses on barns caused by lightning were 43 per cent. of the whole number, and the losses on all classes of risks caused by lightning were 34 per cent. In 1901 the figures were 41 per cent. on barns and 38 per cent. on all classes. In 1902 the figures were 40 per cent. on barns and 38 per cent. on all classes. In 1903 the figures were 49 per cent. on barns and 36 per cent. on all classes, and in 1904 the figures were 49 per cent. on barns and 35½ per cent. on all classes. These figures show, says Mr. Snow, how large a part lightning plays in farm underwriting.

The quarterly bulletin of the National Fire Protection Association, discussing the hazards of shoe factories, summarizes them in the order of their importance. First the hazard of rubber, cement and naphtha; the hazard of spontaneous combustion of cutting board scrapings and various accumulations of waste, and the hazard due to the boiling over of wax pots on various stitching machines. Out of eighty reported shoe factory fires in sprinklered buildings, 42 per cent. were due to naphtha fumes and open lights; 16 to 18 per cent. to spontaneous combustion or some unknown cause, and 5 per cent. to the boiling over of wax around stitching machines. It is well that these statistics should be known to our manufacturers of shoes. There are several of the above-mentioned causes which would hardly be considered grave ones if such a record of disaster could not be traced to them.

* * *

—The output of gold from Nova Scotia mines last year is given as only half that of 1903. According to the Halifax Herald, this reduction in the output and the decline in gold mining activity is due largely to changes in the laws and regulations of the Province. Formerly the man who took up quartz areas was compelled to keep at work on them or the leases would lapse. Now the lessees can hold the areas for an indefinite period for speculative purposes by paying a small annual rental. The result is that while the Government gets as much or more revenue the development of the field and operations of a mining nature generally are more languid.

* * *

—Exports of cheese by the Gulf of St. Lawrence from Montreal to Liverpool, Manchester, Glasgow, London, Leith, Newcastle and Bristol amounted from 1st May to 26th August to 1,176,643 boxes, as compared with 1,075,503 boxes in the corresponding period of 1904. and 1,449,566 boxes in the like period of 1903. Last week's shipments were 86,896 boxes. There went by Portland 9.897 boxes. Of butter, the total shipments for the navigable season have increased greatly. They were in 1903 only 168,594 packages, in 1904 had increased to 256,736 packages, and this year they are 353,611 packages, all of which went to London, Liverpool, Glasgow and Bristol.

* * *

—The American Society for Municipal Improvement is holding its annual meeting in Montreal this week, beginning on Tuesday, the 5th September, and lasting five days. Two hundred and fifty delegates are expected. Two New Yorkers are to give papers on subjects connected with the experience of that city in various directions, and there will be papers upon macadam pavements, paving materials, "The Cost of Collecting and Disposing of Garbage," by the city engineer of Erie, Pa.; "Sewage Disposal," by the city engineer of East Orange, N.J.; electric lighting, etc. Some seventy-five delegates from Canada are expected, and twice that number from the States.

* * *

—Woonsocket had for a long time a chief of police, one Alf. Church, noted for his bluntness and straightforwardness. One day a grocer went to Alf. for information about a certain Joe White, who had applied for credit and a book at his store, and the following dialogue ensued:—"Good mornin', Mr. Church." "Mornin'" "Do you know Joe White?" "Yes." "What kind of a feller is he?" "Putty fair." "Is he honest?" "Honest? I should say so. Been arrested twice for stealing and acquitted both times."—Syracuse Journal.

* * *

—The English people are slow to change their opinions. Having become, ages ago, fixed in the idea that Canada, with all her vastness of space and variety of climate is always and everywhere as cold as Greenland, they pay little or no attention to the thousands of Europeans who are finding the Dominion a land of prosperity and freedom. A recent London Tatler has what to the English mind will seem a clever epigram. Referring to Lord Minto's appointment as Governor-General of India, it gives a picture of Lady Minto and her children in their garb as Canadians. This picture presents them as clothed in furs, and is entitled "From Greenland's Icy Mountains to India's Coral Strand," which means, of course, the transition from the excessive cold of Canada to the equally excessive heat of India. This may be cleverness, but it is cleverness without intelligence.

* * *

—Business men in Toronto are accustomed to say that most of the city aldermen are not above the calibre of village councillors in matters of commerce and finance. This opinion would be confirmed if it were found, as we trust it will not be, that the majority approve the notion of the city carrying its own fire insurance risks, which notion was suggested to the Board of Control last Saturday by a report from the city treasurer. This official reported that during the past ten years the city has paid insurance premiums of $149,157, and has received in payment of losses from the insurance companies $64,069. If a man or a set of men are shortsighted enough to rely upon the average of one year or ten years as a proof that insurance companies can be done away with and municipalities can with profit do their own insuring, he or they can find plenty of instances to cure them of the notion. Have the people of Toronto so soon forgotten the conflagration hazard in view of the devastating scenes of April, 1904?

* * *

—If there is one thing which the manufacturer desires especially to ascertain, it is a correct valuation of his plant, or his office buildings and fixtures. The value of such specific knowledge will upon reflection be clear. There are many connections in which it would be welcome, such as in case of fire. How it would assist in the adjustment of losses, etc.! How convenient in case of death of a partner or dissolution of a firm! For several years now a number of appraisal companies have been operating in the United States, some of whom have Canadian representatives, and they picked up quite a lot of business on this side of the border. Recently, however, there has been incorporated in Montreal the Canadian Appraisal Co., which proposes to render to Canadian manufacturers such service as is usually given by appraisal companies to their clients. The directorate is composed of thoroughly representative men, men who will inspire confidence. They are as follows: F. W. Thompson, president; W. M. Doull, first vice-president; H. Seymour, second vice-president; L. G. Guest, secretary-treasurer; Frank Paul, William Hanson, D. Lorne McGibbon. Mr. T. L. Maitland, the general manager, has had a long and practical experience in similar work, so comes to his task well fitted for the work in hand.

Mercantile Summary

Boring of further oil wells in the townships of Mersea and Tilbury, with varying results, continues to be reported by the Leamington Post.

Among the new companies announced by the Ontario Gazette is the Sucker Gas & Oil Co., of Anderson, Limited. Head office to be at Amherstburg, capital $250,000; directors, J. G. Mullen, H. G. Duff, W. H. McEvoy, J. A. Auld, W. H. Gatfield, J. Anderson, H. Clay, and E. Winters.

A report to the State Bureau of Statistics has it that the population of Massachusetts is 2,998,958. This is an increase of 498,775 or 66 per cent. over 1895, when the last official census was taken. Boston's population is 593,598, an increase of 96,678 in the past ten years, or almost 20 per cent.

The Bell Telephone Company has lately completed an additional copper metallic long distance line from Winnipeg to Portage la Prairie. The company will also have completed this month a metallic line from Winnipeg to Carman which will give a long distance metallic circuit direct from Miami to Winnipeg.

Incorporation appears to be in the air in the West. We are informed that Elmwood and Elkhorn in Manitoba will both be incorporated into villages in time for the December elections. The village of Carman, Man., is to be incorporated into a town and enlarged by the addition of a small section of the rural municipality of Dufferin.

People need to be reminded every little while of the causes of fire. Montreal fire chief's report for last month gives seven cases of fire arising from children playing with matches, eight from electricity, four from hot ashes, coal oil stove explosions and gasoline ditto three, lamp explosions four, spontaneous combustion six, chimneys fourteen, hot ashes four, sparks four.

It is reported that a party of United States investors will spend $1,000,000 in developing the Dominion Copper Mines at Phœnix, B.C. Last week the property was visited by Maurice Untermeyer of the New York law firm of Guggenheimer, Untermeyer and Marshall; Senator Warner Mieller, of New York, and several others. As a result of their visit it is understood to have been decided to spend the sum referred to.

In Montreal building operations for August exceeded the total of the same month last year by $130,000. During that month ninety-one permits were issued for new buildings, for a value of $355,455, and sixty-two permits for alterations, for a value of $93,646. The total value of permits issued in the month was thus $449,101. The permits for new buildings in August, 1905, were higher than for the same month last year by $103,645. For alterations the increase is $32,756. On both together $136,401.

TRUSTEE AND ESTATE INVESTMENTS

WRITE US FOR BOOKLET AND LATEST LIST OF OFFERINGS.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST. EAST TORONTO.

Mercantile Summary.

The assignment is recorded of C. T. Darveau and Arthur Bolduc, doing business at Quebec as the Quebec Paper Bag Co. Their liabilities will figure, it is said, at about $21,000.——The Misses Darveau & Delisle, doing a millinery business in the same city, have also assigned.

August was another big month in respect to Soo Canal traffic. The total net tonnage passing through the canal for the month was 6,327,495, an increase of about 700,000 tons over last August. The total for the season to date is 26,164,590 tons, or nearly double the tonnage for the same period last year.

H. E. Montgomery, of Fort Coulonge, Que., who within the last few weeks sold out his stock to Pitt, Kerry & Co., is asking his creditors to accept 50% of liabilities amounting to about $3,000.——An assignment has been made by J. H. Blais, in the tinsmithing business for several years at Napierville, Que. This is the result of a couple of recent suits entered against him for past due balances.

A firm of general storekeepers at Beebe Plain, Que., on the Vermont border, have assigned. The firm in question is M. P. Dixon & Co. The business was started only last year under style of Merriel & Dixon, a dissolution taking place last June, when Dixon arranged to continue the business alone under the above style. He was formerly an employee of the Boston & Maine Ry., and has apparently not found storekeeping the easy job he figured on, though it was claimed that quite a fair capital was put into the venture.

In July last, J. E. Corbett, general merchant, Harbor au Bouche, Antigonish County, N.S., was reported as asking an extension of time, which arrangement has not afforded the relief desired, and he is now trying to put through a compromise arrangement at the rate of 50 cents on the dollar. He owes $6,700.——Eli Archibald, for 35 years in the harness-making business at Truro, N.S., has assigned to J. L. Sutherland. He got into deep water several years ago through giving accommodation paper, and has never recovered himself.

The output of the mines at Rossland, B.C., for the eight months of the year ending August 31, was 225,653 tons, according to a press telegram, and should the shipments keep up the total shipments for the year should reach 348,479 tons, a slight increase over 1904, when it was 342,352 tons. It will be somewhat larger and should reach at least 360,000 tons as the mines will produce more in the last four months of the year than they did in the first four months, and the Crown Point, which has not produced any ore for several years, sent a carload to the smelter last week, which will be followed by others. The production of the mines for the week ended 2nd September was 6,540 tons.

AChange in the Trusteeship.

Whether of a Will, Marriage Settlement or Bond Issue, is a troublesome and expensive matter.

Where private trustees are appointed such changes are inevitable.

The Trusts Company alone enjoys continuity of tenure, fixity of residence and permanent records.

Mercantile Summary.

It appears that the concrete work on the Trent Valley Canal at Kirkfield has been found defective. It is reported that the leakage through the concrete amounts to a million gallons per hour, and that the bridge company which has the contract for the iron work is unable to use satisfactorily the hydraulic power necessary for the work of construction. Pressure is being brought to bear looking to a thorough investigation and the placing of the blame for such seriously defective construction where it belongs.

The number of commercial failures last week in the United States, as reported by R. G. Dun & Co., was 222 against 232 the previous week, 214 the preceding week, and 222 the corresponding week last year. Failures in Canada last week numbered 19, against 26 a week ago, 27 the preceding week, and 33 last year. Of failures last week in the United States, 72 were in the east, 57 south, 67 west, and 26 in the Pacific States, and 62 reported liabilities of $5,000 or more. Liabilities of commercial failures in the United States reported for August to date are $1,697,492, against $1,598,000 in 1904.

According to latest reports the Leyland steamer "Virginia," which ran ashore in the River St. Lawrence in a fog on Friday, is considered safe. She is ashore on flat and muddy ground in the river. Lighters are busy removing the cargo, and it is fully expected that she will be floated in four or five days. The Allan Line turbine steamer "Victorian," which also ran aground last week between Three Rivers and Quebec, outward bound, is in much the same position. It is expected that she too will be gotten off in the course of a few days. Her cargo is being lightened, and she has a dozen feet of water in her forehold. The "Virginia" which was inward bound, has on board heavy consignments of glass, cement, iron and white lead for Montreal firms, and firms throughout Western Canada. She struck bottom at Crane Island.

The Glove and Mitt Manufacturers' Association passed a resolution at their third annual meeting, held in the Board of Trade building, Toronto, on Tuesday, to the effect that, in view of the strong increase in the cost of all raw material, it is absolutely necessary to make an advance of from 10 to 15 per cent. in the price of gloves for the coming season. The executive committee was instructed to watch the interests of the glove trade in connection with the approaching tariff enquiry. The trade is satisfied with the present tariff, and desires no changes. The meeting was well attended and thoroughly representative of the trade. Officers were elected as under: President, W. A. Storey, Acton; first vice-president, J. T. Westgate, Montreal; second vice-president, H. G. Smith, Dundas; secretary-treasurer, W. H. Whiteside, Delhi.

Mercantile Summary.

The Kinmount Creamery Company's factory was destroyed by fire on the 5th inst. It was valued at $7,000, and was not insured.

It is reported that Mr. Wm. B. Wood, Registrar of Deeds for the County of Brant, has resigned his position to return to mercantile life, claiming that he can more than double his present income by doing so.

The Minister of Agriculture for Quebec province, Hon. A. Turgeon, has returned from a visit to St. Malo, France, and the exhibition at Liege, Belgium. He says the Liege Exhibition is a very instructive one.

The London County Council has arranged to take over the North Metropolitan Tramways Company for a total payment of $2,000,000, including right of way and rolling stock. The surrender of the lines is to take place next March.

The second steamer for Mexican ports, the Elder-Dempster liner "Dahomey," left Montreal on Monday last. Her general cargo was a large one. It included paving stones for the Havana Street Railway, box shooks and hay. She had 26 saloon passengers.

Seventeen carloads of coal have arrived from the Cumberland Coal & Railway Company for the Dominion Iron & Steel Company, at Sydney, C.B. This is the first shipment of a sample order of one thousand tons. The coal will be used as a test in the manufacture of coke. Should it turn out a better product than Glace Bay coal it is probable that large quantities of it will be used for that purpose.

At St. Eustache, in the county of Two Mountains, some twenty miles southwest of Montreal, a fire broke out on Monday night last in the factory of the St. Eustache Canning Company. The cause was the explosion of a gasoline solder machine. The building was destroyed. Besides the building, twelve thousand cases of canned goods were also lost. The loss is estimated at $42,000, and the insurance $10,000. Nearly a hundred people are thrown out of employment.

A movement is on foot, so the Winnipeg Free Press understands, looking to the cutting of a waterway through the upper peninsula of the State of Michigan by which Lakes Superior and Michigan will be connected by a route three hundred miles shorter than the present. Should the United States Congress act favorably on the project, it would mean that there would be no possibility of recurrence of the blockades that have hampered the lake traffic at the Soo. At least such is the contention. The project would seem to one who looks at the map to mean a waterway which would utilize Manistique Lake and Manistee River, and some one of its various branches. These are some 140 miles west of the St. Marie River.

TENDERS

FOR

Binder Twine Plant AND Property

Tenders will be received by the undersigned for the following property:

The whole plant, including Factory, Warehouse, Machinery and 16 lots. Tenders must be in the hands of the undersigned by 8 P. M. Sept. 25th, 1905.

The property consists of a brick Binder Twine Factory and Machinery and Plant with the capacity of three tons of twine per ten hours, with the necessary Spinning and Winding Machinery. There are also two boilers and an Engine of 100 horse power capacity, a Frame Warehouse — capacity one thousand tons — and 16 lots situated in the centre of the City of Brandon. The Plant has most convenient railway facilities for shipping and receiving of goods. This plant is situated in the midst of a great consuming population which is annually increasing, and the market for the product of this factory is at its doors.

Each tender must be accompanied by an accepted cheque, payable to the Bank of British North America, equal to 10 per cent. of the amount tendered, and which will be applied upon the purchase money in case the tender is accepted, or will be forfeited to the Company in case the tender is accepted and the purchase for any reason is not carried out by the Purchaser. Each tender must state terms of payment proposed, and any other special terms he desires. Rate of interest will be 6 per cent. upon deferred payments.

Tenders will be received for the whole or portions of the property. The highest or any tender not necessarily accepted.

For further particulars, terms and conditions apply to

The Brandon Binder Twine Co., LIMITED,

P. O. Box 923,

Brandon, Manitoba.

Ellen Richards, of Halifax, hatter and furrier, has made an assignment to the official assignee. A meeting of her creditors will be held on 7th September.

Trusts

This Company executes trusts of every description, its duties being performed under the supervision of a Board of Directors of representative men of the highest business standing and experience. I

Factory at BRANTFORD.

Mercantile Summary.

The annual general meeting of the Quebec Bridge and Railway Co. was held on Tuesday last, and presided over by Hon. S. N. Parent. The same board of directors was re-elected except Mr. Beckey, who was replaced by Andrew Allan as a Montreal representative.

The annual report of Chief Campion of the Chicago fire department shows that of the 8,890 alarms of fire to which the department responded last year, nearly one-sixth were false. Hereafter, the practical jokers will be severely dealt with when found out.

Mr. Archibald Blue, Chief Census Commissioner for the Dominion, is in Winnipeg for the purpose of securing information preparatory to the taking of the census of Manitoba, Alberta, and Saskatchewan. This census will be undertaken some time in June of next year.

We recently noted the failure of M. Shriaberg, doing business at Montreal as the British Skirt Mfg. Co. He has now arranged a compromise at the rate of 50 cents on the dollar, secured, liabilities being about $10,000.——Albert Pesant, a farmer's son, who began as a retailer in the grocery line in Montreal last fall, has already come to the end of his tether, and his estate is in an assignee's hands.

From Brockville we hear of a couple of failures. H. J. Robinson & Co., in the hotel-keeping line, and composed of the widow and son of the late Amos Robinson, have assigned. Liabilities are reported at about $5,000, partly preferred.——F. W. Robinson, who has been in the baking business in the same town for the past five or six years has also made an assignment, with small liabilities.

The following list of patents recently granted to Canadian inventors in Canada and the United States is furnished us by Messrs. Fetherstonhaugh & Co., Toronto: Canadian Patents—P. Perdue, Clinton, seeding drills and cultivators; L. H. Morgan, Brampton, protective shields for water pneumatic tires; W. S. Cooper, Galt., ignition operating devices for reversing gas or gasoline engines; C. Dandelin, Montreal, apparatus for use in cleaning buildings; V. Filtreau, Montreal, rotary engines; G. S. Cushing, St. John, N.B., processes for making wood pulp; W. J. Hastings, Watford, acetylene gas machines; H. Shippling, Tavistock, dumping vehicles; A. Jobbern, Hamilton, Ont., scales; E. Large, Calgary, Alta., pneumatic tires; J. M. Bryant, Windsor, Ont., typograph machines; W. R. Wilson, Toronto, coal mine tipple and screen plants; G. E. Gilbert, Peterboro, letter and document files and binder spindles; M. H. Peirce, Peterboro, grave vaults; G. Spearman, Winnipeg, combined traction wheels and water tanks; J. A. Whyte, Toronto, electric signalling and pneumatic train control systems; H. Balm, Toronto, paper boxes; W. Richmond,

AGENTS WANTED in every unrepresented District in Canada.

Debentures For Sale

The undersigned is prepared to receive tenders for the purchase of one hundred and fifty thousand dollars ($150,000) of Drainage Debentures of Drainage District No. 2 in the Province of Manitoba, such debentures being guaranteed by the Province of Manitoba and issued under the provisions of "The Land Drainage Act, 1895." The debentures will be in denominations of $1,000 each, payable in thirty years from the

15th day of September, 1905

and bear interest at 4 per centum per annum, payable half-yearly at the Union Bank of Canada, Montreal. All offers must be addressed to the undersigned, marked "Tenders for Drainage District Debentures" and must reach this office not later than the 23rd day of September, 1905. Delivery and payment of debentures to be made in Winnipeg.

J. H. AGNEW,
Provincial Treasurer.

Winnipeg, Aug. 18, 1905.

DEBENTURES

SEALED TENDERS addressed to undersigned will be received up to noon of Monday, September 11th, 1905, for the following debentures of the City of Niagara Falls namely:

$6,962.62 twenty years 5%, issued for permanent walk purposes, dated August 15th, 1905.

$10,022.37 thirty years 5%, issued for sewer purposes dated August 15th, 1905.

Said Debentures, Principal and Interest, are payable at the City Treasurer's Office, Niagara Falls, Canada, annually.

Purchasers to pay accrued interest from Aug. 15th, 1905.

Further particulars can be obtained on application.

Highest or any tender not necessarily accepted.

JOHN ROBINSON, City Clerk.

Niagara Falls, Can., Aug. 22, 1905.

London, threading dies; R. H. Beal, Lindsay, process of manufacturing moccasins; T. Bennett, Toronto, temporary grates; C. S. Botsford, Peterboro, cloth-measuring machines; W. J. Clokey, Toronto, harvesters; H. W. Derken, Montreal, skates; G. F. Pooley, Montreal, pyjama coats; J. Metivier, Que., boots; G. P. Eastman, Toronto, cloth cutters; W. H. Scharf, Montreal, linotype machines; J. J. Timmons, Quebec, beverages; J. E. Keenan, Owen Sound, pail-graining machines; F. G. Campbell, Montreal, non-refillable bottle stoppers. United States patents—Thos. V. Challinor, Chatham, Can., tremolo for organs; Chas. N. Choate, Windsor, Can., adjustable hoe; Enon F. Crawford, Nelson, Can., clip for traction ropes of aerial tramways, automatic bucket-loader for aerial tramways; Hugh H. Fletcher, Toronto, game apparatus; Geo. G. Glenn, Hamilton, tomato-peeler; H. E. McLean, Manilla, Can., governor for engines; J. F. Watson, Ottawa, apparatus for signalling by reflecting the rays of the sun or other light; Jas. C. Anderson, Victoria, Can., jar; Wm. G. McLaughlin, Walkerville, compound railway rail; A. S. Milne, Leaskdale, Can., manure horse-fork; Eli E. Sager, Vancouver, electrical water heater.

⁂

WALL STREET OPINION.

Here is what Henry Clews has to say on money matters and the war in his circular of 2nd September:

Two important influences of the recent enthusiasm and strength in the stock market have become established facts: a formal agreement between Japan and Russia for peace has been reached and the great grain crops of the country have been secured; and the early favorable predictions in the latter instance have more than been justified. Both these influences will remain important factors in the financial situation for some time; but their formal consummation removes them as favorable influences from the immediate speculative situation—renders them, in fact, bases for profit-taking sales by the professional contingent in the market. Professional Wall Street deals in the future; it discounts the influence for good or ill of future happenings, and when these happenings actually mature it promptly closes out its commitments—usually at a profit—by turning them over to interests who are not so farsighted. The market's reception of the peace agreement is one of the most striking of recent illustrations in this direction; but it is by no means surprising, in that professional Wall Street merely used common sense and operated on it.

. . . . . .

The monetary situation in connection with the palpably high range of current quotations for securities becomes the pivotal influence of the immediate situation. The currency movement to the West this week has been on a sufficient scale to indicate at this early date that New York bank resources will be severely taxed during the next few weeks; and that any unusual demand for banking accommodation resulting from speculative activity would mean an advance in money sufficient to constitute a distinctly adverse market factor. The high eminence quotations have reached does not, in a broad sense, represent general outside speculation or investment; the important speculative interests have been easily able to put prices up and establish for themselves large paper profits. They have received what may be termed negative assistance from investing interests generally as a result of general enthusiasm resulting from a promise of unexampled agricultural prosperity; this assistance has manifested itself more in an indisposition to sell than the development of an outside investment buying movement. The prime factor remains, therefore, that the large market interests are holding large amounts of securities which they are desirous of distributing as soon as sufficient buying power is available.

. . . . . .

The declaration of peace between Japan and Russia will be far-reaching—in my opinion it is the last of all great wars. The Hague mode of settling disputes between nations will hereafter supersede the sword. The war will teach important lessons to mankind, resulting in a permanent peace the world over. The moral effect of a small nation like Japan achieving its marvellous victories on land and water over what was supposed to be so powerful a nation as Russia will make emperors and kings think twice in the future before deciding to go to war, even with a small nation. The "Open Door" is now assured—permanently assured—which means a commercial struggle between nations for supremacy in providing for the wants of two-thirds of the population of the world.

⁂

—Mrs. Youngman—The idea! It's very funny you can't give me any money. My husband has an account here. Bank Cashier—I know, madam, but if your husband wanted you to have some money he would have given you a cheque. Mrs. Youngman—But, my gracious! if he's got an account here can't you charge it?—Catholic Standard and Times.

Town of Midland Debentures.

Sealed tenders, addressed to the undersigned, will be received up to Six o'clock Tuesday, September 19th, 1905, for the following debentures of the Town of Midland, viz.:—

$12,000—Forty years, (by Special Act) 4½%, issued for sewer purposes, and dated 29th December, 1904.

$10,000—Thirty years, 4½%, issued for the purpose of purchasing a site and erecting a High School building thereon, and dated September 6th, 1904.

$10,000—Thirty years, 4½%, issued for the purpose of paying off the present floating indebtedness of the Town (Special Act, 1905), dated June 1st, 1905.

The first two lots guaranteed by the County of Simcoe.

The highest or any tender not necessarily accepted.

Bids to include accrued interest from date of Debentures.

T. I. TRUEMAN,
Town Clerk.

Regarding Canadian Investments

The "Manitoba Free Press" for February 11th, 1905 contained the following reference:—

"*Millions of dollars of Eastern money are*
"*invested on Mortgage Security in the*
"*West for the simple reason that it has*
"*been found profitable.*"

All Investments of the Great West Life Assurance Company are made in the West, thus securing for Policyholders unusual advantages in the direction of low premiums and high profit returns.

CIGARETTES
STANDARD OF THE WORLD
SOLD BY ALL LEADING WHOLESALE HOUSES.

—There emanates nominally from Ottawa and is published in the Montreal Gazette, of Wednesday, an altogether incorrect version of a difference which arose between certain officers and men of the British Navy and the Toronto Exhibition authorities. The despatch in question said that the "men were camped next to the elephants, poorly fed, and treated as part of the circus performance." Further, that "no arrangement had been made with the King Edward Hotel people regarding the board and lodging of the officers, and when they proposed to leave for the train on Thursday evening the hotel folk intimated that their board bill was not paid." It is not true that the men were poorly fed; and it was their own fault by not being present on time according to their agreement, that they were put to perform where they did on one day. It is not true that their board was not arranged for at the hotel. What the Toronto Exhibition people did object to, however, and refused to pay, was the champagne bill of certain officers who were "having a good time."

* * *

TORONTO MARKETS.

Toronto, 7th September, 1905.

Fruit.—There is a fair local improvement in trade generally, and the indications are for a considerable increase in business at an early date as the autumn progresses. In provisions, vegetables,, and fruit the demand has been heavy this week, owing to the large number of visitors in Toronto, but heavy supplies have in almost all cases kept prices from being inflated. Fruit especially is coming along in large quantities every day, and as a result published prices are apt to be misleading, as they often vary several times in a day. The opening of the Exhibition seems to have started business after the usual holiday dullness, and there is an all-round feeling of confidence and buoyancy among all classes of business men which augurs well for a good fall trade.

Breadstuffs.—The markets are quiet, and prices generally have a lower tendency. No. 2 red and white wheat (Ontario), is quoted at 74c., West. Manitoba No. 1 is quoted at 98c.; No. 2 at 95c.; and No. 3 Northern at 85c., lake ports. For future delivery the new crop is quoted for No. 1 Northern at 85c., for No 2 the price is 82c., lake ports. Ontario flour for export, 90 per cent. patents sold at $3, buyers' bags, east and west, and offerings were liberal at $3.10. For Manitoba prices are unsteady and lower; first patents are quoted at $5.15 to $5.30; second patents at from $4.85 to $5, and bakers' at from $4.75 to $4.85.

Millfeed.—Ontario bran is worth per ton $11.50 to $12, at outside ports; shorts are worth from $17 to $18 per ton. Manitoba bran is easy at from $16 to $17, and shorts we quoted at from $19 to $20, Toronto, No. 2 oats are easy, with sales reported at 27 and 28c. West, No. 3 barley, extra, sold outside at 42 and 43c. Rye is dull at 55c. outside. New crop peas are quoted at 65c. outside, Canadian corn is nominal; American No. 3 yellow is quoted at 62c.; No. 2 yellow at 62½c., lake and rail freights.

There is no change in rolled oats; the price is $4.75 here for barrels in car lots on track; for bags, $4.50; for broken lots here the price is 25c. more, and 35 and 40c. outside.

Dairy Produce.—There is a good demand for butter, and prices are steady and unchanged. Quotations are:—creamery, prints, 22 to 23c.; solids, 21 to 21½c.; dairy pound rolls, good to choice, 18 to 20c.; medium, 17 to 18c.; tubs, good to choice, 17 to 18c.; inferior, 15 to 16c.

Cheese.—There is also a good demand for cheese, quotations being steady and unchanged at from 11½ to 12c. per lb., with no surplus stock on hand. Eggs, receipts are large, but prices are pretty well maintained at from 17 to 18c.; splits are 14 to 15c. per dozen.

Potatoes.—On larger receipts the prices are easy at from 50 to 55c. per bushel.

Hog Products.—The supply of dressed hogs is fairly good and prices keep unchanged. There is a liberal enquiry for cured meats at these prices. Bacon, long clear, sells at 11½ to 11¾c. per lb. in case lots; mess pork, $18; short cut, $22. Hams, light to medium, 14 to 14½c.; do., heavy, 13c.; rolls, 12c.; shoulders, 11c.; backs, 15 to 16c.; breakfast bacon, 14½ to 15c. Lard is quiet, and is unchanged at 10 to 10¼c. for tierces; 10½c. for tubs, and 10¾c. for pails.

Groceries.—A fairly good movement exists, but nothing at all out of the common, with no quotable changes to report. Quotations for sugars are as follows. Montreal granulated, in barrels, $4.98; Acadia, $4.88; Ontario beet, $4.88; Phoenix, $4.88; yellow, $4.48 to $4.78. In bags, Montreal and Ontario Sugar Co., 5c. less than in barrels. Coffee is firm, with no upward tendency.

Paints, Oils, and Glass.—No change in prices has taken place during the week. Turpentine is steady; linseed oil is weak. Just now business is dull, but the outlook is excellent for a good fall trade. Glass is scarce in Montreal.

Live Stock.—Business is good at the Western Cattle Market; supplies are ample, and prices well maintained for all good to choice stuff. Cables from London quote Canadian cattle at from 10 to 12c. per pound; refrigerator beef is 9 to 10c. per pound.

⁂

MONTREAL MARKETS.

Montreal, September 6th, 1905.

Ashes.—Business in this line is practically dead at the present, receipts last week not reaching five barrels, and there are less than twenty barrels in store. Last transactions in first pots were at $5.05 to $5.07½; scoured pots about $4.50; pearls nominal at $7 to $7.25 per cental.

Dairy Products.—Last week's shipments of cheese abroad were comparatively small alongside those of the corresponding week a year ago, the figures then being 116,833 boxes, as against only 71,331 boxes this year, but the total exports for this season to date are still ahead of those for the like period of 1904, the figures at date being 1,247,974 boxes, as against 1,162,336 boxes at September 1st, 1904. Exports of butter last week were 28,157 packages, making the total for the season to date 381,768 packages, as compared with 290,276 packages same period a year ago. The cheese market is firm at 11⅝ to 11¾c. for finest Ontarios, and from 11⅜ to 11½c. for fine Townships. For choicest creamery butter the quotation is 22 to 22½c.; good to fine, 21½ to 22c.; dairy makes, 18 to 20c. per pound.

Dry Goods.—Sorting business in fall stuffs is thus far comparatively moderate, and the wholesale warehouses exhibit no special bustle at the moment, but with a revival of activity in city retail trade and a few cool nights a good many autumnal orders are looked for. Money comes in from the country fairly well. Domestic manufacturers of fine ginghams have just issued quotations for 1906 deliveries, the figures being practically the same as those of last year.

Groceries.—Under rather firmer conditions in the sugar market there is a more active demand at the refineries, but quotations are unchanged at $4.90 for standard granulated, with yellows ranging from $4.40 to $4.80. Molasses is dull and easy at 32c. for Barbadoes in round lots, with jobbers quoting 35c. Prices of new pack of tinned corn and

her complement of Valencia raisins, the second boat, the "Jacona," making the general round of Mediterranean ports. Latest cable quotations of fine Filiatra currants are 16s. to 16s. 6d.; fine Vostizzas, 18s. 6d. Orders for Valencia raisins are being placed in goodly volume, and the market has quite a firm tone. Samples of new Sultanas show excellent value. Malaga layers, for shipment by the "Jacona," are quoted as follows: London Layers, 5s.; Connoisseur Clusters, 6s.; Extra Dessert, 8s. 6d.; Royal Buckinghams, 10s. 6d., figures which are regarded as reasonably low.

Hides.—As anticipated last week, lambskins are now advanced to 80c. each. The receipts of beef hides are quite moderate, and all offerings are quickly absorbed by tanners. Dealers are buying at 11 to 11½c. per lb. for No. 1 hides.

Leather.—As boot and shoe manufacturers are now mostly busy on new samples, the movement in leather is only moderate, the very firm ideas prevailing as to values also having some effect upon the demand. The late advance in black leathers is firmly maintained, and for buff even higher figures are quoted, Quebec tanners now asking 16 to 17c.

Metals and Hardware.—Our full report of last week will fairly apply at date. Ingot tin is a little easier abroad, but hardly sufficient to affect local quotations, which are fairly steady at 36½ to 37c.; copper, 17½c.; lead, $3.75 to $3.80; antimony is still very scarce and firm at about 15c. Tinplates have not advanced as yet as some anticipated, and standard cokes are quoted at $3.65 to $3.75; charcoals, $3.90 to $4; Canada plates remain steady at $2.35 to $2.40; black sheets, $2.15. In domestic bar iron there has been no recent change, $1.75 to $1.80 being the general quotation; sleigh shoe steel, $1.95 to $2; round machinery steel, $2.50; cast steel, 7½ to 7¾c. In wire, nails, horseshoes, etc., there has been no recent change.

Oils, Paints, etc.—Turpentine is up a cent since last writing, being quoted at 90c. per gallon in single barrel lots. Linseed oil continues about steady at 49 to 50c. for raw, with the usual advance for boiled. Fish oils are little asked for; castor, 7½ to 8c. per lb. The "Virginia," ashore in the Gulf of St. Lawrence, has some moderate supplies of window glass aboard, which are badly needed, the market being practically bare of some sizes. White lead is quoted at $5.25 for chemically pure.

⁂

We have heard that the Winnipeg Rubber Co. have been awarded large contracts for their fire hose by the towns of Edmonton and Strathcona.

There is to be an exhibition at Macleod, Alta., on October 3rd and 4th, and races also. If one could go out there from Ontario it would doubtless be a pleasant and enjoyable visit.

Mr. Kelly, of Kelly Brothers and Mitchell, contractors at Winnipeg, tells the Vancouver World that his firm will start work very shortly on the new federal building, corner Granville and Hastings streets in the latter place. The building will be a handsome one; the probabilities are that it will be erected of sandstone from Harrington Island.

J. A. Turnbull, for many years general manager of the Acadia Sugar Refining Company, died at Halifax on Sunday last, aged 68. Mr. Turnbull went to Halifax from Greenock, Scotland, twenty-four years ago, to become manager of the old Nova Scotia Refinery, and when the change was made to the Acadia, he was appointed its general manager.

Among the new structures presently to be erected in Vancouver is a brick warehouse of eight stories, and 125 feet front, intended to be built on Water Street by Messrs. Kelly, Douglas & Co. On the front elevation two of the stories will be below the street level, forming a double basement. Heavy timbers and thick floors will be placed in the interior. A fire wall will divide the structure from front to back forty feet from the eastern line. Three elevators are to be installed. The estimated cost of the building is $75,000.

"MUST DIE TO WIN."

should you not outlive the term selected, will enable your wife and children, or dependent loved ones, "to win" a competence and thus protect them from the "cold charity of a pitiless world."

The Lunenburg fish firm of L. Anderson, which at one time was one of the largest in Nova Scotia, has also assigned to D. R. Clarke, of the Bank of Montreal. Like Black Bros. & Company, L, Anderson were largely indebted to the People's Bank.

A Mail special from Halifax on Thursday says that the large fish and former hardware firm of Black Bros. & Co., Limited, Halifax, has gone into liquidation. The bondholders of the firm are practically the Bank of Montreal, successor to the People's Bank of Halifax, to whom Black Bros. were heavily indebted. The court appoints William Duff, of Bridge Water, as receiver of Black Bros. The property affected is that of Black Bros. & Company's fish business and factory, located at Getson's Cove, Lunenburg County.

IS ANOTHER COAL STRIKE IMMINENT?

The great strike of several years ago in the Pennsylvania coal mines which caused so much suffering amongst not only the miners themselves but amongst the consumers, who were compelled to pay exorbitant prices for what little coal was available for consumption, was finally terminated, as we all know, after a most bitter and prolonged struggle by a working agreement between the operators and miners. This agreement expires in April next, and, although it has apparently served its purpose, yet there are rumors emanating from the coal fields that another great strike is imminent.

Although it is said that these rumors are disseminated by the operators throughout the trade for the purpose of inducing dealers to increase their stocks of coal at the very high winter prices, and thus make an unusually high profit out of the several millions tons of surplus coal which is available for immediate consumption, and, although President Baer, of the Reading Railway, and President Mitchell, of the United Mine Workers' Association, have made reassuring statements, yet it is admitted that there are certain demands which the mine workers will insist on in April next.

In the first place they want an eight-hour day; and, although the majority of the miners do not now work longer than that, yet dealers say that insistence on this demand by the miners will cause the price of coal to advance at least fifty cents per ton. If this advance occurs it is probable that the consumer will take a hand in the fight, and probably compel the settling of this question by arbitration rather than disturb the operation of the mines for any great length of time.

Then, again, it is questionable whether or not a demand of this kind is a legal one in view of the recent decision by the Supreme Court of the United States on the New York labor law, which was noted in our last week's edition. Apparently it is illegal for any body of men, be they organized as a trade union or as a State Legislature, to say that a man shall not work more than a given number of hours each day. It is against public policy to allow the personal freedom of the individual to be fettered by restricting his inalienable right to make whatever kind of a private contract he thinks advisable. However, in reality this practically could not be of much moment, because if the union says that one of its members shall only work eight hours a day, if he disobeys their mandate he will suffer materially from their displeasure.

Again, the miners will insist on the recognition of their union by the operators, while the operators say they will never submit to this; and it is this particular demand that may precipitate another strike in April next. It may seem rather absurd that the mine operators should be unwilling to recognize what we all know to be *de facto* true, namely, that such a union (the United Mine Workers' Union) really exists, but the recognition of the union involves much more serious consequences than would appear from the above. It involves the right of the union, once it is recognized by the operator, to negotiate as a union and not as individuals with the operators, and its right to insist on the operators making a binding agreement with the union as such in reference to points at issue, and it negatives the right of the operators to negotiate at all with the members of the union. The great advantage of this, of course, is that once an agreement is made with the union it can enforce the observance of that agreement equally on all its members, and thus be in complete control of the labor market; whereas if no such legal agreement existed between the operators and the union, the union could not compel its individual units to make contracts with the operators according to its regulations.

This is one of the points that every union always struggles hard for, once they have first settled preliminary questions with the employers in a previous strike. So it was in Toronto several years ago when the strike of the motor men and conductors of the Toronto Street Railway demoralized the street railway service for a length of time. After some violence a *modus operandi* was agreed on, and things went smoothly for a while. At the expiration of a year, however, the union makes a new demand—to be recognized, and another strike is only averted by the exercise of the greatest diplomacy on the part of the railway company.

It is the demand thus stated, therefore, which is most likely to force a coal strike in April, and, although a strike at that time would not work nearly as much damage as one in the early part of winter, yet if the men are satisfied with their present wages, hours of labor, and general treatment at the hands of the operators, and their walking delegates or chief muftis insist on such an immaterial demand as we have above referred to, and precipitate a prolonged strike as a result, the sympathies of the consumer and the general public will be entirely weaned away from the union, and quite justly so. The curse of the labor union to-day, for it has its proper field and functions to perform, is the paid agent who is not earning his bread by the sweat of his brow, but who extracts a share of the workingman's hard-earned wages to enable himself to live sumptuously and get the workingman into trouble. This personage, indeed, is the greatest menace to the peaceable settlement of conflicts between capital and labor.

* * *

WINTER WHEAT IN THE FAR WEST.

The country west of the great wheat fields of Assiniboia, or what, to speak more correctly, is now to become famed throughout the world as the Province of Saskatchewan, has been looked on, or large sections of it, as a great ranching territory, good for ranching and nothing else. This view, of course, was due to the semi-aridity of the climate, which, without artificial irrigation, rendered the growing of crops a precarious undertaking, a condition which was not under-estimated by the ranchers, whose interest it has always been to be disturbed by the purely agricultural element as little as possible. As may be imagined, therefore, the dryness of the climate and the difficulties of crop-raising lost nothing in the telling through the mouths of the first occupiers of this great territory. But to-day there is a different story told. In the district of Southern Alberta the story of the triumph of the farmer over the rancher as told in the everyday anecdotes of the residents of that, perhaps, most hospitable section of the West reads like a fairy tale. Our special correspondent, who is spending some weeks in the new Provinces, formerly territories, dwells upon this in his latest letter, dated September 9th. In other parts of the West, as, for example, in Montana and Nevada, in the United States, he says the same struggle has been accompanied by sometimes bloody feuds; but in Canada, while the general result is none the less interesting, the tension has been allowed to relax more gradually, and the result may clearly be seen in the triumph of the agriculturist. "In some cases near Calgary can even now be seen the two elements fighting for supremacy on one and the same man's property. That is to say, a man who started ranching under the old conditions has gradually, with the taking up of surrounding lands, had to contract his herds, and, to come out even, has taken to farming. And when one says farming in this district, it generally means the growing of fall or winter wheat. Generally the rancher sees that the latter is much the more profitable part of his business; at any rate at a time when the range is becoming more and more limited, and the consequence is his fields grow larger and larger at the same time that his herds become smaller and smaller. To-day, while Calgary still may be said to be the centre of a great ranching country, it is a centre, the radii of which extend a very much greater distance out than of yore. And the same must be said of many another town in sunny Southern Alberta." In the Far West, particularly in the region around Calgary and in Southern Alberta, winter wheat is King, and that, in the opinion of many observers, is what is going to make the country.

The growing of winter wheat in Alberta has developed from small beginnings, but it is very apt to have a great influence on the growth of this section of the mighty West. For many years it has been known that to grow winter wheat was possible in spite of the comparative dryness of the climate. The knowledge, however, was not acted on in any earnest way. A few farmers grew it here and there —grew it chiefly for chicken feed and home purposes, for there was no developed market. Four years ago, or thereabouts, as our correspondent describes, a man thought he would put in a big piece of it. "How much?" "Oh, quite a crop," was the reply. "Was it a success?" and he echoed: "I should say! What do you think of forty bushels per acre, and in one part of the field fifty-two bushels per acre? Yes, sir; that's *success* enough for me. Winter wheat is the thing for Alberta." Since then the sowing of winter wheat has advanced by leaps and bounds. Last year in one section that I have in mind the yield was extraordinarily good, but it was *not good enough* to supply seed sufficient for the multiplied fields contemplated for this year, and so on, for the acreage next season will be enormous.

The "philosophy" of winter wheat is not difficult to understand. It is sown in late summer or early fall, obtains a good growth before cold weather, and then, even though severe weather be encountered, the roots have obtained such a firm hold on the soil that when spring opens the plant and the grain can be rushed forward to maturity even in spite of drouth. This is why people say: "Winter wheat is King." It solves the problem of permanent prosperity for a wide country. Admittedly, ranching is good, but it is not considered to represent such a solid basis for future development as grain-growing and mixed farming. This is why the most difficult thing to find in the whole countryside of Southern Alberta is a person who has not infinite confidence in his own particular ant-hill; and why, if earnestness and hard work and whole faith stand for anything, it is bound to go ahead with leaps and bounds.

Mr. Wilson explains in this connection that Southern Alberta is not the only part of the Province capable of growing winter wheat. It has been proven successful in the Edmonton district, though perhaps on a smaller scale. However, relatively speaking, its successful culture does not mean so much to the latter country, for the climate being more humid, it has the advantage of being able to produce spring wheat, and to become the centre of an even more diversified agriculture.

* * *

THE COBALT ORE DISCOVERIES.

It would be well if something could be done to restrain the credulous and excited people who, when any discovery of minerals is made, promptly take leave of their senses, and rush to buy land or rock or seasand, or even marshy or watery superficies, in the hope of making a fortune. Then, groups of men form themselves into syndicates or companies to exploit what are called "mines," but are really only shallow holes in the earth's crust, perhaps merely staked-out claims, on which there has been no conclusive exploratory work.

This sort of thing was done when the nickel discoveries were made in the Sudbury district of Ontario, and also when processes of producing aluminum gave promise of making the use of that metal universal. It was done again in the Lake of the Woods country, and in the Kootenay district of British Columbia. And no one will ever know how great a total of Canadian and other capital was locked up in these localities in sums of. hundreds, or thousands, or tens of thousands of dollars, which for the most part have thus far yielded no profit. A time may come when a return will be realized for all this money—some of which could ill be spared. But meantime it is sunk in experimental processes or tied up in excessive values paid for distant land or rock of varying worth or worthlessness.

The same sort of foolish haste is being made to spend money in inordinate proportion securing shares in companies to work prospective mines in the Temiscaming district of northern Ontario, where rich discoveries of cobalt are reported. A timely communication appears in the Toronto News of Saturday last with respect to this cobalt craze. The writer sets forth therein some salient facts which sensible people will do well to heed. He declares, for example, that the present outlook is that "there will be several times as much cobalt produced as the present users can possibly take"; and what logically follows:—"If discoveries [of cobalt] continue the price must inevitably reach the low values of the baser metals, particularly nickel." The prospectors and mine-owners have in their pockets the money already paid them for ores realized and sold; but what about the purchasers who have these ores on their hands? "The very richness of the find has seemed to put a stop to demand," for the market is distinctly limited. Two hundred tons or thereabout of cobalt is sufficient to supply the world's demand for that mineral for a whole year. Hitherto the sources of supply have been Sweden, Saxony, Bolivia, New Caledonia and Missouri, with a later discovery in the Transvaal of spiess cobalt, which is free from nickel. The deposit found last year in Ontario is mixed with silver, and, according to a writer in The Globe, no process yet discovered suffices to meet the peculiarity of this Canadian silvercobalt ore, which differs from the cobalt ores of other countries in its constituent parts.

The Monetary Times has seen several persons who have visited the scene of the cobalt discoveries, and has made independent enquiry as to the real conditions existing. The original mine, called La Rose, one vein in which has been followed for ninety feet, has produced the metal in marked richness. This valuable mine, we are told, is owned by McMartin Brothers, Dunlop, of Mattawa, and Timmons. Another vein has been pursued for sixty feet, and then appeared to "peter out," as the miners say. Various other finds have been made, but in quantity so small as to be comparatively insignificant.

No fresh discoveries of the metal have been made upon claims taken up this season. The great find which we have already described, and which has created the furore that now seems to carry many people fairly off their feet by its extraordinary richness, was made nearly two years ago. Another feature which prudent people will bear in mind is that the titles to many claims taken up this summer in this Cobalt region are very uncertain, for the reason that in order to secure right to a claim it is necessary that an affidavit be made by the prospector that valuable mineral has been discovered *in situ* thereon.

In view of these facts it behooves people who are asked to put money into "cobalt mines" or to get up companies to erect smelters for silver-cobalt ores to take time and get expert advice—else they may have to wait a long time for a return for their money.

COUNTERFEIT LIFE INSURANCE.

A Fifteen Years' Record.

Very early in the history of life insurance it was found necessary to make calculations, and base the yearly charge or premium upon the general mortality —upon the duration of 100,000 lives; also, to collect a margin above actual yearly death losses, to be accumulated at compound interest until needed to defray the far heavier death losses that were sure to occur in old age.

In utter defiance of both these essential elements comes the procedure of the modern craze of assessmentism. By the advocates of fraternal insurance, as carried on hitherto, the schoolmaster, the actuary, the mortality tables, and the rate of interest likely to prevail—all four—have been pretty generally ignored. A number of people form a society and raise the money needed to pay the first losses that occur without any regard whatever to the later ones, which may, in the old age of the society, fall with crushing weight upon a few.

The foregoing paragraph gives a correct statement of the origin of every assessment society now and heretofore in operation, whether now flourishing or dissolving, or already wound up. Some of them a few years ago discovered the importance of providing a reserve fund, and increased their rates to some extent, but none of them sufficiently so to ward off the final disaster in which they must all make their exit. Every year witnesses the ending of some such society, while others inspire hope for a time by laying by what is found in every case to be a totally inadequate reserve fund.

The following is a record for fifteen years past of the membership and the cost per $1,000 to the living members of each year's death losses (assuming that the clerical expense of the business does not exceed $4 for each member on the rolls) of thirty-two of such assessment societies. One of them, however, the Mutual Reserve Fund, of unsavory memory, has recently repented of its evil deed in persuading its victims that it could save them millions of dollars, and is now trying to prolong its life as a regular company, charging ordinary premiums. But it is so loaded up with bad risks through the sifting process that its mortality rate is very heavy, and the time it may live is most uncertain.

Name and date of Origin.	Year of Record.	No. of Members.	Cost per $1,000.	Year of Record.	No. of Members.	Cost per $1,000.

We shall complete the list and our comments in another article, probably next week.

* * *

AN INSURANCE EXAMINATION.

When the McMullen Bill to amend the Insurance Act, which was afterward withdrawn, was before the Canadian House of Commons some little time ago a promise was made by one of the Ministers, Sir Richard Cartwright, that the Government would examine during the recess into the whole question of life assurance. One reason for such careful examination is the large dimensions which the life underwriting has reached in this country, and its consequent surpassing importance to a very large part of the population; the other was stated by Sir Richard to be the "events which have occurred in a neighboring country directing public attention to some dangers which are incident to the accumulation of very great funds in the hands of persons not having, perhaps, that direct interest in their management which would effectually protect the interest of the policy-holders." The reference was clearly to the state of things recently exposed in the management of the Equitable Life Assurance Society of the United States.

The probing which the affairs of that society have received, while it made known that improper and dangerous practices existed among the directors in handling the company's funds, has gone far towards a radical cure of such practices as far as regards this particular company. But now comes another most unwelcome revelation of a similar kind in connection with the investigation of the New York

Life Insurance Company, reported in the Associated Press despatch of 12th September. The treasurer of that company, after an hour's cross-examination, admitted that a sale of $800,000 bonds had been made on 31st December, 1903 (admittedly in order that the company's holdings at that date might not appear above a certain amount in the State Superintendent's yearly report), and that these same bonds were bought back by the company two days afterward, namely, on the 2nd January, 1904. Some other of the company's transactions in bonds were enquired into, one of which had resulted in a loss, and another, also apparently a losing one, the treasurer's memory could not recall. Now, whatever may be pleaded or explained with respect to the great extent of the company's funds and the propriety or necessity of committees of shrewd directors to handle these funds so as to render them profitable,—and the treasurer of the Mutual Life of New York states that syndicates are necessary for this purpose—there is no excuse for stealthy manipulation of them in order to keep the letter of the law while evading its spirit.

The average man who reads the evidence in this and similar examinations into the affairs of large life underwriting companies is very apt to draw unfavorable conclusions from them as to the honesty of management of *all* such associations. Of course, it would be extremely unjust to do so, for there are plenty of honestly administered life companies. But such concrete instances as these of the Equitable and the New York Life are not so easily explained away; and are of serious damage to the whole life assurance fabric, lending some force to the criticism sometimes heard that when underwriting companies grow too big they become unmanageable.

There is no reason, so far as we are aware, to believe that any of the large Canadian life companies are not honestly managed. And it would be a profound surprise and shock should anything of the nature of dishonest manipulation of funds on a large scale be proven in connection with any of them. But if the Canadian Government adheres to its intention to examine into the methods of insurance company management, it would go far to satisfy the public that policy-holders in Canadian companies have nothing to fear from speculative conduct on the part of drectors or managers to have the examination include the manner in which our life underwriters handle their securities. The closer the enquiry, the more honor to our companies that they endure it without blemish.

THE STEAM TURBINE.

The progress made in the Turbine System of steam propulsion of vessels and its growing use in other directions renders some particular reference to that system timely. We find in a paper prepared recently by Mr. W. Owen Wilkins, M.I.E.S., some interesting particulars as to the economy of turbine engines as compared with reciprocating engines, having regard especially to the marine steam turbine engine. Referring to what he terms "the absolute efficiency of the turbine system for ship propulsion," the author declares its demonstrated success to have been only possible through the zealous labors and scientific study of the problem made by its inventor, Hon. Chas. A. Parsons, F.R.S., whose experiments have effected in ten years what is almost a revolution in the form of machinery for propelling fast vessels. Appropriately enough, the writer devotes his first page to describing the mechanical principle of the turbine, thus:—

> The Parsons turbine consists of a cylindrical case with numerous rings of inwardly-projecting blades. Within this cylinder, which is of variable internal diameter, is a shaft or spindle, and on this spindle are mounted blades, by means of which the shaft is rotated. The former are called fixed or guide blades, and the latter revolving or moving blades. The diameter of the spindle is less than the internal diameter of the cylinder, and thus an annular space is left between the two. This space is occupied by the blades, and it is through these the steam flows. The steam enters the cylinder by means of an annular port at the forward end; it meets a ring of fixed guide blades, which deflects it so that it strikes the adjoining ring of moving blades at such an angle that it exerts on them a rotary impulse. When the steam leaves these blades it has naturally been deflected. The second ring of fixed blades is, therefore, interposed, and these direct the steam onto the second ring of rotating blades. The same thing occurs with succeeding rings of guide and moving blades until the steam escapes at the exhaust passage.

The first vessel fitted with a steam turbine engine, the "Turbinia," 100 feet long and 9 feet beam, was built at Wallsend-on-Tyne in 1894, with a single engine, and her earliest trial was on 14th November that year. First one shaft was tried, which carried in succession, in different trials, one turbine, then two, and so on. Next two shafts were tried, and finally three, with one or more propellers on each. Finally the best results seem to have been reached by using three shafts, dividing the turbine so that one-third of the total power of the engine is applied to each of the shafts at once—the high pressure cylinder driving one, and the low pressure cylinders one each. The "Turbinia" attained a speed of 34 knots, or more than 39 miles per hour, and this speed was maintained for a series of hours. No such speed had ever before been attained on water. The naval authorities of the country, attracted by these performances, ordered in 1896 two torpedo boat destroyers of 340 tons each, to be built and fitted with turbine engines. These, the "Viper" and "Cobra," attained a speed of 42 and 41 statute miles per hour respectively. Unfortunately both swift vessels came to grief at no great age; the first being sunk by striking a rock off the Channel Islands, the other being lost in the North Sea. They carried three and even four screw shafts with two or more propellers on each, and had two distinct sets of engines on either side the vessel.

But the passenger steamer people had not been idle spectators of such speed on the water, and soon showed their practical interest by still more practical orders for the new engine. Next to the destroyers in point of time came the steamers "King Edward" and "Queen Alexandra," which appeared in 1902 to take part in the Clyde passenger trade. These are 250 and 270 feet long, and their mean trial speed was 23 miles an hour. Since then, some twenty steam passenger boats, steam yachts and Government steamers have been fitted with turbine engines, among the latest being the Canadian lake steamer "Turbinia," the "Victorian" and "Virginian," of the Allan Line of ocean steamers, 11,400 tons each, and the Cunard Line steamship "Carmania," of 21,000 tons. And now the turbine engine is being fitted for other purposes than marine propulsion, for its economy is being found out. And they are made in various places in England besides the Parsons' works, notably in the British Westinghouse works in Manchester.

Mr. James Denny, the well known Clyde shipbuilder has made known some valuable comparisons between the speed, carrying power, and coal consumption of turbine vessels and those with reciprocating engines. Compared with a Clyde paddle steamer with engines of the old type, the "King Edward" saved 20 per cent. in coal; and compared with triple reciprocating engines of same boiler capacity she made a mile an hour better time, and had much less displacement, owing to the lesser space in the hold occupied by turbine engines.

* * *

—The Government Commissions are having a busy time in Western Canada. Various boards of trade, notably Vancouver and Victoria, are preparing programmes of subjects for them. The Transportation Commission was sitting at Winnipeg on Monday last, consisting of Messrs. Reford and Ashdown, with Mr. C. N. Bell as secretary. The commission intends to leave Winnipeg on Monday, the 18th, to hold sittings at Regina, Calgary, Edmonton, Vancouver, Victoria, New Westminster and Nelson. They will probably go out by the main line, returning by the Crow's Nest Pass. At their Vancouver meeting on the 26th the Board of Trade of that city will present a number of subjects for its consideration. One strong object of the commissioners is to ascertain the best and cheapest way of transporting Canadian goods to the markets of the world by Canadian ports, and to discover the reasons for the diversion of Canadian trade through United States ports. At Victoria, committees of the Board of Trade have been discussing the injustice done the Coast manufacturers as a result of the exorbitant rates from western points compared with those in force from Manitoba and the North-West, and this will be brought before the Commission. The Tariff Commission will be in session also, and will probably have to consider various matters. One that has troubled the Board of Trade is salmon trap licenses and the ownership of foreshore rights.

CURIOSITIES OF TRADE.

It must prove interesting to Canadian readers, many of whom have very little experience of business outside of their own country, to learn what goes on in mercantile circles abroad. There are odd things and funny things continually happening in outlying parts of the world. Occasionally we have them rehearsed by travellers; and again we find them embalmed in novels. This week we find some unusual items in an English monthly, The Mercantile Guardian, conducted by Walter Lindley Jones, F.R.G.S. It gives an insight into the peculiarities of foreign markets. Here, for instance, is a remarkable attitude towards credit, which is said to prevail in the eastern part of the Mediterranean:—

"The report of a French Consular officer in the Levant gives a strange account of business methods. It is quite exceptional for shopkeepers to have capital to commence with, the fact that one has a shop at all is warrant enough for demanding credit. And it is mortally insulting to a trader to demand payment on delivery of goods. He will pay when he can and he will not expect any written receipt when he does pay. Germans selling to the native traders exact acceptance of a draft, and as the Levantines, for some obscure reason, object to having their paper protested, a threat is usually enough to bring about an arrangement. These idyllic conditions are made more practicable by limiting deliveries to small quantities, and by the higher profits that a merchant of known forbearance is able to obtain."

Referring to West Africa, a writer for the journal says: —As to those quaintly preposterous letters asking for "honored samples and respected catalogues" which people in England are continually receiving, my friend explains, they are most often the work of some negro who has come into a little money. His instinct is to buy phonographs, bicycles, boots, suits and articles less useful in an absurd profusion. So he writes, or he and a committee of friends write, those amazing requests which add so much to the gaiety of counting-houses.

While people in many lines of business in England are shilly-shallying about opening an Egyptian connection, two London firms of wholesale stationers are going straight to the point. They are opening, one in Cairo and one in Alexandria, printing works.

Describing Damascus as being well catered for by Manchester houses, the Guardian says, however, that the centre does not appear to improve at all, that is to say, from the view-point of the general trader. "The mischief is that the vilayet stays just as it was when the present generation was born. There is an illicit business in Martini-Henris, Mausers, and Mannlichers, an improving trade in canned goods, some hardware and a little metal. Austria, Germany, Belgium and Italy send in paper, leather, matches, drugs, dyes, glass, and the cloths and yarns which form the overwhelming preponderance of local needs."

At Smyrna the zeal of the Customs officer is undiminished, and at that model port nothing electrical, unless it be a door bell or a pocket lamp, is given admission. Soap, if it contains—or is said to contain—more than half per cent. of caustic soda and of such innocuous ingredients as French chalk is stopped. No chemical, related, however, distantly to manufactured explosives, is allowed to enter, and patent medicines must be of a disclosed formula. Even bacon and ham, which are neither useful to bomb-throwers nor prejudicial to the complexion, must be accompanied by a certificate of health issued at the port of shipment, or origin and visaed by the resident Ottoman Consul. For the time being, at least, officers do not break open iron safes to satisfy themselves of the absence of contraband. The oath of the maker, certified by the Turkish Consul, is sesame now.

In New Zealand an interesting little passage-at-arms between the Government and the makers of cure-all medicines has led to the ignominious defeat of the former. First the legislature decided that proprietary medicines must carry their formula upon the label. That being done the "just-as-good" local druggist would, of course, dispense the mixture himself. When the makers announced their intention to stop advertising the press took fright and the Government withdrew. Then it was stipulated that medicines containing a particle of deadly drug should be labelled, "This contains poison." Again the State had to withdraw, and exporters of such goods may breathe a little more freely. No doubt the double victory will encourage others to defy the lightnings of so meddlesome an authority.

* * *

NEW BRUNSWICK ITEMS.

The following items from our Saint John correspondent were unavoidably held over last week:—

Great interest is created in railroad circles over the reported announcement that a Canadian Pacific Railway surveying party is running a line from the C.P.R. line at Debec, Carleton County, to Mattawamkeag in Maine, which is the junction point of the Canadian Pacific and Maine Central railways. There is a rich agricultural country in northern Maine and New Brunswick now served almost exclusively by the Bangor & Aroostook Railway, and the Canadian

Pacific Railway is believed to be seeking a way to get a portion of the trade, which seeks its market in Boston. If the new line is built the Canadian Pacific Railway would be able to divert some of this business, giving it to the Maine Central at Mattawamkeag.

The city of St. John which is spending nearly $200,000 on improvements to the water supply, recently offered a bonus of $15,000 to the contractors on one section of the work where unexpected difficulties have arisen. The "string" to the bonus was that the work must be finished by November 1st, and that in consideration of it the contractors must forego all claims for extras. After some days' deliberations Messrs. McArthur and McVey refused the offer, so now it is presumed there will be big bills for extras. There is also doubt whether the work can be finished before winter. These contractors met with quite a heavy loss on Monday, when a severe rain storm flooded their trenches and destroyed more than one hundred feet of wood stave pipe that had been put in position, but was not covered.

There is great speculation here over the purchase by John K. Schofield, a prominent merchant, of a large building on the corner of King and Canterbury streets, in the heart of the retail section. Mr. Schofield says he is acting for other parties, but is not authorized to say who they are. The impression prevails that the Royal Bank is the real purchaser, and that it is intended to get larger and more modern quarters than those at present occupied on Prince William Street. The Bank of Commerce is now building on King Street very near the structure reported purchased by the Royal.

The St. John Street Railway Company is now extending its electric light wires to west St. John and to the adjoining village of Fairville, where it will come into competition with the Carleton Electric Light Company, which has the contract for lighting the Carleton streets, and also does a large business in private lights. The competition will bring reduced rates. The Carleton Company although a much smaller concern, are threatening to retaliate by invading the territory heretofore served exclusively by the street railway, and also say they will tender for the contract now held by the larger company for lighting the St. John streets.

* * *

BANKING AND FINANCIAL.

The Merchants Bank of Canada advise us that they have opened offices at Vegreville, Alberta, which is seventy-five miles east of Edmonton, and at Shoal Lake, thirty miles north of Virden, in Manitoba.

A sale was made on Wednesday last of a seat on the New York Stock Exchange for $84,000, which is said to be $1,000 more than the previous high record price.The name of the purchaser was not given, but who ever he is he will have to make $250 a day to "pay his rent," so to speak.

Word comes from New Brunswick of the resignation by Mr. W. E. Stavert of the position of general manager of the Bank of New Brunswick. This is an item of interest in banking circles, inasmuch as Mr. Stavert has made a good record for himself, and is recognized as a man of good ability and strong grip. His experience has been varied. His banking training began, according to the St. John Sun, with his father in the Bank of Summerside, which was absorbed by the Bank of New Brunswick when W. E. became its general manager. For a few months in 1881 he was in the Merchants Bank, of Halifax, but in that year he joined the Bank of Nova Scotia, and was sent to open the Jamaica branch of that institution in 1889. Next he was asked to open the branch in Newfoundland in 1894. This branch being well established, he was transferred to Boston in 1898 to open the branch there, where he remained until appointed general manager of the Bank of New Brunswick in 1901. That he was a man with a good financial head may be inferred from the fact that in 1895 the Provincial Government appointed him one of the commissioners to draft a new assessment bill for the province, and when the Bank of Yarmouth suspended in March last, Mr. Stavert was selected by the Canadian Bankers' Association as curator. St. John papers of the 8th have it that Mr. Stavert will accept a responsible position with the Bank of Montreal, and the Toronto Star of a later date prints a despatch to the same effect. But upon enquiry in the proper quarter we have been unable to confirm this story. Nor will Mr. Stavert himself or his directors say when his resignation of the general management of the Bank of New Brunswick takes effect.

* * *

INSURANCE NOTES.

This is the week of the annual convention of the Travelers Insurance Company at the Hotel Frontenac, in the Thousand Islands of the St. Lawrence.

We are told that Mr. R. J. Stuart, Calgary, Alberta, manager of the Sun Life Assurance Company for the North-West Territories, left for his home in the West on Saturday after visiting friends in the East.

A Canadian Associated Press cable of Wednesday says that Detective Inspector Goldrich has left Birmingham for the purpose of bringing back John Forbes Maguire, who is in the hands of the Montreal police, on a charge of stealing various sums from the Canada Life Assurance Company, of which he was the Birmingham manager.

In answer to "Subscriber," Montreal, we would say that we saw a paragraph, about the end of August, to the effect that one Thomas Noonan, grand counsellor of the Order of Select Knights, had declared that Order would ask the courts to appoint a receiver for it within the next few days. Perhaps this is what you refer to. If anything more has appeared in connection with the subject we have not seen it.

The Fidelity and Casualty Company of New York, which recently entered the Canadian field, is making most satisfactory progress. In planting an insurance company it pays to take time, and this company is pursuing a very careful policy in the appointment of agents and the distribution of territory. Only the best are being secured. The lives covered by them in Canada are personal accident, health, burglary, and theft insurance. Messrs. Joseph B. Reed and Sons are the Toronto agents. Already a gratifying business is being written and the future is looked forward to with confidence. The policies of this old and respected company are, we are told, exceptionally liberal, and its position is a strong one.

The town of Fernie, British Columbia, is unfortunate in being after a prey to fire on repeated occasions. On August 26th there was a fire which caused a loss of $30,000 to $40,000, and included a church on which the insurance had expired a few days before. The people are indignant that the mayor, who should have known better, allowed the town's fire hose to be sent to the Fernie Lumber Company's mill. Anyhow there is but a poor supply of water. Mr. Henry Lye, the insurance adjuster, has visited the town and made a report upon the disaster, the insurance on which is some $15,000. Again on Wednesday of last week the mill and power house of the Elk Lumber and Manufacturing Co. were burned. The loss is $75,000 or thereabout, and the insurance $60,000. Fortunately it was raining heavily and there was no wind, so the fire did not spread to the planer and lumber piles.

* * *

AGENTS' CONVENTION OF THE MUTUAL LIFE.

On Tuesday and Wednesday, 5th and 6th September, was held the annual convention of the agents of the Mutual Life Assurance Company of Canada. The place chosen was Niagara-on-the-Lake, and the party numbered between 60 and 70.

A phase of the convention which proved interesting was the address by Mr. C. W. Pickell, of Detroit, manager for Michigan and Ohio of the Massachusetts Mutual Life Insurance Company.

Some of the matters touched on in this address were the elements of success in getting business. As related to the agents these elements might be referred to under two heads: "External" and "Internal." Those external to the agent were chiefly the company and its methods and record.

Under this head the speaker emphasized the great and superior advantages of the Mutual principle, under which the policyholders not only own everything, but also control and manage the affairs of the company entirely in their own interest, and also receive all—not merely a part, but all—the revenue and profits or dividends earned by their own money. That while in every great financial institution a great deal of power must necessarily be vested in the board of management, yet there is a fundamental difference between purely mutual life companies on the one hand; and stock or mixed life companies on the other hand, namely: In the purely mutual the power is always subject to recall, and the policyholders can organize, and turn out the board and all officers who do not faithfully administer their trust, and elect others in their stead, and so always have the power of redress in their own hands; whereas, in a stock company, or in a mixed company (i.e., a stock company in which policyholders are to some extent represented), there is absolute power vested in the stockholders which cannot be revoked or over-ridden by the policyholders, no matter what condition of affairs exist, because this stock power is always superior to, and can over-ride the will of the policyholders no matter how thoroughly the latter may organize.

As to "Internal" elements of success of the agent, these also were effectively discussed; and the various points made by the speaker were elucidated and pressed home by examples and humorous incidents. Every person who had the privilege of listening to Mr. Pickell came away feeling that he had been better fitted for his life work.

One of several pleasant features of the convention was the presentation to Mr. Pickell by the agents of a gold watch chain and locket of beautiful design, made in Canada and of Canadian gold, and suitably engraved, as a souvenir of his visit.

The success of this most successful convention was very largely due to the untiring efforts of the genial and excellent superintendent of agencies, Mr. T. R. Earl, who is deservedly popular with the agency staff. The officers of the Agents' Association elected for the ensuing year were: President, G. G. Mills, Toronto; vice-president, T. N. Scripture, Toronto, and secretary, C. R. Clapp, Woodstock.

* * *

—Montreal advices say that a very good attendance is expected at the dinner to be given in that city on Saturday evening next to Mr. W. K. George, president of the Canadian Manufacturers' Association. It is tendered by the Montreal branch of that body and will be held in the Canada Club, Board of Trade building, and will be presided over by Lieut.-Col. Burland, chairman of the local branch, or, in his absence, by Mr. D. Lorne McGibbon, vice-chairman. Appreciation is general on the part of the Montreal members of the able manner in which Mr. George has discharged the duties of the presidency, both at home and during the recent visit to Great Britain.

CLEARING HOUSE FIGURES.

The following are the figures of the Canadain Clearing Houses for the week ended with Thursday, September 14th, 1905, as compared with those of the previous week:

	Sept. 14.	Sept. 7.
Montreal	$25,283,382	$21,037,782
Toronto	20,815,447	17,129,634
Winnipeg	6,590,144	7,633,855
Halifax	1,953,152	1,665,922
Hamilton	1,293,659	1,177,455
St. John	1,114,202	945,773
Vancouver	1,995,876	1,891,531
Victoria	994,640	561,258
Quebec	1,665,830	1,658,188
Ottawa	....	2,314,667
London	913,019	840,072
Total		$56,856,137

—A crop estimate has been made by F. G. Fowler, secretary of the North-West Grain Dealers' Association. He thinks 91,500,000 bushels of wheat will be this year's crop in Manitoba and the West. In his crop report showing the crop condition on August 15th, Mr. Fowler figures on the acreage, average yield, and total production of the four grain crops—wheat, oats, barley, and flax. His figures indicate that the present year is to establish another record mark in the matter of cereal production. The figures are as follows:—

Grain.	Acres.	Average yield.	Total yield.
Wheat	...4,019,000	22.8	91,683,200
Oats	1,003,000	47.2	67,165,000
Barley	... 433,800	31.5	13,664,700
Flax	 34,900	13.5	471,150

* * *

"No more will I hear his footsteps on yonder walk just as the clock strikes the hour of 8."

"Gracious, Jeanette!"

"And the old parlor light will never burn low for him again."

* * *

"You say he is a financial wreck. Then why is it that he appears so happy?"

"Well, I guess his credit's so poor that he can't even borrow trouble."

TENDERS FOR DEBENTURES.

TENDERS, sealed and endorsed "Tenders for Debentures," will be received at the office of the undersigned, until Monday, the 18th day of September next, at 4 p. m., for the purchase, in whole or in part, of Debentures of the Corporation of the City of Victoria, as follows:

1. Debentures amounting to $100,000.00, issued under authority of the "Sewers Loan Guarantee By-law, 1905," numbered 456, dated the 1st August, 1905, and maturing 1st August, 1955.

2. Debentures amounting to $11,000.00, is sued under authority of the "Electric Lighting Loan By-law, 1905," No. 457, dated the 1st August, 1905, and maturing 1st August, 1915.

Both sets of Debentures are secured upon the credit of the Municipality as a whole; their denominations are No. 1, $1,000.00 each: No. 2, $500.00 each, and they bear interest at 4 per cent, per annum, payable half yearly, the principal and interest being payable at the office of the Bank of British North America, either in Victoria B. C., Montreal, London, England or New York, U. S. A.

The tenderer must state the price net at Victoria which he will pay. In addition to the net price, the purchaser will have to pay to the Corporation the interest on the said Debentures for the period between the 1st of August, 1905, and the date of the receipt of the purchase money by the City Treasurer.

The Corporation does not bind itself to accept any tender.

CANADA AT THE LIEGE EXPOSITION.

(From an Occasional Correspondent.)

After leaving Italy and spending a few days in Germany we came into Belgium, that interesting country whose inhabitants have been a trading nation since the days, long ago, when the Flemings bartered their products of hides, furs, and wool with Britain. To-day the trade of Belgium with the United Kingdom amounts to some forty millions of pounds. Although the area of Belgium is only 11,372 square miles, say half the size of New Brunswick, its population is greater than that of all Canada. The land is in the hands of small holders and nearly every square foot of good soil is cultivated. Small as the country is, its people are ambitious, and a few years ago some of its leading citizens determined that Belgium should have a World's Fair.

In order to accomplish this object a joint stock company was organized and with the assistance of Government aid the International Universal Exposition was opened in Liege, in May last in commemoration of the 75th anniversary of Belgium's national independence. Liege is an important manufacturing city, having a population nearly as great as Toronto. The Exposition is really a good one, instructive as well as interesting. The French exhibits are very large and varied. Germany, too, and Belgium have extensive exhibits, as might be expected. But to my surprise neither the United States nor Great Britain makes a display worthy of their names. On the other hand Canada, Africa, and Algiers occupy separate buildings, and exhibit an extensive variety of products. Japan and China, too, are well represented.

The building occupied by Canadian merchandise stands out boldly and is very attractive. Its central tower is 120 feet high, and the hall itself is 180 by 105 feet. What is shown therein is worthy of a nation, and the visitor cannot fail to be impressed that ours is a great and vast country. There are numerous illustrations of the scenic beauty of Canada, its fertile prairies, its boundless wealth of mines, forest and fisheries, its abundant fruits. Sixteen large oil paintings of farms and farm buildings at various periods during a series of ten years show the stages of progress made by immigrant settlers. These pictures are framed in grass and grain, and with the aid of hidden lamps of electric light, they appear to have the sun shining on them. Beneath these pictures one can learn the name of the owner, etc., etc. One may learn also the quantity of grain raised in the country for a period of years, showing enormous increases. Around the interior of the upper part of the building is a wide gallery devoted to raw and canned fruits, cereals, honey, maple syrup, etc., etc. These are displayed in a very artistic way and make one feel that Canada must be a fine country to live in when one can have such a great variety of rich food.

The mineral section, too, has an extensive and well arranged display. There are to be seen pyramids of iron, nickel, copper, mica, coal, plumbago, lead, antimony, cobalt, etc., and around these are printed in large letters: "Canada, the largest producer of nickel in the world"—"Furnishes 85 per cent. of the corundum produced in the world"—"Mineral production $63,343,165." One may also learn a great deal about the fur-bearing animals of the country. Specimens of these have been stuffed and arranged in family groups. Some of our fish are also displayed in a preserved state, and with them is the statement in large letters: "Canada's fisheries, the largest in the world—The value of fish caught in 1903 reached the magnificent sum of $23,101,878." A fine display of woods in their natural state is made; also dressed and polished Canadian woods. Attention is besides called to our large forests of pulp-wood, and figures are given showing the vast quantities. Specimens of pulp are shown. Among other facts stated are: "Edmonton, the capital of Alberta, is 455 miles farther south than St. Petersburg, Russia." This gives the foreigner some idea of the climate in our most northerly agricultural district.

In view of the facts I have stated, you will not be surprised to hear that the Canada building is one of the chief points of attraction at the Liege Exhibition, and that as many as 40,000 persons have passed through it in a single day. All these were freely supplied with abundant literature, well printed, in different languages. Nothing of that sort was given away elsewhere, so far as we saw, neither were there any samples distributed as is done at our fairs. Although the Chief Commissioner, W. Hutchinson, was absent in London while we were there, our party did not lack attention. His assistants, Messrs. Brodie and Girardot, ably discharged his duties. The former has had five years' experience in connection with other large fairs. This fair, in a word, serves the purpose of a high-class emigration bureau for Canada. Visitors can obtain every sort of information valuable to intending colonists—choice of

STERLING BANK HEAD OFFICE: TORONTO.

Temporary Premises: Manning Chambers.

The Sterling Bank is now occupying provisional quarters and an office staff is engaged in completing the process of organization. The following constitute the proposed Board of Directors:

HON. S. C. WOOD, Ex-Treasurer of Ontario, Vice-President of the Imperial Life Assurance Company, Director of the Toronto General Trusts Corporation, Director of the British American Assurance Company.

location, etc. And taken as a whole it is an interesting and convincing object lesson in the physical geography and general resources of a country. When our Dominion is half as well developed as Belgium, for instance, it must be one of the richest countries in the world.

E. T.

Brussels, Belgium, 26th August, 1905.

* * *

NORTH OF ENGLAND LETTER.

Peace and its probable effects on trade is the absorbing topic of conversation. It is early yet to talk, but it is realized that the effects must be complex. We had fixed on the peace as the turning point in affairs beforehand. All manner of evils were to be dissipated and all sorts of good to accrue. Even a sorrowful Johannesburger lately wrote to me that with the end of the war, business was expected to take a turn. The hostilities have been held responsible for many things, and occasionally without the excuse of either rhyme or reason. But it is surely to the good of the world that an end has been put to the appalling drain on capital resources. Some £260,000,000 are said to have gone in the disastrously unproductive business, and it is assumed, now that international complications are not to be feared, that the shy bird, capital, will venture forth with greater confidence. On the strength of these circumstances large export advertising campaigns are being planned and new heart is being put into some of our manufacturers.

Apart from these broad effects, certain of our chemical makers will lose remunerative business in materials for explosives. Iron and steel will gain from a new demand for ships. The wool market may lose some of the support of military orders, and so may leather. The case is uncertain, because Japan must replenish in all events, and the dormant Russian and Polish industries will require material on resuming full work. No doubt is felt by men on the spot that a great jump will take place in Russia's imports of manufactures, and would-be participants are urged to put in their claims immediately, or to rest content to see German rivals annexing the trade.

Why have we no Canadian Chamber of Commerce in London and no British Chamber in Toronto? Perhaps we get along pretty well without these aids, but it is significant that in Paris, Genoa, Alexandria, and other foreign cities British Chambers exist, and various sets of English traders have formed Chambers in London. The newest comer is the Anglo-Portuguese which will give the best assistance in its power to all who are interested in trade between the two countries in either direction. It must rest with those who would benefit most to take the initiative, and to make those organizations authoritative and effective.

Traders with the West Indies are not wholly unfavorable to the suggested federation of the British Islands to the Dominion Government. Colonial office administration has been none too successful, the islands under America's wing have made much greater progress relatively. While we should be reluctant to approve of measures making the British West Indies the exclusive preserve of Canadian manufacturers, our capitalists and import and export merchants would welcome the prosperity that Dominion aid ought to bring. Probably enough arrangements could be devised that would be equitable all round, and would lead people in this country to join hands in improving West Indian natural resources. It is recognized that the Islanders chafe under the official yoke, that they dislike the idea of absorption into the Union, and the proposal of the Maritime Board of Trade at Halifax is regarded hopefully as a promising alternative. But the arrangement must be made mutual in its benefits. An unfortunate impression has been created by the news that Canadian sugar-refiners have appropriated the whole of the 33 per cent. preference given on West Indian sugar. The decision may be pardonable, but administrative rearrangements must be framed more generously.

In his Radical and town-councillor days Mr. Joseph Chamberlain was screw king. He controlled the family buisness of Nettlefold & Company, and when an American patent revolutionized the industry it was Mr. Chamberlain who was found in control of the European rights in the invention. A few years sufficed to exterminate such rival-makers as declined to come to terms, and joiner's screws paid a handsome tribute to the Chamberlain fortunes. Since those days many things have changed, and in face of foreign competition prices have fallen to the verge of unprofitableness. German makers ran down prices here and the pugnacity of the Chamberlains led them to retaliate in kind in Germany. When the Germans came to an understanding between themselves they recognized the dangers of assault from England. So perforce they have made terms with our makers, whereby the national markets will be kept sacred to national makers. The upshot is 50 per cent. on the price of screws in England, and with this margin to work on Canadian producers of good screws for wood may feel inclined to enter into competition. If so, they can be accommodated, at the office of this paper, with names of importers.

It will be noted how often movements to regulate trade begin in Germany. There, cartels, pools, syndicates, export unions and other combinations are plentiful as blackberries. To some extent their effects have been beneficial, as efforts to adjust production to the measure of consumption ought to be. But all artificial interferences bring their revenges. The farmers who kill the birds suffer a plague of insects, and the manufacturers who strangle competition and individual ambition incur their own special penalties. The strong have to pay to keep alive weaklings who—economically considered—would be better dead. Manufacturers who no longer have a prospect of unlimited prosperity, as a spur, begin to flag in energy and to lose interest in improvements. Then the dumping of surplus products abroad shapes its own reprisals. These products are chiefly semi-manufactured and they fall into the hands of English or Belgians, who complete the operations more cheaply than the Germans can, and use that dumped material to defeat German ends in neutral markets, and even in the Fatherland.

Thanks to a trade agreement with German makers of plate glass, a closed factory, employing 800 work-people, is being re-opened by the great firm of Pilkington Bros. We lose something and gain something by the syndication movement in Germany. A case came to light in which a Manchester dry goods house bought women's skirts in Berlin, had them conveyed to England, and positively sold those articles regularly in South Germany, paying freight and duty, and taking a satisfactory profit as well. Dumping does not explain the whole of that transaction, for the goods

were taken as English-made, and so commanded an extra value in German eyes. From this bit of duplicity one may estimate the cash value of a good name.

When the Canadian press is disposed to be hard and sarcastic about the defaults of Canadian canners of fruit, let the writers pause. Better a blemished industry than none at all, and strange to say we, in England, have not one. Tons of fruit rot yearly because of the height of rail charges and the rapacity of commission agents. But somehow nobody thinks to can our plums and berries. Whatever the indiscretions of some Canadian packers, it is a demonstrated truth that you have good and reliable brands.

NORTH COUNTRY.

Manchester, Sept. 1st.

* * *

INSTITUTE OF BANKERS IN SCOTLAND.

The thirtieth annual report of this Institute has been received from the secretary, Mr. William Baird, F.S.A., of Edinburgh. The council reports that the year's work of 1904-1905 has been one of unprecedented success. The number of candidates for the examinations numbered 706, of whom 243 passed the associates' degree, 64 the members' degree, and 13 the "honours" in membership degree; while 319 entrants made "partial passes." With the entry of the successful candidates, the membership roll numbers 1,542. The premiums paid by the Scotch banks to successful candidates in their service amounted this year to over $9,000, and the sum demonstrates tangibly the opinion of the directors of the banks as to the benefits of technically educating their staffs. The examiners had submitted to them 4,325 papers, which shewed greater excellency than those of previous examinations; and no less than 123 papers in the associates' degree were awarded the full percentage of marks. Fourteen of the candidates were from London and one from Cairo, Egypt. The year's special lectures were given by Mr. Hugh P. Macmillan, advocate, on "Law of Partnership," and Mr. Allan M'Neil on "Bills of Exchange." The lectures were given in conjunction with the Scotch Societies of Accountants, and held in Edinburgh, Glasgow, Dundee, and Aberdeen. The set of able lectures given in 1904 by Mr. Neil B. Gunn, on "Stock Exchange Securities," were published in book form, and circulated to the members, at the Institute's expense. The prize essay competition for 1905-6 has been intimated, the subject being: "Scotland financially, and from a banking point of view, at the beginning of the 19th century, with an account of the rise of the later joint stock banks in Scotland." The first and second prizes, of $50 and $25 each, have been contributed by Mr. Thomas Shaw, of the National Bank of Scotland, Edinburgh. The highest marks in the examination were gained by Mr. Thomas Chalmers, National Bank of Scotland, Anstruther (members'); Mr. A. K. H. Boyd, Royal Bank of Scotland, Largs (honours'), and Mr. Peter Irving, Commercial Bank of Scotland, Annan (associates').

The income for the financial year amounted to $3,490, but was exceeded by the expenditure, $3,555. It may, at first sight, seem unusual that an organization of bankers should spend more than its income in any one year, but the explanation given is the unanticipated cost of the examinations. The savings of the Institute stand at $7,300, which sum is invested in British Consols and railways. An abstract of membership gives 1,512 members in the Scotch banks, and of this group 157 are attached to the bank, well-known to our readers: "The National Bank of Scotland, Limited." The remainder of the members are principally engaged with banking firms; and notably in London, South Africa, and India. A few years ago, a review in our columns of the constitution and work of the Institute gave cause for correspondence between Canadian bank managers and the Scottish Institute, and we anticipated, to some extent, an increase of Scotch members settled in the Dominion. This has not been realized, and, it may be, the Scot's thriftiness causes him to cease his subscriptions when he leaves his home land. If it is so (and in England we know it has been from our correspondence), it is to be hoped the members who settle in Canada will not forget their obligations to the Institute which—in conjunction with the other British Institutes—is elevating the "occupation" of banking to a learned profession. On the 1904 roll we note the following members of Canadian banking staffs: Mr. Hugh Baillie, Hamilton; Mr. James Brownlee, Waterloo; Mr. D. E. Bain, New York; Mr. James Cameron, London; Mr. David Muirhead, Windsor, of The Canadian Bank of Commerce; and Mr. Wm. A. Ryrie, of the Bank of Nova Scotia, Amherst branch.

* * *

ANSWERS TO ENQUIRERS,

With Apologies to Several for Delay.

"Wonderer" asks for some authentic statement of the number of persons killed and wounded in the Russian-Japanese war. The statement has been made in an American paper that the loss of Russia and Japan in the siege of Port Arthur and the battles of Liaoyang and Mukden amounted to 292,369. But more recently the London Times compiled the following statistics of the losses during the war: Russia lost 320,770, killed and wounded, and 67,700 were taken prisoners. Total thus 338,470. Japan lost 166,756 in killed and wounded, and only 646 by capture. Total 167,402.

Banker, Montreal.—In your last bound volume of the Monetary Times, page 1,446, April 28th, you will find the figures of New South Wales' imports from various countries and her exports to them for 1903 and 1904. Her imports from Canada were less than a million dollars out of a total of $37,000,000.

J. R. C., Winnipeg.—It is true that the business done by Canadian life companies outside of Canada is very considerable. Six of our companies take risks in Newfoundland; five of them in the West Indies; three in the United States of America; two in Great Britain. In January last we gave a list of places outside the Dominion in which life business was done by the Canada Life, the Sun Life, the Confederation Life, the Mutual, the North American, the Manufacturers, and the Imperial.

Bank Clerk, Vancouver.—We have repeatedly given such figures and facts: notably in our issues of 12th August, 7th October, 18th November, 1904, and 17th March, 23rd and 30th June of the present year. The last two described our treaty relations with Japan.

M. S., Sydney, C. B.—In answer to your enquiry, it would need a close knowledge of the movement of export merchandise from frontier points in Canada to tell the amount of goods sent abroad by our manufacturers in any particular city. We cannot answer your question, because the system employed by the Government at Ottawa does not give the place of origin of manufactured exports intelligibly. For example: The Blue Book figures of imports into six Ontario towns (Brantford, London, Hamilton, Ottawa, Peterboro', Toronto) in 1904 are given as $70,525,000, while the exports from these six ports in that time are given as only $67,971, or about a thousandth part as much. The latter figure is clearly misleading—but there it stands in the Blue Book: the exports from these towns being credited to Niagara Falls, Bridgeburg, Sarnia, Windsor, Prescott, *because* these latter smaller places are nearer the United States frontier than the six towns first named and *because* the law says that entries outward must be made at the "frontier port of exit." We devoted several articles to this subject in January and February last, and printed some letters from the Commissioner and Assistant Commissioner of Customs; but while these letters pointed out that the regulations of 1904 resulted in greater accuracy in the totals of exports they held out no hope of any figures being printed by Government that would show the value of exports from any particular town.

W. C., Glasgow, Scotland.—Write to the Department of the Interior, Ottawa, or apply to the Canadian agent, St. Enoch Square, Glasgow, for literature descriptive of the Great West of Canada. You may also procure for three

pence at the office of the Daily Record and Mail an excellent book, specially written for emigrants by James Lumsden. Its title is "Westward."

* * *

MORE ABOUT ALBERTA AND THE NORTH-WEST.

(From our Special Correspondent.)

There were many things of interest concerning the celebration at Edmonton, which were omitted from my last communication either inadvertently or because of lack of space. For example, nothing was said, though very much might have been, of that fine body of men, the North-West Mounted Police. A large detachment of these valuable guardians of the peace of the West, went through difficult manœuvres before His Excellency and—for a new country—an extraordinary large crowds of enthusiastic onlookers in the picturesque exhibition grounds at Edmonton, to which I have before referred. The North-West Mounted Police is a body which is not given to boasting of its prowess in the military manœuvre line. They have too much to do in the way of real work to have much time for the tinsel. But the fact is they carried out their part in the review just as well as if they had been the sort of soldiers who know little else.

The Mounted Police are a unique class, of which Canadians may well be proud; in truth, we have few institutions so closely related to the governing body of which we have so little to be ashamed. Some of their exploits read like an epic. Imagine a couple of sergeants ordered to go and hunt up a "bad Indian," in the midst of his tribe perhaps a thousand miles away, and after a following of the trail through rock and tangle, over mountain and river, to seize and bring him back to civilization practically single-handed. Tales such as these are many, only they sound bald compared with the more picturesque reality which allows for the terrors of the wild country through which some of such exploits have led. It is not only in these more showy military feats that these Canadian military police show their mettle. For such, it is true, courage both moral and physical is required, but moral courage is manifested still more conspicuously in the way they undertake civil duties. I shall never forget the way in which a visitor to this country—an American—described what he had seen of the way in which the North-West Mounted Police carried through their duties. It seems he was present by permission when a small detachment was in the act of performing a certain duty of this nature. The civic duty referred to was the raiding of a certain house in the vicinity of a North-west town. One of the men arrested offered, it appears, the sum of $50 to the sergeant in charge of the detachment, if only he would let him slip the net. "No sir," was the quick reply, "nor for $5,000 can you bribe a man of the North-West Mounted Police." The American gentleman who described the scene said he nearly fell to the floor with astonishment. "Why, sir, for fifty dollars," he said, "you could bribe any civil officer in my state." It is to be hoped the American was exaggerating, but the story goes to show the high degree *esprit de corps* possessed by the mounted police, who pride themselves upon the fact that in the whole course of their existence there has not been a case where monetary or any other consideration ever caused either officer or man to shirk his duty.

Another incident of the celebration at Edmonton to which attention may be drawn, was the parade of school children. It was the sight of a life-time to see the hundreds and hundreds—how many hundreds I do not know—marching along the streets of Edmonton waving their Union Jacks and cheering, cheering—would they ever stop? They were in regiments, according to age, and these ranged from five-year-olds up to twelve or fourteen. The question on the lips of every visitor was, where did they all come from? The answer, that they all came from Edmonton or its vicinity, makes it very evident that there is but little race-suicide to be feared in the far North-West.

A surprising thing about these towns and cities in the North-West is the fineness and up-to-dateness of their stores, and another fact to cause astonishment is the extraordinary large business many of them do. Edmonton, for example, is a great fur emporium, and hundreds of thousands of dollars change hands every month in connection with that one staple. One store, I am informed, did a business of over a million dollars last year, a main portion of which was in silks and Paris goods sold to the people from the wilds who, when they buy at all, want the very best.

As may be expected under the circumstances, a little high feeling exists between the various cities in both the new provinces of Saskatchewan and Alberta as to which shall be created the permanent capital of either. The jealousy, however, is really only manifested to any extent by the cruder, younger elements of the population. For example, a Calgary paper had a paragraph the day after the celebration to the effect that the vice-regal train had passed through three or four inches of snow on its way to Edmonton. This was, of course, an absolute fabrication. However, the representative business men both of Calgary and Edmonton recognize the true factors of the situation. Both cities have made extraordinary progress in recent years, and both have wonderful opportunities for continued advancement. Calgary occupies already a very important position as a wholesale distributor for the country lying on four sides of her.

Edmonton is the centre of a very rich farming country, which is being opened up very rapidly. Should the country lying between it and the Peace River also become developed, as is far from being impossible in the near future, the latter is sure also of a large distributing trade. But whatever may loom in the future for Edmonton, and the probabilities are that it will be the permanent capital of Alberta, there is not the slightest doubt that Calgary will retain a very high position as one of the chief wholesale points on the line between east and west. The growing of fall wheat, too, is a thing which will redound to its prosperity in no mean degree. But this is a subject, the discussion of which I will leave for another letter.

F. P. W.

Edmonton, Alberta, September 6th, 1905.

* * *

Canada's commercial agent in Bristol writes to Ottawa that the Bristol docks committee are sending their assistant general manager, A. Harvey, to Canada early in September to endeavor to get a larger share of Canada's trade for that port. The new Royal Edward dock has just been completed at Bristol.

* * *

Word comes from Ottawa that herring cured at Yarmouth, N.S., by Scottish curing experts and sent to the United States markets brought last week $7.50 the half-barrel, or at the rate of $15 per barrel, as against a price of from $4 to $6 per barrel obtained under former systems of curing.

* * *

The South African Republics are apparently beginning to open out, and Canada is beginning to reap the benefit of the South African war by the way of trade extension. We observe that the Ontario Wind Engine & Pump Co., Limited, have received an order from Pretoria for three complete outfits of the well-known Canadian airmotors, and we are pleased to find the above firm pushing their goods into all parts of the world.

* * *

—It is so far satisfactory that enquiries from French houses who are open to do trade with Canada are becoming more frequent. The French Chamber of Commerce, Montreal, has recently received a number of trade enquiries: For instance, two Bordeaux wine firms desire to appoint an agent in Canada, or to do Canadian trade. A firm in Marseilles wishes to introduce into Canada its specialties of fruit preserves. Firm in St. Etienne, France, desires a reliable agent to sell ribbons, silks and velvets in the Canadian market. French manufacturer of linen and upholstery wants an active agent in the Dominion. French needle manufacturer wants to be put in touch with Canadian buyers. Parisian manufacturer of electric lamps wishes to correspond with Canadian trade, and a Parisian firm in dry goods is open to appoint a Canadian agent.

Reserve Fund	625,000
Total Assets	3,926,918
Total Liabilities	2,033,757

Debentures issued for 3 or 5 years. Debentures and interest can be collected at any agency of Molsons Bank without charge.
WILLIAM F. BULLEN,
Manager.
London, Ontario, 1905.

Mercantile Summary

At the end of this year there will be in Calgary 13 miles of sewers, 18 miles of water mains, 30 miles of plank sidewalks and 3 miles of concrete sidewalks.

Already J. O. Larose & Co., who bought a bankrupt stock of dry goods about a year ago, in the northern suburbs of Montreal, are themselves in the hands of the assignee, with reported liabilities of about $5,000.

The Detroit Evening News states that the passenger earnings of the Detroit United Railway for the last ten days in August were $154,841.70, an advance of $15,879.93 over the corresponding period last year. For the entire month the earnings were $485,078.94, a gain of $57,519.01.

Abdallah Sayre, a Syrian trader of Adamsville, N.B., is reported an absentee debtor, and his estate is in the hands of a curator.——E. B. Snarr, heretofore in a small grocery way at Sackville, N.B., is also reported away from the country, and creditors are likely to receive little on their claims.

In the town of Waterloo, Que., last Friday a vote of ratepayers on the woolen mills bonus by-law resulted in its being carried by a majority of 23 votes and $66,000 valuation. The bonus gives A. F. Savaria $30,000 and exemption from taxation, in return for which he agrees to enlarge the capacity of his mill.

A despatch from Nelson, B.C., says that Philip Argall, of Denver, the zinc expert appointed by the Dominion Government to assist Dr. Ingalls, of New York, in preparing a report on the zinc resources of the Kootenays, has arrived there, and in company with A. C. Garde, formerly manager of the Payne mine, will start out to prepare the field notes for Dr. Ingalls. The mines at Sandon are to be first visited.

At the annual meeting of the Quebec Bridge and Railway Co. last week the chief engineer reported the total metal manufactured to date amounts to 24,500 tons, of which 8,300 tons were delivered at the yard near the bridge site, and 2,500 tons of permanent steel erected. The same board of directors was re-elected except Mr. Breakey, who was replaced by Mr. A. Allan, as Montreal representative. Hon. S. N. Parent was re-appointed president of the company.

An estate which is likely to pan out very poorly for creditors is that of Rameh & Boohanna, a Syrian firm in Montreal, who have done a jobbing business in fancy goods, with peddlers of their own nationality, for several past years. They have also at different times carried on business as the Dominion Spoon Co., and the Oriental Tobacco Co. For a year past they have given evidence of considerable financial strain, being frequently sued, and they have now assigned, with assets of $400 to satisfy liabilities of some $7,000.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST. EAST TORONTO.

Mercantile Summary.

An attempt at compromise is being made by Mrs. H. Ryan, who has been in a small grocery way at Gananoque. Several suits have recently appeared against her.——The assignment is reported at Kingston of Hughes & Hughes, for some time engaged in the implement business in that city. J. H. MacNee is in charge of the estate.

It is well to know that a hotel has been opened at Shushartie Bay, at the north end of Vancouver Island, by Mr. Jeptha J. Skinner, who has been running a store there for some time. There is splendid hunting and fishing in the neighborhood; deer, elk, bear and wolf being abundant. North coast steamers call there. Camping and sporting parties can find cabins to rent.

A firm of engineers has asked the Canadian offices in London to place them in communication with manufacturers of wood handles in Canada. Enquiry is made for the names of Canadian exporters of laths or battens for packing oakum bales. The sizes of the laths required are 25¼ in. long by 1⅝ in. wide by ⅜ of an inch thick. Quantity 100,000 a year, in four lots, of 25,000 per lot, made up in bundles of 100 to the bundle.

From Sherbrooke, Que., we learn of the embarrassment of A. E. Lachance, general merchant, who has made a proposition to pay his creditors 40 per cent. of their claims, which amount to $4,000. For the past seven years Mr. Lachance has done business in the name of his wife, Adele Guerard, owing to an old failure in Beauce County, where he was formerly engaged in a store and sawmill business, and in 1901 he was reported as having arranged a compromise at 50 per cent.——J. E. Sauvageau, a confectioner of the same town, who recently sold out to G. Picard, is also offering 50 cents, on liabilities of about $1,000.

The assignment is noted of D. N. Godbout & Co., general merchants of St. Guillaume d' Upton, in Drummond County, Que., with liabilities of about $6,000. Mr. Godbout has had a business career of a more than usually checkered character. Originally he was long in a retail store at St. Marcel, where he failed in 1886, subsequently doing business in the name of his sister as a cover. She assigned in 1890, when he resumed the store-keeping in his wife's name. In 1897 he removed to St. Guillaume, becoming involved there the following year, compromising at 50 cents, and shortly after returning to St. Marcel. In 1901 he again removed to St. Guillaume, but after a few months he shifted to Lennoxville, from thence to Sherbrooke, and in the spring of 1904 he again turned up at St. Guillaume, having, like the proverbial rolling stone, apparently gathered no moss, but having gained quite an experience in local travel. Why a trader with such a record should get credit for $6,000, or 6,000 cents passes comprehension.

A Change in the Trusteeship.

Whether of a Will, Marriage Settlement or Bond Issue, is a troublesome and expensive matter.

Where private trustees are appointed such changes are inevitable.

The Trusts Company alone enjoys continuity of tenure, fixity of residence and permanent records.

Mercantile Summary.

The secretary of the Montreal Board of Trade, Mr. George Hadrill, has been elected an honorary member of the International Board of Foreign Trade, New York.

A Cape Breton paper states that Mr. Percy J. White, of the Beaver Hat Gold Mining Company, Goldboro, Guysboro County, N.S., arrived in Glace Bay last week with a brick of gold weighing 139 ounces and valued at $2,900. The brick is the result of twenty-four days' work at the Beaver Hat mine, where the total number of employees is only eighteen and a small five stamp test mill does the crushing.

It is reported from Ottawa that the homestead entries for the month of August were 3,059 in number, an increase of 696 over the same month of last year. The points where the principal increases have been made are Alameda and Battleford. Calgary, Red Deer, and Regina have doubled their entries, and there is a small increase in the Edmonton district.

The city of Victoria showed a very satisfactory activity of trade during August. Her imports were: Dutiable goods, $264,660; free goods, $40,726; total, $305,386; and her exports $65,304. The import duties received amounted to $78,787, as compared with $70,244 in August last year. The bank clearings for the month were $2,933,511, which is an increase over any previous August.

Good news comes from New Brunswick to the effect that copious rains have broken the drought throughout the province. Lumbermen are confident that enough rain fell to stamp out the forest fires and put an end to the work of destruction that has been going on for weeks. There will also, it is said, likely be a sufficient rise of water to float the several million feet of logs scattered along the St. John river within boom limits.

The Ontario Agricultural Bureau says that where co-operative associations have been formed to handle fruit crops, and particularly at Chatham, Forest, and Walkerton, excellent prices have been obtained for this year's apple crop. These societies have had their agents go through Manitoba and the West, who have sold the crop direct to wholesalers for cash. In the eastern part of Ontario the apple crop is almost perfectly clean, though the codling moth has caused some annoyance.

It is stated by a Nova Scotia despatch of 11th instant that the Dominion Antimony Company, which is largely composed of St. John men, and owns property at West Gore, Hants County, has decided to award a contract for erecting a complete plant at the mine. This will cost some $75,000, and work is to be commenced this fall.

The output from the Dominion Coal Company collieries for the month of August is declared to have been a most satisfactory one, totalling 329,172 tons, distributed among eight collieries.

Mercantile Summary.

The capital stock of the Canada Brass Rolling Mills Co., Limited, Toronto, has been increased from $200,000 to $500,000.

The following assignments took place this week: McLean & Tapling, blacksmiths of Southampton, and J. H. Thompson, cheese manufacurer of Amaranth.

According to a Board of Trade return in England, Canada received 85,755 immigrants for the eight months ending August 31, while Australia and New Zealand received only 8,083.

The assets of the Canada Launch and Engine Works, of Toronto, are being advertised for sale. They are placed at $28,739 in value, while the liabilities are $17,405. Unfortunately, after spending large sums on expensive machinery they appear to have cramped themselves for working capital.

Subjects which the Vancouver Board of Trade has been debating at its monthly meeting are the approaching meetings of the Railway Commission and the Tariff Commission; the Congress of Chambers of Commerce of the Empire, and the appointment of a committee to act in conjunction with the committee recently appointed by the City Council for the promotion of industries in the city.

The Arbuthnott, McMillan & Co., Limited, of Toronto, a printing house, has assigned to E. R. C. Clarkson, with liabilities of somewhere about $8,000. The assets, which were advertised to be tendered the 15th inst., are placed at $10,960, of which $10,750 is in machinery and plant and the pitiful sum of $200 in stock on hand. They had also $300 worth of work on hand when they stopped. The prospects of dividend are slender.

Mr. Trout has sent us a copy of the literature issued by the Canadian Government at the Liege Exhibition, referred to in his letter. It consists of a 64-page book with a Mercator's map on one cover and pictures of our various legislative buildings on the other. It contains maps of the provinces, pictures of all parts of Canada, many statistics, and diagrams to illustrate the statistics. In fact it is a readable, valuable publication, and reflects credit on Hon. Mr. Sifton, whose name it bears, and his assistants in the Department of Interior. The little maps, showing prominent towns and their surroundings, are especially interesting.

* * *

—A friend of the editor writes from Boston, where he resides, a most enthusiastic letter telling of his arrival home from a glorious trip as far as Portland, Oregon, through Washington State and British Columbia. He travelled over the C.P.R., with stops here and there, and camping out occasionally at Glacier, Field, Emerald Lake, the Yoho Valley, and Laggan, and beautiful Lake Louise. Camped for two weeks on the slope of Mount Rainier, near the great snow fields, 80 miles from Tacoma. He declares that there is nothing anywhere to beat this trip, and advises lovers of natural beauty to take it.

TENDERS
FOR
Binder Twine Plant AND Property

Tenders will be received by the undersigned for the following property:

The whole plant, including Factory, Warehouse, Machinery and 16 lots. Tenders must be in the hands of the undersigned by 8 P. M. Sept. 25th, 1905.

The property consists of a brick Binder Twine Factory and Machinery and Plant with the capacity of three tons of twine per ten hours, with the necessary Spinning and Winding Machinery. There are also two boilers and an Engine of 100 horse power capacity, a Frame Warehouse — capacity one thousand tons — and 16 lots situated in the centre of the City of Brandon. The Plant has most convenient railway facilities for shipping and receiving of goods. This plant is situated in the midst of a great consuming population which is annually increasing, and the market for the product of this factory is at its doors.

Each tender must be accompanied by an accepted cheque, payable to the Bank of British North America, equal to 10 per cent. of the amount tendered, and which will be applied upon the purchase money in case the tender is accepted, or will be forfeited to the Company in case the tender is accepted and the purchase for any reason is not carried out by the Purchaser. Each tender must state terms of payment proposed, and any other special terms he desires. Rate of interest will be 6 per cent. upon deferred payments.

Tenders will be received for the whole or portions of the property. The highest or any tender not necessarily accepted.

For further particulars, terms and conditions apply to

The Brandon Binder Twine Co.,
LIMITED,
P. O. Box 923,
Brandon, Manitoba.

Factory at BRANTFORD.

ELECTRIC POWER AT NIAGARA.

The Iron Age reminds us that on August 26, ten years ago, the Niagara Falls Power Company sent out its initial supply of electric power to its first customer, the Pittsburg Reduction Company. This was for the operation of the upper plant of the Reduction Company, which was the first factory to be located on the power company's lands. "The second block of power was supplied to the Carborundum Company about a month later. To-day the power company's consumers are numbered by the hundred, nearly all the factories of Niagara Falls and many in Buffalo and intervening points being operated by this company's power. The electric power development has resulted in the location of many new electro-chemical industries in proximity to the Falls, and has doubled the population of the city. The original capacity of the power plant was 50,000 electrical horsepower, which has since been doubled. In addition to the Niagara Falls Power Company, two other power companies have come into existence on the American side, and three on the Canadian side of the river."

⁂

THE RETORT COURTEOUS.

"Is any one waiting on you?" finally asked the haughty saleslady, condescending at last to notice the shopping person.

"I'm afraid not," replied the latter. "My husband was—I left him outside—but I'm afraid he's become disgusted and gone home."—Philadelphia Press.

⁂

THE MODERN MAN.

The complexity, not to say the artificiality, of modern life is thus satirized by Charles E. Jenningham in London Truth.

The mechanical peril is a difficulty which has not escaped the attention of the present Parliament. The special commission which was recently appointed to enquire into the matter has issued an interim report, and the following evidence of one of the witnesses examined is of especial interest.

Q.—Can you write? A.—No; I use a typewriter.

Q.—Can you sing? A.—No; I use a phonograph.

Q.—Can you play any musical instruments? A.—No; I use the pianola.

Q.—Can you sew? A.—No; I use a sewing machine.

Q.—Can you draw? A.—No; I use a kodak.

Q.—Can you walk? A.—No; I use a bicycle, a motor car, a tram car or train.

Q.—Can you see? A.—No; I use glasses.

Q.—Can you hear? A.—No; I use a trumpet.

Q.—Can you digest? A.—No; I use digestives.

Q.—Can you sleep? A.—No; I use narcotics.

OUR TRUCKS are fitted with rubber tires that do not come off. . . . .

MONTEITH, NIXON & Co.,

MAKERS OF GOOD TRUCKS.
256 Macdonell Avenue, Toronto.
Telephone, Park 1318.

Q.—Can you form an independent political, literary, artistic or ordinary opinion? A.—No; I belong to an "organized" political party and take my opinions in this direction from the wirepullers. As regards literature and arts, I receive my impressions of those matters from the reviews in the newspapers, and in ordinary circumstances I follow general public opinion.

Q.—Can you breathe? A.—No; I use artificial respiration.

Take away from the man of 2,005 his typewriter, phonograph, pianola, kodak, bicycle, motor car, train, sewing machine, spectacles, digestives, narcotics and newspapers and he will be an utterly helpless creature!

⁂

NOT THE SAME.

A young woman, who has recently taken charge of a kindergarten, entered a trolley car the other day, and as she took her seat smiled pleasantly at a gentleman sitting opposite. He raised his hat, but it was evident that he did not know her.

Realizing her error, she said, in tones audible throughout the entire car:

"O, please excuse me! I mistook you for the father of two of my children!"

She left the car at the next corner.—New York Sun.

⁂

CO-OPERATIVE EXHIBITION.

The London correspondent of the Montreal Gazette describes a recent notable week among the British Co-operators, whose interesting Industrial Exhibition was opened at the Crystal Palace on Wednesday, 23rd August, by Mr. Will Crooks, M.P., a man who represents all that is best in the British working man, and whose remarkable career devoted to the public service as poor law guardian, Mayor of Poplar, county councillor and M.P., entitles him to give advice to his fellow workers. He sees that in the industrial world, the private employer is going out, and the joint stock company is coming in, and that the workers, if they would hold their own against the soulless greed of the great companies, must co-operate and form industrial partnerships. Trade Unionists, he remarked, are learning that it is better to start workshops of their own than to spend their money on strikes.

The Industrial co-operative movement in Great Britain has been comparatively slow but its prospects are encouraging. It has now 150 associations for the manufacture of goods valued at £4,000-000 a year, and in which there is a capital of £1,700,000, profitably engaged. Mr. Crooks warned the working people of this country that they could only prosper on their own account when they ceased the habit of thinking that everybody was seeking to exploit their labor and to take advantage of them. They must trust one another more, and they must give up the notion which some workers and employers alike had —that the worker existed for what other people could get out of them. Co-operators can only succeed when they combine the skill of the artisan with the business sagacity of the professional trader.

* * *

—According to the World's compilation, there was an increase in the number of hogs received at the city and Junction cattle yards last week as compared with the like week last year, but a decrease in the number of cattle and sheep. Here are the figures. Week ending September 2nd, 1905, 4,494 cattle, 3,152 hogs, 6,242 sheep; corresponding week last year, 4,999 cattle, 2,672 hogs, 6,246 sheep.

* * *

OUR NEW AND GROWING WEST.

The impression made upon a new visitor to the plains and prairies of Western Canada is well illustrated by an enthusiastic writer from Ontario, who sends to the editor a private letter descriptive of his experiences and feelings in Saskatchewan and Alberta. He writes from Calgary on September 6th. We append an extract:

"There have been so many things to do and see and talk about since I arrived in this country, and I have been so much on my feet, or on and behind horses, or other means of locomotion, that opportunities to write East seem few and far between. But I am enjoying the trip immensely, and am most distinctly seeing the country. Am now back in Calgary, but in the meanwhile have driven—generally by the way in company with one or more Americans, who, without a doubt, are the pick of the incoming settlers here—in all directions around Edmonton, Red Deer, Calgary, and Southern Alberta; have also made many varied trips in the Rockies, including a partial ascent of the Cascade Mountain; have talked with I don't know how many dozens of people of all sorts, types, and classes; have ridden a broncho over the wild and woolly plains into the ranching country and mixed with cowboys and been treated splendidly; have had some inspiring gallops along the foothills, and, in fact, have had a magnificent time generally. My opinion already is that you just have to be an optimist respecting the West; discount the enthusiasm of the people as one may, the fact remains that the land is here; such land that practically any imaginable development can take place and be based on it with safety, in the long run at any rate."

* * *

TORONTO MARKETS.

Toronto, Sept. 13.

Dairy Produce.—There is a good demand for butter, and also a good supply; prices are being well maintained. Pound rolls are jobbed at 20 to 21c.; good to choice 18 to 19c.; and inferior 15 to 16c. Ceramery prints sell at from 23 to 24c., and solids at 22 to 23c. Eggs are in large supply and prices weaker; case lots sell at 18c. per dozen, and splits at 15½ to 16c. There is not much doing just now in cheese; prices are unchanged at 11½ to 12c.; twins 12c.

Fruit.—On two or three occasions this week the supplies of fruit have not been quite so heavy as is usual at this time of year, as picking has been stayed to some extent by the prevalence of rain throughout Ontario. This, however, means that supplies will be heavier, as the fruit must be picked soon. Prices are variable, and quotations can be only approximately correct. For example peaches are quoted all the way from 25c. to $1, and for extra choice $1.15. California peaches are quoted from $1.50 to $2 per case. Plums are 20 to 30c.; watermelons, 25 to 35c.; tomatoes, 10 to 20c.; apples, 15 to 30c.; corn, 4 to 6c.; bananas are $1.50 to $2 per bunch; pears, 15 to 25c.; Champion grapes are worth from 16 to 35c. But as large supplies of many of these lines may be expected by every train or boat these figures are liable to very sudden changes.

Hog Products.—There is a fair supply of dressed hogs and prices are steady and unchanged. A good demand exists for cured meats at the following prices: Long clear bacon, 11½ to 12c. in case lots; mess pork, $18; short cut, from $22 to $22.50. Light to medium hams, 14 to 14½c.; heavy, 13c.; rolls, 12c.; shoulders, 11c.; backs, 15 to 16c.; breakfast bacon, 14 to 15c. Lard is quiet and quotations are unchanged; tierces are quoted at 10¼c.; tubs at 10½c.; and pails at 10½ to 10¾c.

Live Stock.—Fair enquiry has prevailed this week at the Western Cattle Market for good to choice export cattle, and prices have been firmer at from $4.25 to $4.65 per cwt. for exporters, and from $3.50 to $4.25 for good to choice butcher's cattle; prices would have gone higher if there had not been an undue porportion of inferior cattle among the receipts, which have been liberal. Hogs are weaker at $6.12½ for selects, and 25c. less for light and fat. Lambs are weaker on account of large receipts; lambs are worth from $5 to $5.50 per cwt. There is a fair enquiry for stockers and feeders of the right kind. A few good milch cows are wanted. There is no change in sheep. Good to choice lambs are selling well.

Leather.—A good steady movement is setting in and prices are firmer, and harness leathers are advancing. In some lines a shortage is said to be probable. Prospects for the fall trade are good.

Hides and Wool.—Owing to the continuance of local competition quotations are a little unsettled, and some dealers are paying from 1 to 1½c. less than are others. No. 1 steer hides are

The Aim of the Great-West Life Management has been to adapt their policies to the POLICYHOLDER'S point of view.

Liberality is the ruling principle.

SOLD BY ALL LEADING WHOLESALE HOUSES.

quoted at 18c., and No. 2 steers at 11½ to 12c. No. 1 cows are quoted at 11½c., and No. 2 cows at 10½c. Country dried stock is quoted at from 10 to 12c. There is a short supply of fleece wool and prices are fairly steady. For washed fleece the price is from 26 to 27c.; for unwashed the price is 16½ to 18c.; pulled supers are quoted at 27 to 29c., and extras at from 28 to 30c. There is a good market for calf skins, and prices are steady at from 13 to 14c. for No. 1, the latter price is exceptional, but is being paid; for No. 2 the price is from 11 to 12c.; deacons are quoted from 70 to 90c. Lamb skins and pelts are both firm at 85c. Tallow is quiet; dealers are paying 4 to 4½c. for rendered; roughs are quoted at 2½c. Horse hair is 27c. In London to-day (Friday), choice Canadian cattle is selling at 6d. per pound; refrigerator beef is quoted at 4 to 4½d. per pound.

Seeds.—There is not much doing just now in alsike. Receipts are small, as the farmers are pretty well occupied. The price ranges from $4 to $6 per bushel. Red clover is quoted at from $5.40 to $6. Machine threshed timothy is quoted at $1.15 to $1.35, and choice unhulled flail-threshed at from $1.60 to $2.

Breadstuffs.—There is little doing in Ontario grades of wheat, and prices are steady and practically unchanged. Some inquiry for No. 2 white has made the price a little firmer, and sales are reported at 74 and 74½c., with 75c. being asked. No. 2 red and mixed are quoted at 73½ to 74c., outside; goose and spring are quoted at 70c. Manitoba wheat is easier, at 94½c. for No. 1 Northern, Georgian Bay ports; No. 2 Northern is quoted at 91½c.

Flour.—Ontario.—The market is quiet. For 90 per cent. patents (buyers' bags), for export, $3 was bid and $3.05 was asked. Manitoba is unsettled; first patents, $5.20 to $5.30; seconds, $4.90 to $5; bakers, $4.80 to $4.90.

Millfeed.—Bran is unchanged, at $12 per ton in car lots, outside; shorts are $16.50 to $18. Manitoba bran is $16 to $17; shorts are $19 to $20 at Toronto and equal points.

Oats.—The market is quiet, with a fair enquiry; prices are steady; No. 2 white is quoted at 27½ to 28½c., at outside points. Barley, only an ordinary movement; new barley is quoted at 38 to 44c., outside. Peas, there is no change; new peas are quoted at 65 to 66c., with 67c. for extra choice, outside. Rye is firm outside, at 56 to 57c. per bushel. For Canadian corn the market is quiet, and prices are nominal. American is quoted at 61½c. for No. 3 yellow, and at 62c. for No. 2 yellow (lake and rail freights). Rolled oats, for barrels in car lots on the track here, the price is $4.75 and $4.50 for bags; for broken lots here 25c. more, and 40c. outside.

Groceries.—Trade is fair; prices are steady and generally unchanged. Sugars are quoted as follows: Montreal, granulated, in barrels, $4.88; Acadia, $4.83; Ontario beet, $4.83; Phoenix, $4.83; yellow, $4.38 to $4.68. In bags, Montreal and Ontario Sugar Co., 5c. less than in bbls. Coffee, Havre, unchanged. Hamburg unchanged to ¼c. lower. Receipts, 77,000 bags, against 81,000 bags a year ago. The only thing of consequence in groceries this week has been the fixing of prices for canned corn and tomatoes. The Aylmer and Red Feather brands are quoted at 85c. per dozen for corn, and 95c. for tomatoes. Delhi, Kent, Thistle, and Simcoe brands are quoted 2½c. less. The packs are heavy, and of good quality, and orders are large. There is a fair demand for both tea and sugar; Japan teas are firm. In all the staple lines of groceries prices are steady and well maintained. There is no change in the quotations for dried fruits, but prices are steady.

Potatoes.—Potatoes are in liberal supply, and are quoted at from 40 to 50c. per bushel; for sweet potatoes quotations are from $3.50 to $3.75 per barrel.

DELAYS ARE DANGEROUS.

The Accident and Sickness Policies

A. G. C. DINNICK, Managing Director.

MONTREAL MARKETS.

Montreal, 13th September, 1905.

Ashes.—Owing to the extremely limited supplies reaching here of late values have stiffened notably, and for first quality pots of good tares buyers are prepared to pay $5.25 to $5.27 per cental; seconds, about $4.75. A few barrels of pearls came to hand last week, realizing $7.75, and present quotations would range from figures named to $8 per cental.

Dairy Products.—Values in both cheese and butter are quite easier, while the British demand for the former article has for the moment practically fallen away to nothing, creating somewhat of a feeling of depression among local shippers. Last week's exports of cheese were only 46,286 boxes, these figures giving a fair indication of the decline in activity. Finest Western cheese is quoted around 11½c., but this is more or less a nominal figure. The shipments of butter last week were 20,178 packages. About 21½c. per lb. appears to be about the idea of buyers for finest creamery, though holders seem indisposed to consider this figure.

Dry Goods.—Wholesale business is more active. Since last writing visiting buyers have been noticed among the warehouses in goodly number, some of them being from quite a distance, and a number of good house orders are reported. Travellers on the road are also doing rather more in the way of sorting business. Nothing new is reported this week with regard to values of textiles.

Groceries.—In this line the distribution countrywards is of a more liberal character. As regards values the one notable feature is the decline of ten cents a cental on all grades of refined sugars, owing to a weaker market in New York and elsewhere. The refinery quotation for standard granulated is now $4.80 in barrels, with yellows rang-

ing from $4.30 to $4.70. First lots of new Valencia raisins are due here, via Liverpool, early next week, and are quoted at about 6c. for fine off-stalk, and 6½ to 6¾c. for selected; full stocks by direct boat will not reach here till next month.

Hides.—Receipts of beef hides, which continue light, are readily bought up by tanners, and while the association quotation for No. 1 is nominally 11c., as high as 12c., or even a shade over is being paid in some cases.

Metals and Hardware.—There have been no recent noteworthy changes in values. Ingot tin is about half a cent easier, at 36 to 36½c.; spelter firm at 6¼ to 6½c.; antimony, 14½ to 15c.; lead, $3.75 to $3.80. The demand for pig-iron is not specially active, and quotations are about steady, at $19 for best domestic brands, and $18.25 for No. 2 selected Summerlee. Bars remain at $1.75 to $1.80; wire nails, $2 to $2.05. The demand for barb wire is over for the season. Tinplates, Canada's, etc., remain as quoted last week; Ternes, $6.25 to $6.50; galvanized sheets, $4.15 to $4.25.

Oils and Paints.—The great scarcity of window glass, as noted last week, has led to an advance in price, first break per 100 feet being now quoted at $4 instead of $3.75 as heretofore; other grades in proportion. Turpentine is firmer at 91c. in single barrels. Pure white lead, $5.25; putty, $1.40 in bulk. Shellacs are firmer by 5 to 10c. a gallon, owing to higher prices of gum.

Wool.—The market is still of a waiting character, and millmen are buying only in small lots for immediate wants. While the consummation of peace may tend to some weakening in the commoner grades of wool, it appears to be the opinion that the finer grades will continue to stiffen. Local importers quote Capes at 18 to 24c.; fine B.A. scoured is hard to get, and is firmer at 39 to 43c.; of Australian and North-West there is little here; domestic pulled, 30 to 33c.

⁂

W. F. Cockshutt & Co., hardware merchants, Brantford, have sold to G. W. Serles.

The independent telephone line between Bancroft, Coehill, Madoc, Eldorada and Marmora has been sold to the Bell Telephone Company.

The building permits in Toronto for the past eight months totalled $7,068,000, as compared with $4,010,000 for the same period last year.

The Customs' duties collected in Toronto during August totalled $1,000,437.08, a decrease of $23,549.74 as compared with the same month last year.

In some instances the Provincial Government [of British Columbia], exhibits considerable laxity in paying its employees. We know of a case where a man worked on the repair of roads and trails some four months ago and has not yet received his wages for the service rendered. The same feature exists in the payment of store accounts. The Government should set a good example by paying its bills when they become due.—Camborne Miner.

The Italian Government has notified the acting consul at Montreal of the appointment of a commercial delegate, who will look after the interests of Italian trade in the Dominion.

At a conference of the Association of British Chambers of Commerce, the Quebec tax on commercial travellers was denounced as obnoxious, and in its effect was likened to Yorkshire taxing travellers from Lancashire. This latter is apt. The impost actually amounts to Quebec taxing travellers from Ontario.—Gazette, Montreal.

The Western Canada Milling Co., Montreal, have let the contract to Jas. Stewart & Co., Pittsburg, for the erection of a flouring plant in Montreal to cost between $550,000 and $600,000. The buildings will be concrete-steel construction, and the plant will have a capacity of 5,000 barrels per day.

⁂

—"Well, dat is an after-dinner cigar." "What have I to do with it?" snapped the woman, who was killing potato bugs. "Why, mum, I thought perhaps yer would give me a dinner so I can smoke de cigar."—Chicago News.

⁂

"Yes, sir," says the man with the determined air, "I heard my boy using slang last week, and I soon put a stop to it."

"Children are apt to pick up slang expressions very readily," soothingly says the man with the benignant look.

"Well, I didn't bother about investigating as to where he got on to such a line of talk. I just trotted the youngster into the bedroom, took up my slipper, and told him this slangy way of handing out conversation didn't go in my neck of the woods, and he had to cut it out forthwith or else he would get what was coming to him. And you can bet your life he laid down his hand right away."—Pittsburg Despatch.

THE TORONTO INDUSTRIAL FAIR.

—There is no doubt of the success of the Toronto Industrial Fair of 1905 in attracting a great gathering of people. And it appears to be true that it has drawn more people than any previous year. The final accounts are not made up, but it is certain that a good monetary profit has been secured. The number present on the opening day was quite unprecedented. The nearest compilation thus far made of the attendance is as follows:—

First week—	1904.	1905.
Tuesday	17,000	60,000
Wednesday	44,646	70,000
Thursday	26,396	56,000
Friday	25,511	40,000
Saturday	41,920	55,000
Second week—		
Monday	103,550	118,000
Tuesday	58,600	75,000
Wednesday	83,400	90,000
Thursday	64,300	80,000
Friday	55,800	47,000
Saturday	55,000	30,000
Totals	576,123	721,000

⁂

TRADE WITH THE PACIFIC.

A subscriber in Fort William expresses his impatience at the slow growth of Canadian export trade via the Pacific, and thinks we ought to be doing many times the business we do in this direction. We would remind him that such a trade must grow slowly. For one thing, Canadians have a lot to learn about the proper way to do export trade. And for another, the home trade is so active that exports are comparatively neglected by our manufacturers. It is of interest to remark that from eighteen hundred to two thousand tons of general merchandise was carried from Vancouver by the steamship Manuka when she sailed for Sydney, Australia, on August 18th. She was a full ship, and practically every ton of stuff she took from Vancouver was of Canadian manufacture. The Commercial understands that from

Head Offices—Queen City Chambers, Toronto

SCOTT & WALMSLEY,
ESTABLISHED 1858.
Managers and Underwriters.

450 to 500 tons of agricultural machinery of Eastern Canadian manufacture was sent to Sydney on the Manuka.

Several tons of salmon of this season's pack was shipped to Sydney. Nearly all this salmon was from the Skeena River, as the fish from that stream have found more favor with the Australians than the fish from the Fraser

Other articles of export by the same steamer were news paper from the pulp and paper mills of Quebec, rye whisky from the distilleries of Ontario, furniture from Ontario, and computing scales and other weighing machinery from the same province.

UNITED STATES CROPS.

A Record-Breaking Yield of Corn.

There appears to be no doubt that this year's crop of Indian corn in the United States will be the largest on record, and it is greatly in excess of that of last year. The estimate of the New York Produce Exchange is 2,716,918,000 bushels, as compared with an estimate of 2,698,117,000 bushels based on the August report. The actual yield last year was 2,407,480,000 bushels. Based on the figures contained in the United States Government crop report issued on Tuesday last, the Produce Exchange estimates the total wheat crop at 704,447,000 bushels, as compared with an estimate of 14,000,000 bushels more based on the August report.

The yield of oats is estimated at 930,317,00 bushels, as against a yield last year of 894,595,000 bushels.

The tables below give areas and yields for several years past:—

Corn.

	Area.	Yield.
Est. Sept., 1905	94,011,000	2,716,918,000
Actual, 1904	92,231,000	2,407,480,000

* * *

RUSSIAN TRADE WORTH HAVING.

"Russia could not have done a wiser or a more graceful thing at this time than to have removed the retaliatory duties on American machinery," said Mr. P. M. Brotherhood, the head of the export department of Manning, Maxwell & Moore, yesterday. "A better trade feeling will be engendered, which undoubtedly will lead to a much larger business with the Czar's subjects in the years to come. While from our standpoint the Russian demand for American machinery has been comparatively insignificant—three or four millions of dollars' worth a year—the possibilities in every line are extremely tempting and will be easy of development under present conditions.

"Heretofore the Russian market has been supplied by the manufacturers of France and Germany. This was perfectly natural, as it was to those countries that Russia looked for ready money to supply governmental and private needs. Thanks to President Roosevelt, and the workings of European politics, the situation is now entirely changed."

President Saunders, of the Ingersoll-Sergeant Drill Co., believes that the good results of the Czar's action through M. Witte will be far-reaching in its effects—in fact, will open up to American manufacturers a new and broad market for all manner and kinds of products.

"I have always had a higher opinion of the Russian market than many other American manufacturers," said Mr. Saunders yesterday. The Government figures of exports to European Russia for the year 1899-1900 were understated, as numerous shipments went to that country by way of England, Denmark, or Germany, that never appeared in our statistics under the heading of "Exports to Russia." A large portion of the goods intended for Russia go to Hamburg, not on a "through" but on a port bill of lading, and are trans-shipped from Hamburg either by rail or by steamer—a fact that it is true much more in articles of manufacture like steel and iron goods than in staples like cotton, etc.—New York Journal of Commerce, 13th.

"MUST DIE TO WIN."

Wrong! Endowment Insurance enables you "to win" during your lifetime, at the end of 10, 15, 20 or 25 years, as you may select, and to enjoy the fruits of your savings for the rest of your life. It may do more. An Endowment Policy in

The Mutual Life Assurance Co. OF CANADA.

should you not outlive the term selected, will enable your wife and children, or dependent loved ones, "to win" a competence and thus protect them from the "cold charity of a pitiless world."

Workman's Rights.

In Canada a workman may proceed against his employer under the Workman's Compensation for Injuries Act, and at common law. That means untold annoyance and inconvenience to an employer. An employer is even liable for damages to an employee for injury resulting from the negligence of a fellow employee. Oft-times a workman will get back at an employer in this way. The employee may or may not win. Whether he does or not it means a great deal of anxiety to you as an employer. Let us relieve you of all this. Our liability policies are designed to do this very thing.

Will be glad to explain our plan.

THE METROPOLITAN LIFE INSURANCE CO.

(INCORPORATED BY THE STATE OF NEW YORK.)

The Company OF the People, BY the People, FOR the People.

ASSETS, $128,094,315.24

Proof of Public Confidence

This Company has more premium-paying business in force in the United States than any other Company, and for each of the last 11 Years has had more New Insurance accepted and issued in America than any other Company.

The Number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec and Ottawa.

Significant Facts

This Company's Policy-claims paid in 1904 averaged in number one for each minute and a quarter of each business day of 8 hours each, and, in amount, $102.54 a minute the year through.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1904.

391	per day in number of Claims Paid.
6,561	per day in number of Policies Issued.
$1,426,700.50	per day in New Insurance Written.
$114,060.67	per day in Payments to Policy-holders and addition to Reserve
$73,326.8	per day in Increase of Assets.

A RECENT CONFLICT WITH LABOR.

The Gurney Foundry Company, of Toronto, has recently concluded a series of actions against its union employees, in which the company has apparently been entirely successful, and which has presented certain novel features of procedure on the part of the unions. Not being content with watching and besetting the Gurney factory so as to intimidate the remaining employees, and induce them also to desert, not being content either to adopt the other usual means of fighting, they endeavored to reach the Gurney company in a much more radical way, and thus compel it to capitulate.

The means adopted were to approach the dealers throughout the country who handled Gurney products, and by distributing among them circulars, placards, posters and other printed matter induce many of such dealers to cease buying Gurney's goods. This printed matter set out that the goods of this company were manufactured by incompetent workmen, that their goods were unfair, and so on, and, although fair comments in this way on the quality of goods made might not have been wrongful, yet the unions in this case did not stop at that, but inserted further libellous and damaging matter therein. The thing finally became so serious that the Gurney Foundry Company applied in the case of Gurney vs. McGlashan for an injunction restraining the further publication and dissemination of these practically trade libels, and at the same time asked damages for loss of business caused thereby.

This case finally reached trial in St. Catharines about June of the present year, and the jury found that the plaintiffs had been damaged, and assessed the damages at $1,500 on this particular charge. The question of whether or not the legal responsibility for such damage could be fixed on the members of the union sued, and on the members themselves, was reserved to be argued in Toronto, and this has not yet been done. It would appear, however, that in this case the Gurney company has been eminently successful, and as a result of this success another similar case which they were prosecuting concurrently with it, was disposed of without trial.

This case, Gurney vs. Emmett *et al* and the "Toiler" Publishing Company, was based on practically a similar set of facts, except that not only the workmen themselves, but the printing company which printed the circulars were asked to be enjoined. Profiting by the recent decision of the courts in the protracted struggle of the Metallic Roofing Company vs. United Sheet Metal Workers, in which the plaintiffs spent a couple of years before they discovered a legal means of suing the union at all, the Gurney company first obtained an order of the court allowing it to sue a series of individual members and officers of the union, "who were to represent and defend for themselves and for all other members of the trade unions and organizations to which they belong." A trade union not being a legal corporation or an individual, it was not a "persona" known to the law, and, therefore, could not be sued, until one of our judges discovered that our Ontario Judicature Act contained a rule allowing it to be sued in a representative action, and this method has now been adopted.

In this case also an injunction was asked restraining these wrongful acts, and the union finally consented to judgment being entered against it without trial, apparently profiting by its experience in the McGlashan case. The result of the action as far as the Gurney Foundry Company is concerned may be summed up in the judgment delivered by Mr. Justice Magee:

"This court doth order that the defendants be, and they are hereby restrained from issuing, publishing and circulating placards, posters, circulars, handbills and printed matter complained of in this action, or any like produced. This court doth further order that the defendants be, and they are hereby restrained from interfering with and intimidating the plaintiff's workmen and agents, and wrongfully persuading them to break their contracts of employment, and wrongfully preventing, procuring or persuading workmen or agents from taking employment from the plaintiffs, and from wrongfully and maliciously watching and besetting the railway stations and approaches to the plaintiffs' factory for such purposes, and from wrongfully and maliciously interfering with and intimidating the plaintiffs' customers, and persuading them to break their contracts, and not buy the plaintiffs' goods, and from publishing and advertising of the plaintiffs that their goods were unfair, and that their goods were made by incompetent workmen, and from wrongfully and maliciously conspiring for any of the above purposes."

The Gurney Foundry Company are to be congratulated on their successfully sustained effort to crush a new feature of trade union tyranny. This fortunate issue will not only be appreciated by their brother manufacturers, but will be welcomed and upheld by the public sense of what is right and fair as opposed to what is narrow and treacherous. The unions are not disposed to "fight fair," but now that they have to, and now that they are checked in their underhand tactics, they may learn how to treat employers reasonably.

* * *

WESTERN WHOLESALE TRADE.

While qualified men in the Eastern Provinces are giving Western merchants from time to time undoubtedly good advice, the truth of the matter is that a very considerable divergence exists between the viewpoints of the East and of the West. The continuation of such a discrepancy of attitudes will inevitably prevent even the attempt to come together so long particularly as the said divergence remains unrecognized; and it will not be unfitting, therefore, to make some effort to describe wherein the chief root of difference exists.

Let it be understood, then, that the West, like other new communities, is peculiarly sensitive—we will not say wrongly so—to the manner in which it is regarded by other sections. And what the West has fixed very strongly in its mind is an idea that Eastern merchants are very kind and amiable to it during bright weather, but that when the clouds come and stormy conditions are foretold, then they are apt to draw in their purse-strings and allow the West to fight its own battles. The West, however, is a lusty youth, and so it says to the East: "Very well; if your wholesalers frown at us in that way we can manage very well without your aid. Your chilly attitude will simply drive us retailers to depend more and more upon our own establishments, where, rightly speaking, our business belongs; and the consequences will be of your own making."

Another accusation on a par with this is the charge that the average Eastern man does not understand the West; that, indeed, he has an apparently ineradicable misunderstanding of it. Without a doubt there is some truth in this allegation; the East, more's the pity, does not, perhaps cannot, grasp the aspirations of her great younger brother. Therefore, many things are thought and done and without hesitation acted on in the West that the Easterner does not sympathize with, and looks at at a wrong focus. The West is patriotic enough; but it does not relish being made the tail of the kite. In fact, ask many a Western man, and he will tell you that present Eastern prosperity is itself but the tail-end, the effect, of the marvellous development of and immigration into the West. The West means that Canada shall become a great nation, but it will needs be on Western lines, not founded on the "somewhat stagnant methods" of the East.

So much for the Western point of view. That of the East, so far as its treatment of Western merchants is concerned, is diametrically opposed. In fact, while it believes itself to be a firm admirer of the marvellous growth of the West, it yet considers that a very large proportion of that growth has been due to the former's own efforts, and it reflects that the West must be somewhat inclined to ingratitude when it questions that allegation. The East, too, sees that a large amount of its hard-earned money has been locked up in the West, while the Westerner, with all his prosperity, has been simply using money with which he should pay off his debts for the purposes of his own gain in land speculation. On the whole, the advice which has been so ably given, for the West to devote the proceeds from its present huge crop, not in further speculations but in wiping off the slate past accounts, does not appear unreasonable. But the lack of understanding of the aspirations of the West by the average man of Eastern Canada is a feature which the latter should endeavor to rid himself of as early as possible, both for the benefit of the whole Dominion and for his personal interest. And in no way can he learn what that region and its people are like so well as by going out there.

* * *

MR. GEORGE'S ADDRESS.

To those who heard him on so many auspicious occasions during the recent visit of the Canadian manufacturers to Britain, the capable presidential address of Mr. W. K. George at the annual meeting this week in Quebec, an address which presented so many topics concisely and yet covered the ground so well, will come without any elements of surprise. His broad outlook on the situation, which we may say in this connection is not fully shared by *all* the members of the association, has already had its good effects in a lessening of the suspicion with which this important body's opinions are regarded in some quarters.

Mr. George prefaced his remarks happily with an allusion to the harmonious relations now existing between the French and English peoples, that is to say in Europe, for fortunately the remark is one that need not be made in our own country. Naturally, he could but refer to the continued remarkable prosperity enjoyed by the Dominion during the past year, a prosperity which, it may be added, while based primarily on good crops and on the wonderful development of the West, has been added to not immaterially by the enterprise and energy of our captains of industry.

Mr. George considered it an unhealthy condition when, as was the fact just announced regarding the last fiscal year, exports had decreased by ten million dollars, and imports had increased by two and a half millions. It is true that economists point out that this so-called adverse balance of trade is really not adverse at all, but Mr. George qualified his statement as to unhealthiness by alluding to this growing excess of imports in connection with a *young country*, such as Canada is. And certainly it is difficult to see where the benefits alleged by the orthodox economists are to come in, nor in what satisfactory way Canadians are to pay, with profit to themselves, for that excess. We are treading on difficult ground, however; and, as Mr. George himself did not go very deeply into the ins and outs of the question, we may perhaps be excused likewise.

Of course, the chief point of the address, as with most other presidential addresses before the Canadian Manufacturers' Association of recent years, was in connection with the tariff. Satisfaction was expressed with the fact that the Dominion Government is now taking evidence for the avowed purpose of making a thorough revision of the tariff. "I believe," said Mr. George, "that by a just, wise and careful revision, calculated to meet present-day conditions, an immense impetus will be given to our industrial life, which will be beneficial to all and detrimental to none of our people." He dwelt, too, on the fact that tariff duties were now practically outside party politics, though to be sure that is a point on which many people would be found to disagree. Mr. George, however, believes that practically all Canadians recognize in the tariff a business and not a political proposition, calculated to attract capital and industry by taxing the manufacturers of the United States and elsewhere.

Be this as it may, the retiring president made out a case when he pointed out the difference in the attitudes of the two countries, Canada and the United States. To repeat his own words: "The people of the Republic to the south are a great people—their country is a great country. They have lived for themselves, and by their policy of protection have made wonderful progress. We, on the other hand, have stood by and watched them increase their tariff year by year, shutting out almost completely the products of Canada; we, too, have watched them year by year taking a greater advantage of our lower tariff, and sending more and more of their goods to Canada, thereby retarding the development of our industries. Last year we imported from the United States goods to the value of one hundred and sixty-two million dollars, or over 62 per cent. of our total importations."

Very emphatic was Mr. George in his opinion against the desirability of reciprocity with the United States. Canada now is striving to-day for the very results which the United States, by no means through reciprocity, has already achieved. Certainly, it would be rash at this time of day for Canada to enter the field against the established manufactures of that country. At the same time, it is to be noted that the speaker did not advocate a tariff policy similar to that of the United States. What is needed for Canada is, in his opinion, a tariff adapted to the needs and conditions of our own country, with which position surely but little fault can be found.

* * *

Business men in St. John, N.B., are talking of holding a merchants' week and carnival this fall. There has been but little in the way of attraction to outside visitors to the city this year, and it is believed that a merchants' week, with an attractive programme of entertainment, would create great enthusiasm.

COBALT AND THEREABOUT.

Premier Whitney has returned from a trip to what we usually call "New Ontario," and we read of an interview with him. So far as the resources of the district are concerned he appears to be well satisfied, and expresses confident hope for future development.

We are pleased to see that in speaking of mining in the district of Cobalt he uses very guarded language, quite different from that of the extremely sanguine correspondents of some of our journals. Very sagaciously he says: "It is almost too soon to say what the Cobalt mining district might develop into. Time alone will decide that."

While desirous of giving all reasonable encouragement to those who are earnestly endeavoring to develop the mineral resources of that part of the Province, we have felt it necessary to put forward a word of caution. And we repeat that caution this week. Considerable valuable ore has already been shipped from the town of Cobalt, and in some cases handsome profit has been made on the operation. Advantage of this fact has been taken by the "boomster," who is always on the alert to lure the unwary. We regret to see that one of our morning papers has given space for letters, which, while they give some information of value, yet contain statements which are tremendously exaggerated. By referring to the "Canadian Mining Review" for August, figures will there be found which have been obtained from official sources. Up to the middle of July the total value of shipments made from that locality is given at $1,245,000. This included cobalt ore, which was then valued at sixty cents a pound for the metal contained in the ore. The market for that mineral is already glutted, and it seems to be now doubtful whether cobalt will leave any profit after the cost of separation.

The ore found at Lake Temiskaming is of a very complex and refractory character, containing as it does cobalt, nickel, bismuth, arsenic, silver and iron. It is probable that some "wet process," as metallurgists call it, as distinct from smelting, may be employed; i.e., the metals may possibly be more advantageously dissolved and afterwards precipitated by some acids. At all events, the metallurgical problem in the present instance is by no means an easy one. So far, all of the veins worked have petered out at a depth of from forty to fifty feet, the only persistent one being the original discovery, called the "La Rose" mine, as we remarked last week. In this a shaft has been sunk to a depth of ninety feet, but the vein has split up into three branches. At the "Trethewey" mine at a depth of sixty feet there was still some vein matter in the shaft, but it carried no values. Those who are on the spot engaged in practical mining are now busy "rooting around" the neighborhood for new veins to give them employment for the winter.

The "boomster" is also busy at work exaggerating in every possible way the prospects already received, and there are indications of new mining companies being formed in Toronto, Ottawa and Montreal, presumably for operation in that region. There is really no necessity for working the public for one dollar of capital. The prospector, having found the vein, goes on with pick and shovel, and takes out metal enough to pay all current expenses. No mining plant is required other than these simple tools of the hand miner; therefore, the proposed big captalizing of some of those companies is altogether unnecessary; and a really good prospect requires no great capital for its development. As to the need of a smelter, there will naturally be need for a smelter in that locality before very long if development keeps up. There is very little doubt that there is abundance of mineral of various kinds in that rich neighborhood. But as to a smelter for cobalt ore alone, the man who proposed it cannot be aware how limited is the present use of the metal in the arts and manufactures, nor can he know much about the character of the Coleman ore or the difficulty of its reduction.

* * *

COUNTERFEIT LIFE INSURANCE.

A Fifteen Years' Record.

Continuing the record of statistics, begun last week, of assessment societies in the United States and Canada, we now add the figures of sixteen associations, which makes the number in the completed list thirty-two. It is worth noticing that only one society, the Sons of Scotland, shows a decrease in the cost per $1,000 for 1904 as compared with 1903. All the others show an increased cost of from ten cents to six dollars. We remind our readers that in these tables $4 has been added to the "net cost per $1,000" of each society to represent the average expenses.

Name and Date of Origin.	Year of Record.	No. of Members.	Cost per $1,000.	Year of Record.	No. of Members.	Cost per $1,000

Of the thirty-two societies, it will be seen that no less than eighteen have scored a decided decrease in membership, and one has been wound up—the American Legion of Honor, of Boston, Mass. It had 4,049 members left on hand when its affairs were put into the insolvency court. Counting them in, the decrease of members in nineteen societies has been 71,445. On the other hand, a few societies, twelve in number, have succeeded in making an increase of altogether 47,529. Of this number the Royal Arcanum is to be credited with 21,994 and the Independent Order of Foresters with 6,634. In both these cases the increase the previous year was very much greater, viz., 28,767 and 13,823.

Every one of the Ancient Order United Workmen lodges, Nos. 1 to 8, shows a decrease in membership. The greatest drop occurred in the neighboring State of Michigan with 5,413, and the next greatest, 3,649 at Buffalo, while Ontario also comes out 1,985 behind the previous year in present total membership. In the Ontario jurisdiction there were 1,924 who joined and 3,909 who dropped out. The death losses were $868,079, an increase of $125,279 above those of the previous year.. It is not surprising, therefore, that the membership still continues to decline. The number on the rolls July 1, 1905, is only 37,849. This shows a weaker condition by 8,276 members compared with the beginning of last year. A similar number going out each eighteen months would only take six or seven years to bring the last lingering thousand or less into view.

But something of the same sort is going on in the several United States Workmen jurisdictions. In Pittsburg, Penn., near the fountain head, they have now only 11,344 members, where they numbered 16,355 two years previously. And the Supreme Lodge jurisdiction, embracing all the States, with its head office at Meadville, Penn., shows a membership at close of last year of 323,393 as compared with 451,510 two years previously. In other words, 128,117 less, though upwards of 60,000 are recorded as having joined in the two years. This shows nearly 200,000 of a shrinkage, at which rate about four years would bring the bottom of the basket into view. Two years ago $110,019,000 of new certificates were taken, but last year only $25,897,395, and no doubt 1905 will show a still less demand for admittance. "Experience" is likely to prove a "dear schoolmaster" to a very large number of people in such rule-o'-thumb life insurance societies.

⁂

A FORESTRY CONVENTION.

The question of forestry, and the best means of conserving Canada's timber resources which that implies, is one that grows in importance with every year; moreover, what is very satisfactory, this importance is rapidly becoming better recognized, both by prominent men in Canadian life and by the community at large. Sir Wilfrid Laurier is one of those who have been particularly impressed with the serious issues which depend on a due attention to the maintaining of forests. In fact, some time ago he suggested the calling of a convention of representative men in the chief industries affected, including lumbermen, miners, pulp men, farmers, and the railway companies. The idea was to obtain a complete survey of the various forestry interests of the country. This convention was to have been held some time during the summer now passing, but owing to the prolonged session of Parliament and to other causes it was decided to hold it on January 10th, 11th and 12th next in Ottawa. We hope to be able to present shortly a programme of the proceedings, which are sure to be extremely interesting.

⁂

THE LUMBER TRADE.

Several minor advances have been made during the last month in the local prices for pine lumber, and the position is still very strong. This is due as much to the highly prosperous state of the country as it is to the heavy demand for wood materials for building and general purposes. The state of the trade in Quebec may be considered, generally speaking, as closely similar to that above-stated in Ontario.

In New Brunswick, according to the newspaper reports, the recent rains do not appear to have caused so much benefit in the way of bringing down the belated logs as was at first anticipated by lumbermen.

Canadian exports of timber to Great Britain during the month of August showed not much change compared with last year. The arrivals in Liverpool were 33,150 tons' register, as against 32,024 for the corresponding month last year. They met with a somewhat quiet market. Farnworth and Jardine, of Liverpool, in their last circular to hand, dated 1st inst., refer more particularly to Canadian woods as follows:—Of waney pine the import, with the exception of about 100 loads, went to Manchester direct, chiefly on contract. Stocks are ample, but there is little change in value to report. Square pine has not been imported; demand is limited, but stocks are light and prices steady. No arrivals of red pine have taken place, and the requirements are few. The import of oak logs consists of one small shipment of 3,000 cubic feet; there has been rather more enquiry, the stock is moderate, but values are unchanged. Elm has not been imported; values rule high, and stocks are fairly moderate. The arrivals of pine deals show an increase on the previous month, but less than corresponding period last season; the demand is inactive and the consumption only fair; stocks are increasing, but values are fairly steady. There is little enquiry for red pine deals.

New Brunswick and Nova Scotia Spruce and Pine Deals.—The arrivals to the Mersey during the past month have been 11,290 standards against 13,340 standards during the corresponding time last year. The deliveries have fully kept pace, and stocks, although still large, have been slightly reduced during the month. Values have slowly but steadily improved, and reports from the producing centres all indicate moderate shipments for the balance of the season. Pine deals are dull of sale. Birch logs have been imported moderately, stocks are light, and values are steady. Planks have arrived more freely, but have been in better request, and prices are firmer; stocks are fairly moderate.

British Columbian and Oregon Pine.—There have been no arrivals; the consumption has been fair, values are steady, but stocks are heavy.

⁂

THE NEW PROVINCE OF SASKATCHEWAN.

(By Our Special Correspondent.)

My previous letters were devoted to describing in a brief way some of the more salient features of the inauguration ceremonies in the new province of Alberta. I was not present at those at Regina in connection with the similar birth of Saskatchewan. But I reached there shortly afterwards and was in a position to gather first-hand the impressions made on eye-witnesses. The ceremony seems to have passed over with *éclat*. At Regina there was a flocking of the people from many miles around to show their interest and pride in the inauguration and its attendant meaning as to their own sudden though deserved accession of importance. And in many other parts of the new province there was the same feeling of local pride as in Alberta, causing the inhabitants to feel just a little sore that it was not *their* part to form the capital.

Regina is a rapidly growing city, with some good buildings, fine churches, and ample educational facilities. The pure water-supply is another feature on which Reginians are apt to dwell with pride. On all hands can be seen the signs of enlargement and improvement of the town. However, the chief part of this development, I believe, has been done during only the last two or three years. In fact, judging from what I heard and saw, I should say that the civic authorities of Regina have been, until lately at any rate, more on the look-out for big surpluses, at the expense of rapid development, than is usual in these far western towns and cities.

Even as it was, I note that the mayor, in an address to His Excellency the Governor General, dwelt rather lovingly on the fact that the city's surplus was much larger than is usually the case in cities of about the same size. There are many enterprising men in Regina, however, among merchants and others, and I think I could trace in some of them a desire to have less surplus but quicker growth in the essentials of an important city. Nevertheless, the evidences of satisfactory development, at any rate at the present time are unmistakable.

Here again, it is the surrounding country which is giving its irresistible fillip to the central city. Nowhere more than in the Canadian North-West is the fact more unassailable that the grand basis of prosperity is the land—the land and the crops grown on it. The mutual eating-up of other industries apart from that solid foundation of old Terra—the soil—is merely a question of time, even if they should gain so much of a start without it as a mere existence. Regina has the soil; it is surrounded with almost innumerable acres of some of the richest in the world. And thousands of these acres are even now being divested of millions of bushels of the wheat which spells prosperity. The result is not difficult to foresee. A country which can boast of individual farmers receiving six, eight, or nine thousand dollars for one crop of grain, as can be truthfully stated here, is a country whose central points are simply bound to "get on." *Vivat Regina.* F. P. W.

Regina, Saskatchewan, September 10th, 1905.

* * *

DISHONEST SMARTNESS.

Since the days of Benjamin Franklin, and possibly before, "the best on the outside" has been a time-mentioned, if not time-honored, phrase used with respect to the packing of fruit as well as some other kinds of merchandise. It was not honest, it was never popular, but it was common. A century has passed since Franklin's day, and we find human nature not different. People will still try to gammon other people by putting "the best on the outside." The action of Mr. J. W. Woods, of Toronto, in bringing fruit which was fraudulently packed to the attention of the Board of Trade this week, and through that body, we hope, to the proper authorities, for purposes of prosecution, is one to be commended by all who value the continuance of Canada's good name in trade matters. Mr. Woods, or members of his family, bought two baskets of apples at a Yonge Street store. On the outside these appeared to be fine, luscious apples of the Duchess variety, but underneath were shrivelled Greening windfalls. This sort of rascality is enough to incense any man with honest instincts. Mr. Woods says that while recently in England he came across several examples of the way in which the good reputation of Canada was being impaired by similar fraudulent devices. It is to be hoped that an example will be made under the Fruit Marks Act of the perpetrator of the above outrage.

* * *

A SATISFACTORY EXAMINATION.

The reputation in life assurance circles of the United States of Mr. J. V. Barry, commissioner of insurance for the state of Michigan, is that of a capable and honest business man with a clear mind. It should, therefore, be satisfactory to the friends and well-wishers of the Canada Life Assurance Company that after the full examination by his deputy and an examiner into the affairs of the company, which its president invited, the report of the Michigan Department is favorable in every respect.

Mr. Barry had instructed those whom he sent here to look into the Canada Life's affairs to be thorough and exhaustive in their investigation. We have read the report signed by Mr. Hadley, the deputy, and Mr. Rowland, the examiner. These men have no fault to find with the condition of the company's affairs, after looking over its books and assets for several weeks both at head office and in Winnipeg, and having independent valuations made of its office premises in the cities. But they compliment the company highly on its book-keeping and its business-like method of arrangement. They find its investments and loans regular, its policy reserves ample, and, a favorable point, "no agents' balances or advances to agents taken into account as an asset in any way, directly or indirectly, by the company."

Furthermore, and this is important at the moment, the report goes on to say: "The discussion at present prevailing in life insurance circles as to unprofitable or improper alliances of life insurance companies with other financial institutions, as well as your letter mentioned above, led your examiners to make a most careful scrutiny into the relations and business connections of the Canada Life with other financial corporations. As a result of this investigation it may be said with no hesitation that the Canada Life Assurance Company has no improper or unprofitable financial relations or alliances with any other institution, and all its affairs seem to be conducted on a purely business basis."

We have never doubted that the Canada Life was a sound and well-conducted company; but it must be agreeable to Canadians to find their largest life company, which does business over a large part of this continent, as well as in Great Britain, praised so highly by a respectable foreign authority.

* * *

BANKING AND FINANCIAL.

It is intended to hold the annual meeting of the American Bankers' Association in Washington, D.C., on Wednesday, Thursday, and Friday, October 11th, 12th, and 13th. This will be its thirty-first annual convention.

There is excuse for the alarm now being manifested in Great Britain over the rapid growth of municipal taxation, says the Montreal Gazette. "In London the man who pays $200 a year rent pays $120 in rates, or close upon three times as much as a Montrealer, who considers himself highly taxed, is asked to pay. The truth of the matter is that Montreal is one of the most lightly taxed of cities."

We have been told of a presentation made by citizens of Collingwood to Mr. Brydon, for sometime manager of the Canadaian Bank of Commerce at that place, on the occasion of his leaving. They presented to him a cabinet of silver and to Mrs. Brydon a collection of cut glass. The donors were generous in marking their appreciation of Mr. Brydon, for the testimonial was one of unusual beauty. That gentleman is now in charge of the Canadian Bank of Commerce branch, at the corner of Yonge and Bloor Streets in Toronto.

The volume of business, as indicated by the returns from the bank clearing houses, is keeping up well. The bank clearings as compiled by Bradstreet's for the week ending September 14, shows an increase at every one of eighteen clearing houses in the United States and Canada as compared with the corresponding week last year:—

New York	$1,600,452,663	Inc. 19.9
Chicago	201,658,300	Inc. 16.6
Boston	142,694,884	Inc. 22.4
Philadelphia	121,237,306	Inc. 7.6
St. Louis	54,371,341	Inc. 20.4
Pittsburg	46,667,333	Inc. 24.4
San Francisco	38,831,811	Inc. 29.7
Montreal	25,283,382	Inc. 22.8
Toronto	20,815,447	Inc. 27.9
Winnipeg	6,390,144	Inc. 34.8
Ottawa	2,533,849	Inc. 24.7
Halifax	1,953,152	Inc. 4.7
Vancouver, B.C.	1,905,376	Inc. 20,8
Quebec	1,665,830	Inc. 9.2
Hamilton	1,293,659	Inc. 12.7
St. John	1,114,202	Inc. 2.7
London, Ont.	913,019	Inc. 5.1
Victoria, B.C.	994,640	Inc. 36.9

Particulars are given in our St. John correspondence which explain the resignation by Mr. Stavert of the general managership of the Bank of New Brunswick.

The Merchants Bank of Canada has opened a branch at Georgetown, Ont. It is further to be noted that Wheatley in Essex County, is no longer a sub-agency to Leamington but is itself a branch.

A branch of the Sovereign Bank of Canada has been opened at 167 Church Street, Toronto, in the Labor Temple. Mr. A. W. Clark, for the past three years accountant at the main office, 28 King Street West, has been appointed its manager.

The shareholders of the defunct Bank of Yarmouth, who have been called upon for their double liability on October 9th, will attempt to recover from the directors, and a writ has been issued against Hon. John Lovitt, S. A. Crowell, Augustus Cann, J. B. Cann, and J. L. Lovitt.

The Hon. Mr. Matheson, Treasurer for the Province of Ontario, is leaving this week for London, where he hopes to arrange for a direct issue of $7,000,000 of Provincial bonds in connection with the Temiskaming and Northern Ontario Railway

The city of Vancouver is calling for tenders for half a million dollars' worth of 4 per cent. debentures, made up as follows:—$150,000, payable in forty years, in connection with street improvements, roads, and bridges; $25,000, payable in ten years, for re-surfacing improvements; $47,500 Fire By-law, bonds payable in forty years; $277,000, payable in terms varying from twenty to forty years, in connection with block-paving and cement walks. It may be stated that the total bonded debt of the city of Vancouver on December 31st last, amounted to $3,577,877, of which $1,200,000 was held in England.

It is time steps were taken to mark the general disapproval of the act passed last spring by the Quebec Legislature, imposing a tax on commercial travellers who enter the Province from foreign countries and from Provinces of Canada, for the purpose of selling goods there. Now it is learned that at the first meeting of the newly elected executive committee of the Montreal branch of the Canadian Manufacturers' Association this subject was discussed, and the committee placed itself on record as being strongly opposed to the tax, and the legislation committee will draw up a petition, to be submitted to all the members of the local branch for signature, setting forth the views of the members on the matter. When the signatures are obtained, a delegation will take it to the Provincial Treasurer, Mr. J. C. McCorkill, and urge its repeal.

The "Practical Treatise on Banking and Commerce," which is being written for the New York Bankers' Magazine by Mr. George Hague, has reached the stage of dealing with manufacturers. In the September issue, on page 357, is a reference which will interest many Torontonians. Says the writer: "Another factor in manufacturing success must finally be noticed. It is that a manufacturer should be about his works early in the morning. One of the most conspicuous instances of manufacturing success that Canada has known, in which, from small beginnings, an enormous and most profitable business had been built up, was characterized by this feature. One of the principals was always about the establishment as early as any of the workmen, going from floor to floor, from room to room, from department to department. Dusty and dirty he was as any workman in the building, before breakfast. But a few hours later the same man might be seen on 'change, in the bank parlor, or in his own office, guiding the finances of his large business, or attending to operations involving the welfare of men in all parts of the country." The reference is plainly to the late George Gooderham, whose habit of life it was for many years to rise at five in the morning and go through his mill and other extensive works before he broke his fast. After he had breakfasted he would go to town and presently appear at the bank, as described.

TRADE NOTES.

Large shipments of British Columbia canned salmon are being shipped by fast freight to the eastern and European markets, and it looks as though more will be disposed of in this way than ever before.

Up to the 14th inst., the deliveries of wheat to the Canadian Pacific Railway at Winnipeg were 1,346,000 bushels, while last year at the same date they only amounted to 56,000 bushels.

The Peterborough, Ont., Cereal Company are making rapid progress with the erection of their new elevator. The company will shortly, it is said, put up a special building for the manufacture of oatmeal and rolled oats.

A part of the cargo of boxed meats on the Allan liner "Victorian," consigned from Chicago to European houses, and valued at about $40,000, is to be sold by auction in Montreal. A large portion is said to be damaged, and will not be presented for sale.

The City woolen mills at Hespeler, Ont., have been sold by the Dominion Bank to Jonathan Ellis, of Port Dover, for $250,000, with the understanding, it is said, that in the event of an increase being made in the duty on woolens, the price shall be increased to $400,000.

The Colonial Weaving Company, Limited, held their annual meeting at Peterborough, Ont., on Monday of last week. The financial and other reports were unanimously adopted, and general satisfaction expressed with the prospects of the company. It manufactures chiefly silk and cotton woven labels, skirt bands, pull straps, top facings, hangers, etc.

The Government should certainly take swift action, if such be in any way possible, against the parties who swindle the Canadian or British public by putting in large lumps of sour curd in the middle of a cheese or by "facing" a lot of poor worthless apples with good ones. These methods are just the ones best adapted to ruin in quick time the fruit and dairy interests of the country. It behooves every consumer, therefore, who has the interests of Canada at heart to call the attention of the authorities to any similar case that may come under his notice.

FIRE INSURANCE.

A matter whose importance has been long recognized, but as to which concerted action still needs to be taken, is this: Public attention should be aroused to the confusion and loss which arise, when, in case of a conflagration, one town asks assistance from the fire-brigades of another town, only to find, when the visiting brigade arrives, that its couplings will not fit the hydrants, nor its hose couple up with that of the other town. At a meeting last week of the Civil Engineers' convention of the New England Water-Works Association, in New York, Mr. George A. Stacey, of Marlboro, Mass., moved the adoption of a uniform thread in hose and hydrant couplings, which the speaker said would enable any city to send its fire department to the aid of a sister city. His recommendation was put in the form of a committed report, and was adopted by the convention.

In addition to the carelessness shown by Canadians and Americans as to things which will cause fires, there is a grat deal of ignorance on the same subject. Some very common occurrences in this connection are described by the American publication called "Fire and Water." It thus explains how what are considered strange fires come about: "Dust is a wonderful producer of fires. There have been instances in postoffices where the dust of the mail-bags suspended in the rear of a close room exploded with terrific force. Dust explosions are of frequent occurrence in flour and drug mills. The origin of many fires in tailor shops may be traced to the so-called dry cleaning of clothes. A rag dipped in naphtha is often used in removing grease spots from garments. The rag soaked with inflammable fluid is thrown upon the floor. When the shop is closed up and the air is confined, the naphtha-soaked material will of itself generate fire. Bales of cotton placed in the hold of a ship are often the cause of disastrous fires. Frequently a spark from a cigar finds a resting place in a cotton bale, where it smolders for weeks. The dark hall in tenement houses is the indirect originator of fires. Greasy matting or small heaps of paper lie about. A match not extinguished, or a cigarette stub is thrown down and a blaze results."

* * *

VALUE OF FOREST PRODUCTS.

In view of the interest which attaches to forestry matters and to the convention which will meet next January at the call of Sir Wilfrid Laurier, as announced in another column, the following information concerning the annual value of the forest products of the United States will be in order. The report of the twelfth census, now issued, states that this value is nearly 575 million dollars annually. If to this were added the value of the firewood, farm material, and other forest products for which no returns are available, a very larger figure would be shown. Thus, as a direct source of wealth the forests of the country rank nearly with the mineral products as second to the farms. In addition to monetary value, the forests of the country have an immense, though not exactly calculable, value as a source of future supply and as a protective covering for watersheds.

Forests products are indispensable to mankind, and their steadily increasing price surely indicates that the demand is encroaching upon the supply. It is urgently important to the nation that the yearly consumption of forest products and the amount of available timber yet standing should be known.

—A report recently came from Vancouver to the effect that a quantity of the winter wheat grown in Southern Alberta, and in the Calgary district particularly, presumably about 1,000,000 bushels, was to be diverted westward to the coast on its way to market, in pursuance of the policy of the Canadian Pacific Railway Company to make Vancouver a great milling centre, giving them freight westward for their lumber cars, and at the same time relieve congestion on the Great Lakes route.

* * *

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ended with Thursday, September 21st, 1905, as compared with those of the previous week:

	Sept. 21.	Sept. 14.
Montreal	$27,471,155	$25,283,382
Toronto	19,852,405	20,815,447
Winnipeg	6,331,454	6,590,144
Halifax	1,771,317	1,953,152
Hamilton	1,722,451	1,293,659
St. John	1,044,530	1,114,202
Vancouver	2,084,005	1,995,876
Victoria	911,693	994,640
Quebec	1,544,492	1,665,830
Ottawa	3,066,259	2,533,849
London	1,019,833	913,019
Total	$66,919,594	$65,152,700

Vault doors in Bank of Montreal and Royal Trust Company, Montreal Three times larger and heavier than any other in Canada. Doors and Vestibules weigh **60 tons.** Total weight of lining and doors **260 tons.** Accepted to be the finest piece of vault work in construction and workmanship in the Dominion. — Built by the old established firm of

J. & J. TAYLOR, Toronto Safe Works, Toronto.

Established 1855.

—It is stated that the Grand Trunk main line will inaugurate its service through Brantford on the 30th inst., and efforts will be made to celebrate such an important event in the history of that enterprising city in a fitting way.

—The Western Fair at London, Ont., was a very successful function this year, the attendance having been at least 10,000 in excess of that of last year. The weather was ideal, with the exception of the closing evening, when there was a severe thunderstorm. The exhibits and the entries of stock were both well up to or above the average.

—According to the Iron Age, a characteristic buying rush seems to be on in pig-iron market. In Pittsburg the purchase for United States Steel of 10,000 bessemer pig has been followed by some big sales, aggregating 65,000 to 75,000 tons of bessemer and basic pig. Chicago reports big transactions in foundry iron, aggregating 25,000 tons. Cincinnati notes some round sales. In Buffalo one furnace interest placed 13,000 tons. Prices have stiffened in all directions as the result of this movement. It is understood United States Steel will need 40,000 tons of outside iron for October. As yet no purchases have been made. While the largest orders for rails which were in the market last week, including 160,000 tons for the New York Central, have not been placed yet, some goodly contracts have been booked. They total up over 100,000 tons. Railroad buying is greatly in evidence in bridge material. In the lighter lines satisfactory reports come from the wire trades.

TENDERS FOR DEBENTURES.

TENDERS, sealed and endorsed "Tenders for Debentures," will be received at the office of the undersigned, until Monday, the 18th day of September next, at 4 p. m., for the purchase, in whole or in part, of Debentures of the Corporation of the City of Victoria, as follows:

1. Debentures amounting to $100,000.00, issued under authority of the "Sewers Loan Guarantee By-law, 1905," numbered 456, dated the 1st August, 1905, and maturing 1st August, 1955.

2. Debentures amounting to $11,000.00, issued under authority of the "Electric Lighting Loan By-law, 1905," No. 457, dated the 1st August, 1905, and maturing 1st August, 1915.

Both sets of Debentures are secured upon the credit of the Municipality as a whole; their denominations are No. 1, $1,000.00 each: No. 2, $500.00 each, and they bear interest at 4 per cent, per annum, payable half yearly, the principal and interest being payable at the office of the Bank of British North America, either in Victoria B. C., Montreal, London, England or New York, U. S. A.

The tenderer must state the price net at Victoria which he will pay. In addition to the net price, the purchaser will have to pay to the Corporation the interest on the said Debentures for the period between the 1st of August, 1905, and the date of the receipt of the purchase money by the City Treasurer.

The Corporation does not bind itself to accept any tender.

OVER-MANY LAWS.

A Crying Curse of the Degenerate Legislatures.

Henry St. George Tucker, of Virginia, is the latest public speaker to call attention to the evils inflicted on the public by the excessive over-production of laws and statutes. In his address to the members of the American Bar Association, of which he holds the presidency, Mr. Tucker, among other excellent things, said:—

"What impresses one most deeply in an examination of the legislation of the States is the number and variety of subjects of legislation and the assumption (I will not say always improperly) by the state of functions which in our earlier history were unclaimed by it. We are a much-governed people, and there is nothing which affects the American citizen, from infancy to the grave, awake or asleep, in motion or at rest, at home or abroad, in his personal, social, political or property rights, which is not the subject of regulation by the state. Indeed, whether we eat or drink, or whatsoever we do, we do it all in subordination to the law of the state. The Government, as trustee for society, controls our rights, our wants, our necessities, and our individual action in their relation to society. The pangs of hunger and thirst, the uses of property and the freedom of individual action are all regulated by their effect upon others, and we realize at last in its fullness of meaning the truth that 'no man liveth unto himself.' The home is no longer a man's castle, but it may be a prison house with the family as the inmates and the board of health as jailer."

Upon these remarks the Albany Argus comments as under.—

"The same thing has been said before, but it cannot be said too often, or too emphatically; too many be-it-enacteds are the growing curse of our time. The people are in part to blame for the abuses and excesses of legislation, for a delusive notion has grown up that every evil or misfortune can be cured by a statute decreeing that it shall no longer exist; but thousands of laws are on the books at which lawyers, even, are surprised when their attention is called to them—they never dream of their existence.

"More than 700 new laws were added to New York State's total by each of the last two Legislatures. Think of such a total, in an old state, where all ordinary and natural subjects of legislation were covered, years ago. In great part, these new laws are tinkerings and fixings-over of old statutes, to gratify a legislator's whim that he can do it better; but ignorance of the law excuses nobody, and the impossibility of keeping track with them all, and understanding the changes in old laws with which one may chance to have been familiar, is no defence."

But for the fact that a large percentage of the inquisitorial paternalistic legislation of the States is dead letter from the start, the patience of a much-legislated people might give way, or force the election of Legislatures pledged not to legislate.

⁂

ANSWERS TO ENQUIRERS.

Land Owner, Kingston.—(1) The paper is too technical, and not of sufficient immediate interest. Send it to a chemical journal. (2) The general view of mining men seems to be opposed to royalties on minerals. The business of mining or prospecting for mines is laborious enough, and, indeed, it is also risky enough, and expensive enough, without loading it with a tax of the kind. Here's an extract from a recent letter to the Canadian Mining Review on the subject, signed by A. McCharles and J. E. Hammond, of Sudbury: "The mere suggestion of a royalty makes the soul of a Sudbury mine-owner or prospector sick—and no wonder. For the royalty that was put on the nickel mines in 1891 only produced instead of revenue two bad results, and had to be abolished in the end. It destroyed the selling value of all the nickel properties it applied to for seven long waiting years, and, worse still, it enabled one company to get a practical monopoly of our nickel mines. Those who are engaged in the mining industry are quite willing to pay their fair share of the burdens of the community in the way of taxes, but they are not willing to be singled out for a special tax from which all other industries are free. The ordinary risks of mining are enough to take. Besides, in Ontario, except a few little broken stringers of silver-cobalt ore in a very circumscribed area in the Temiscaming district, nearly all the economic minerals so far discovered, such as nickel, iron and copper, are low grade ores and expensive to treat, notwithstanding all the windy yarns published in the daily press.

F. M., Boston.—The name of the Superintendent of Mines for Canada is Eugene Haanel, Ph. D., whose address is care Department of Interior, Ottawa. The Ontario Bureau of Mines is not a Dominion affair, but belongs to the Province of Ontario. Its director is Mr. T. W. Gibson; its secretary and inspector is W. E. H. Carter, B. A. Sc.

Bank Clerk, Chatham.—France has been a republic for a quarter century or more. Her population is nearly 39,000,000.

⁂

OUR HALIFAX LETTER.

The attention of business people and others here during the past two weeks has been taken up principally with the annual exhibition, and a large number of visitors from all over the Province, have been in the city. The attendance, however, has not been so satisfactory as could be wished for, and the Provincial Government will undoubtedly be called upon to face a pretty heavy deficit this year. Sentiment in favor of holding the fair every two years instead of yearly is gaining ground, and it is not improbable that after 1906, when the Dominion Fair is to be held, the two year rule will be the one adopted. Another drawback is that holding the exhibition so early in the year does not permit of an adequate display of fruits and vegetables. About the poorest display made this year was in the fisheries section, which is somewhat surprising, considering that fishing is by far the largest resource of the Province. Next year a new and properly adapted building will be prepared to house the fishery exhibit, and it is hoped that it will be up to the expectations which visitors from other provinces will undoubtedly entertain regarding it.

Black Brothers & Company, Ltd., fish dealers, has passed into the hands of a receiver. The Blacks' hardware business was started in Halifax in 1816, and has recently been carried on by Messrs. Troop. After the fire on Water Street last year, in which the hardware premises of the firm were destroyed, they retired from the hardware business and devoted themselves entirely to the manufacture of prepared codfish. They were indebted in a large amount to the People's Bank, of which the head of the firm was a director, and theirs was one of the accounts which made it necessary for the People's Bank to be merged in a stronger institution. The court has appointed William Duff, of Lunenburg, as receiver, and he is now advertising for a million pounds of green fish with which to carry on operations. The failure of the firm has been expected for some time. Another fish firm, also heavily indebted to the People's Bank, that of L. Anderson, Lunenburg, has also assigned; and it is thought that there will be a merger of Black's, Anderson's, and some other concerns in the same line.

J. C. McIntosh & Co., Halifax, have been awarded the city loan of $207,000, at four per cent., thirty-five years; floated for sewerage construction. Their tender was $207,274.27. There were seven other tenders at or below par.

The City Engineer's annual report shows that the cost of maintenance of the waterworks last year was $83,511.77, an unusual quantity of new work having been performed in the renewal of old mains. The engineer used the waterworks as a moral to point some remarks he made on the subject of municipal ownership, the system having earned each year the entire cost of maintenance, renewals and repairs, and left a margin of profit. The rates are low as compared with other cities of about similar size.

Judge Longley has been re-appointed president of the Exhibition Commission.

The fishermen and the miners have both been assembled here this week. It was the first annual meeting of the Fishermen's Union, and the Provincial Workmen's Association was also in session. Among the subjects discussed by the fishermen were: "The Duty on Manila Cordage;" "Shipping Live Lobsters;" "The Cannery License Law," and "The Use of Purse Seines by Canadians in their own Waters."

Fire in the store of the J. A. McDonald Piano and Music Company this week caused a damage of about $6,000, covered by insurance.

The directors of the Nova Scotia Telephone Company have allotted to shareholders $125,000 of new stock at 115 per cent. of par, or $11.50 per share. The holder of four old shares of record, September 1st, is entitled to subscribe to one new share, and the stock allotment being large, it is expected that the rights will be easy to obtain.

Halifax is about to purchase a new fire engine, and the Canadian Manufacturers' Association requested the Board of Fire Wards that, in considering the tenders, all things being equal, they should give the preference to a Canadian-built engine.

Halifax, 18th September.

⁂

DEATH ROLL OF A WEEK.

One of Toronto's citizens who has had a long and honorable career in her midst passed away on Monday last in the person of Larratt W. Smith, K.C., M.A., D.C.L. He came to this country in 1833, from near Plymouth, Eng., with his parents, his father being a British army officer, and was educated at Upper Canada College and King's College. Having practiced as a solicitor for over fifty years, being head of the firm, Smith, Rae & Greer, he gave up practice in 1896, and presently became actively connected with a number of financial concerns. He had long been prominent in the social life of the community. Dr. Smith was elected a senator of Toronto University, and was twice its vice-chancellor. He was a trustee of Upper Canada College, a director of the North American Life Insurance Co., and of the London and Canada Loan and Agency Co., president of the Hand-in-Hand Fire Insurance Company, president of the Ontario Accident Insurance Co., and president of the Consumers' Gas Co., while his connections with other societies, such as musical, astronomical, literary, and his connection with the volunteer as well as the regular militia, marked the range of his tastes and sympathies. His was a long, active, and useful life. He had passed the age of 84 years.

Not a few in this city and elsewhere have heard with real sorrow of the death in London, England, last week, of Mr. Thomas P. Coffee, managing director of the Trusts & Guarantee Company. Mr. Coffee had gone to Britain on business, and was attacked with typhoid fever. An operation failed to give relief, and he died on Friday. Having previously practised as a barrister in Guelph, Mr. Coffee removed to Toronto some seven years ago to take the management of the company on whose business he had gone to London last June.

A startlingly sudden death was that of Mr. Thomas R. Wood, well known in fire insurance and other financial circles of Toronto. He had returned to his dwelling on Bloor Street on Friday afternoon last, and going upstairs carried a glass of water with him to his chamber. It is supposed that in drinking this water hastily, or in taking medicine, some drops got into his wind-pipe and brought on a fit of coughing—for his throat had been troubling him for some time. So violent was this coughing that he burst a blood-vessel, and when some member of his household, alarmed by the unusual sounds, rushed to his assistance, she found him almost lifeless. He had bled to death, practically alone. Mr. Wood had lived in Toronto for some thirty years, coming here from Montreal. He represented the Aetna Fire Insurance Company of Hartford for that long period, and was recognized as a shrewd underwriter. Devoted to business and successful in money-making he took but little share in municipal or social life. Some associations of a recreative kind might have relieved the monotony of his too sedentary existence and tended to prolong his life. His business ability as well as his blunt honesty was recognized, and he was sought for on financial boards. At his death he was a director of the Standard Bank of Canada and the Consumers' Gas Company, and the London and Canadian Loan Co.; and vice-president of the Toronto Mortgage Company, and the Dominion Telegraph Co., as well as being one of the board of the Home Bank of Canada.

Another man who has been familiarly known in Toronto insurance circles for a quarter of a century at least was Mr. Joseph B. Reed, who died on the 19th inst., after an illness of considerable duration. He was local manager of the London & Liverpool & Globe Insurance Company, and his firm, Joseph B. Reed & Sons, conducted a general insurance agency, which we assume will continue to be conducted by his sons, Messrs. Carl Reed and Legrand Reed.

⁂

AN EXPLANATION ASKED.

Bay Street, Toronto, September 19th, 1905.

Editor Monetary Times:—

Sir,—I have read with a great deal of interest your articles of 1st and 8th instant, on Assessment Insurance, but it seems to me they lack that directness which they would have if you had stated explicitly what you meant by "Assessment" organizations: Do you call all fraternal organizations insuring their members assessment societies? If not, how is one to distinguish? for I am informed most of them have a *fixed* rate; some claim not to be assessment societies in reailty; some claim that their rates are based on the experience of line companies, minus large expenses, etc., etc., etc. Another point: Have *all* fraternal organizations the power to increase their rates as they wish? Are there *no* fraternal organizations in which one could safely insure? I am no friend of fraternal societies, have no membership in any of them at present, and all my insurance is in line companies, but I would, and I believe many of your readers would like, to hear from you in further articles clearing up the points raised above.

Yours truly,
QUERY.

To answer our correspondent's questions in their order, 1st:—It does not matter what we call them or what they call themselves, if they agree to give each member at death a stated sum such sum to be collected by assessing surviving

members they are properly called assessment societies. There is a saving clause or by-law in their certificates which gives the association power to assess members to meet death claims and their by-laws are always made part of the contract. This makes them all assessment societies, although they may be fraternal in the distribution of their benefits. It is to be remembered that not all fraternal societies which profess to give benefits to families of members give death benefits; some of them give only sick benefits—and very often most wisely.

2nd:—As to this question, of their having power to increase rates. Apparently the power does not always reside in the managers of such societies, for we often of late see conventions of all members of some society called to decide upon and authorize an increase of assessment where it is found to be needed.

3rd:—There are societies whose certificates a person would be safe in taking if he is looking for temporary insurance. One such that comes to mind is the Ancient Order of Foresters, W. Williams, secretary, office in Methodist Book Room building. This concern is trying to afford to its mmbers insurance at a low rate and on a safe basis. All such societies must, however, recognize two things. Firstly, that an adequate rate of assessment must be secured—not necessarily the old line companies' rates; and secondly; they need to have a yearly valuation of their obligations and their assets, that is to say, they must take stock.

* * *

CANADIAN MANUFACTURERS' ASSOCIATION.

Canadians of all classes have become accustomed to looking with lively interest to the annual deliberations of that important section of producers, the Canadian manufacturers. This week, with their convention held at Quebec, it has been no exception to the rule. The Ancient Capital threw itself into the welcome to its visitors, as it knows so well how to do, with the result that not only was there accomplished with satisfaction a large amount of important business, some of it of considerable interest to the public, but the delegates were able to enjoy a very pleasurable outing. The speech of welcome by M. Parent, the Mayor of Quebec, was followed by Mr. W. K. George's able presidential address, to which we refer in another place.

The report of the treasurer of the Association showed that the membership had increased during the year by 328. Reference was made in it also to the success of the transportation and insurance departments. A strong feeling was expressed against the taxes imposed by certain Provincial Governments on commercial travellers on the ground that no part of a province's revenue should be obtained at the expense of the energy and enterprise of a neighbor. The committee also commented drastically on the license fee charged by some provinces on companies holding charters from the Dominion or other Provincial Governments. Finally, a recommendation was made to draft resolutions to be submitted to the Provincial Premier's Conference in order that the heads of the various provinces should be in a position to realize the opposition existing among the manufacturers towards these taxes.

Another committee's report stated that difficulties between employers and employees had not been so numerous or so serious during the last year as for some time previously. The rank and file of Canadian work people had been convinced that ill-advised strikes were neither profitable nor popular. The employers generally had realized that they must control their own enterprises, and many shops that were formerly union shops had been declared open. Were it not for the too frequent appearance of the United States business agent or agitator, the belief was expressed that conditions in Canada between the workmen and employers would be generally satisfactory.

An interesting discussion took place on the insurance question; while it was emphatically the opinion of the assembled manufacturers that a reduction in insurance rates on the part of Canadian companies is badly needed, it was pointed out that the former would always prefer, if possible, Canadian concerns with whom to do business rather than American. Often, however, it was alleged, the high rates charged compel customers to go outside the Dominion. It is stated that the saving in first year's insurance premiums on forty-eight manufacturing concerns, effected since Mr. Heaton's committee took hold of the matter, was no less than $7,724. Adjustment in losses aggregating $43,322 has been undertaken.

It is proposed to make the insurance department a statistical office, keeping a record of premiums and losses. Attention is recommended to the adoption of a uniform stationing policy for Canada, uniform building laws, and the appointment of fire marshals to investigate the origin of fires. Where public franchises entail increased insurance the additional rates, the committee think, should be borne by the franchise-holders, instead of the assured. However, the somewhat antagonistic views expressed towards the underwriters were not shared by all the delegates by any means, and several advised moderate counsels.

A sensible suggestion was made by Mr. Hugh Blain, of Toronto, who considered the best thing the Canadian Manufacturers' Association could do would be to try and join in with insurance people in mapping out something which would be helpful to all.

The committee appointed by the Executive Council to investigate the subject of technical education, with a view to recommending early action on the part of the Dominion Government in inaugurating a national movement for a standard system of technical education in Canada, reported that technical education as applied to the manufacturing industries properly comes under the supervision of the Department of Trade and Commerce of the Dominion Government. The committee had made careful inquiries regarding the importance of technical education in the three countries in which it had reached its highest development—Germany, England, and the United States. In each of these it was recognized as a prime necessity, and it was generally admitted that the development of manufacturing was becoming each year more dependent on the trained and expert help that is educated in the different technical colleges. It is not an encouraging statement to make, but it appears to be true that there is not as yet a single school in Canada that approaches the standards set in these countries.

The committee appointed to investigate the tariff has come to the opinion that the anti-dumping regulations had undoubtedly proved a factor in restraining foreigners from dumping their goods on the Canadian market. It reaffirmed the resolution on the tariff passed at the Association's annual meeting in Halifax in 1902. It also re-affirmed its opposition to any arrangement for reciprocal trade with the United States, whereby the manufacturing industries of Canada might be affected.

The proceedings terminated on Wednesday evening with a highly successful and enjoyable banquet at the Chateau Frontenac. The chief speaker was Sir Wilfrid Laurier who, speaking of the West and of the tariff requirements best adapted to its growth, said:—"They will require clothes, they will require furniture, they will require implements, shoes, and everything that man has to be supplied with. It is your mission, it is my mission also, that this scientific tariff of ours shall make it possible that every shoe worn in these Provinces shall be a Canadian shoe; that every yard of cloth shall be made in Canada, and so on." Sir Wilfrid, however, showed no such narrowness as to say that Canadians, therefore, should not trade with other nations. "I want to trade with other nations," he said, "and I hope the scientific tariff will not prevent it. I want to trade with Great Britain, and I have no hard feelings against the Americans."

Sir Wilfrid considered, however, that if Canadian manufacturers are to supply the growing West, it is not so much a question of tariff as of freight rates and transportation facilities.

OUR ST. JOHN LETTER.

The mystery that for a time surrounded the announcement that Mr. W. E. Stavert, manager of the Bank of New Brunswick, had tendered his resignation, has at last been cleared up. The first reports said Mr. Stavert was to succeed Mr. McNider as inspector for the Bank of Montreal. Now it is admitted that he is to be manager of the agencies in the Maritime Provinces at Newfoundland. He will have some thirty branches under his personal control and it is believed will continue to reside in St. John. Under Mr. Stavert's management the Bank of New Brunswick began a policy of expansion, and in the few years that he has had control has established several branches, and it bought up the Bank of Summerside. Now that a successor has to be chosen there is much speculation as to what the future policy will be. The bank is in an excellent position and pays a dividend of 12 per cent. It is believed that Mr. Stavert had it in mind, had he continued to manage it, to increase the capital and greatly extend the business of the bank, with the idea of making it one of the big financial institutions of the country.

There are signs of considerable industrial development in St. John. The James Pender Company, a concern manufacturing horse and wire nails, has just about completed a large addition to its plant that will at least double the output. The Welcome Soap Company has begun the erection of a big addition to its plant, and besides increasing its output will go into the manufacture of glycerine from spent lyes. Messrs. E. Riley & Company, whose corn meal mill was destroyed by fire a year or more ago, have arranged to rebuild, and will begin work at once. In addition to these Messrs. McLean, Holt & Company, a local foundry concern, are to put up buildings in which to begin the manufacture of stoves, and the St. John Foundry Company will increase its plant, and also make stoves. These are industrial enterprises already under way, or about which there is not the least doubt. There are reports of other new enterprises to be established in the near future. All mean growth and development.

The Provincial Government at its last session passed an act calling for the appointment of an inspector of factories. They have now appointed Captain John McMulkin, a retired steamboat man to the office. The labor organizations are not altogether satisfied with the Government's choice and profess to think that the Captain, who is a very worthy man and former Alderman of St. John, will be too friendly to the capitalist class.

The lumber outlook has not improved. There have been some heavy rains, but not sufficient to cause any appreciable rise in the water of the river. Large crews of men are being sent out and considerable money will be expended in an effort to get to the booms all the logs that are thought to be within reach of water sufficient to float them. Several mills are shut down and it is expected others must stop sawing soon. One result of the conditions prevailing is the failure to-day of Messrs. D. D. Glasier & Sons, a firm who do towing on the river. This firm, one of the oldest and most reliable in the city, have a large fleet of tugs. Two years ago they towed to St. John from various river points more than 100,000,000 feet of logs. Last year quite a number of logs were hung up and their tow fell to about 66,000,000 feet. This year it is less than 30,000,000. In two years they have done less than in the year previous and thus are cramped for money to meet their obligations. It is believed the lumbermen will make provision to carry them along until such times as business improves.

The affairs of the Cushing Pulp Company, which have been before the courts for some months, have reached an acute stage. The mill was to be sold at the instance of the Eastern Trust Company, representing the bondholders, when Judge McLeod, at the instance of George S. Cushing, one of the chief local shareholders, made an order for the appointment of a liquidation. This was appealed from and the Supreme Court stood three to three, so the order held. W. E. Veroom was appointed liquidator on Saturday and expected to take charge on Monday, but Judge Landry issued an order calling on him to show cause why he should not be restrained. That is to be fought out on Wednesday. Captain Partington, of England, who is the chief stockholder and bondholder, is the moving spirit for the sale of the mill under the mortage, and it is claimed that the proceedings he is taking will wipe out all the local shareholders, while the liquidation proceedings will, it is claimed, better protect the interests of all parties. The mill itself is now surrounded by guards to keep out the liquidator, and there is likely to be a lengthy legal squabble over the property. The provoking feature about all the proceedings is that the mill is now getting along splendidly, showing a profit of about $5,000 per month, which would soon wipe out all its indebtedness and put it on a dividend paying basis.

The hunting season opened on Friday last, and the province is now almost filled with American sportsmen, who are willing to pay heavily for chance to shoot moose and cariboo. The province expects to realize about $16,000 in fees from these sportsmen, and it is figured that in other ways they will spend two or three hundred thousand dollars.

Saint John, N.B., 19th September.

* * *

—It has been announced by the president of the Council of the British Columbia Government, Mr. F. Carter Cotton, that an arrangement has been reached with the Grand Trunk Pacific for the establishment of the terminus of the G.T.R. at Kaien Island. The Government has sold to the company 10,000 acres of land in the vicinity of Tuck's Inlet, for one dollar an acre. The terminals of the railway will be constructed on this land. Subject to the approval of the Governor-General-in-Council, the company on August 3rd, 1905, agreed to establish its terminus on the said lands and "thereon construct of a substantial and permanent character the wharves, docks, stations, yards, roundhouses and other facilities proper and suitable for such terminus." The company has also agreed that "some substantial work will be begun upon the construction of the said wharves, docks, stations, yards, roundhouses and other facilities on or before the thirtieth day of June, A.D. 1906, and thereafter actively prosecuted to completion." Should the company fail to carry out the provisions of the agreement, the Government has the right to cancel it and to resume possession of the land. The Vancouver News-Advertiser is persuaded that the course followed by the Provincial Government in dealing with this important matter "will receive the approval of the people of British Columbia. The situation was not without difficulty. The Dominion Government had deliberately refused to protect the legitimate interests of British Columbia," and so the Provincial Government took a course which resulted as above stated.

STATEMENT OF BANKS acting under Dominion Gov't charter, for the month ending 31st August, 1905.

London Office—37 Nicholas Lane, Lombard Street, E.C.

J. S. COCKBURN, Manager. | J. FERGUSON, Assistant Manager

The Agency of Colonial and Foreign Banks is undertaken and the Acceptances of Customers residing in the Colonies, domiciled in London, retired on terms which will be furnished on application.

OUR BONDS are a legal investment for Trust Funds. If you send us your address we shall be pleased to send you a copy of the Order-in-Council under which Trustees are authorized to invest Trust Moneys therein. They are also accepted by the Government as the deposits of Insurance Companies, Banks, etc.

THEY are secured by more than Twenty-four Million Dollars of Assets. . . They bear interest at FOUR PER CENT., payable semi-annually. We issue them in sums of One Hundred Dollars and upwards. A specimen will be sent you on application; also a copy of our last Annual Report.

Write for them.

CANADA PERMANENT MORTGAGE CORPORATION,

Toronto St. TORONTO

We Do Not Ask

you to buy our 5% Debentures because we believe they are a good investment, but we would suggest that you make an investigation, as a knowledge of the facts will convince you of the superiority and safety of this investment. . . .

We have just published the details of this proposition, in a handsome booklet entitled "An Investment of Safety and Profit," which we will be glad to send you on the receipt of a post card from you.

Mercantile Summary

The total building permits issued in Winnipeg for the year to date amount to $9,405,200.——The Canada Malting Co., of Toronto, has taken out a permit for an $85,000 brewery on Lincoln Street.

A Government cable is being laid by the United States from Charlevoix, Michigan, to Beaver Island in the middle of Lake Michigan. Congress appropriated $35,000 during last winter for this telephone cable line, in order that connection might be had with Beaver Island, where the Weather Bureau proposes to establish a storm warning station.

At Oyster Bay, on Saturday last, the President of the United States made some changes in the diplomatic and consular service. Among them were: Howard D. Van Sant, of New Jersey, United States consul at Guelph, Ont., has been promoted to be consul at Kingston, Ont., and Alexander Neingartner, of Ohio, until recently consul at Trieste, Austria, has been appointed to be consul at Guelph.

After eleven days aground in the St. Lawrence fifty miles above Quebec, the turbine steamer "Victorian," of the Allan Line, which went ashore in a fog, was pulled off on Tuesday last and went to Quebec the same day under her own steam. Some 1,600 tons of merchandise had been lightered from her. Because of her great size she cannot be docked at Quebec, but will proceed to Belfast after temporary repairs here. Her No. 2 hold it appears is pretty badly damaged.

On Saturday last, two permits for buildings to be erected in up town Montreal and representing an outlay of $261,000, were issued by the building inspector. One is the new Nurses' Home for the Royal Victoria Hospital, the estimated cost being $161,000. It will be fire-proof. The other permit was for the Lindsay Building, on St. Catherine Street, to cost $100,000. It will be seven storeys in height, built of sand-stone, and used for offices.

George H. Robinson, managing director of the Britannia Copper Syndicate and owner of the Crofton Smelter, has, we hear, entered into a contract with the O'Mar Milling Company, who own large claims on Prince of Wales Island, B.C., for the transportation of the ore from the mines to the smelter. The contract is important because of its size, the Northern properties alone, in the neighborhood of Ketchikan, being likely to ship between 60,000 and 100,000 tons of ore within the next twelve months. Mr. Robinson, it is said, also contemplates taking up an option which he holds on the Mount Andrew's mine on the Island and proceeding with their development, shipping the ore to Crofton for use as a flux. The latter is red hematite of iron.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST EAST TORONTO.

Mercantile Summary.

The Dominion Government have have awarded the contract for dredging in the harbor of St. John, N.B., to G. S. Mayes of that city, the price being in the neighborhood of $100,000.

Word comes from Meaford that recount of votes on the by-law recently submitted to the electors, buying the electric light plant of Moore & Sons, was held by Judge Hatton last week, who declared the by-law defeated by a majority of two votes. The by-law provides for an expenditure of $12,000 by the town.

We learn from Montreal that Mr. J. W. Morton, of South Norwood, who is champion sprinter of the world, and Mr. G. A. Parker, of "The Outlook," London, England, were introduced at the Montreal Board of Trade by E. F. Craig, chief grain inspector. Both these gentlemen, we understand, intend paying a visit to the West.

Joseph Gagnon, formerly clerking in the United States, and who began storekeeping in a small way at St. Flavien, Que., three or four years ago, has put his affairs in the hands of Lefaivre & Taschereau, assignees, Quebec.——Capelowitz, Bines & Co., in a small way of trade at Chicoutimi, have assigned, and the estate is being closed out by Wilks & Michaud, accountants, Montreal.

The actual taking over of the Canada Atlantic road by the Grand Trunk Railway will be accomplished, it is said, on the 5th prox. The latter company contemplates building a new depot in Ottawa, as also a large hotel. It will shortly begin the work of strengthening the bridges over their whole system between Parry Sound and Swanton.

A New York paper declares that few of the funny men on the American stage expected to be comedians when they began their careers. De Wolf Hopper studied law before going into theatricals. Peter Dailey was a jumper in Whitney's Circus. Digby Bell was a purser for the White Star Steamship Company. Richard Carle was engaged in Lyceum work. Henry Clay Barnabee was a cash boy, and Thomas Q. Seabrooke was a bank teller. James T. Powers was a Western Union messenger boy. Frank Daniels was a woodcarver, and Harry Connor was a plumber.

We note several minor failures in Nova Scotia, as follows: McDonald & McLeod, engaged in a store business on a limited scale at Inverness, are making an offer of 40 cents on the dollar. Their liabilities amount to about $1,600.——An extension arrangement is sought by C. B. Blakie, dealing in men's furnishings at Sydney. He was formerly clerking in this line in Halifax, and began as a retailer here in 1900. He owes $4,200, and claims a nominal surplus of $2,300.——As the result of several suits and judgments in favor of Montreal suppliers, F. J. Farlinger, tailor at Sydney, C.B., has assigned to Isaac Greenwell.

A Change in the Trusteeship.

Whether of a Will, Marriage Settlement or Bond Issue, is a troublesome and expensive matter.

Where private trustees are appointed such changes are inevitable.

The Trusts Company alone enjoys continuity of tenure, fixity of residence and permanent records.

Mercantile Summary.

South Vancouver, B.C., ratepayers have voted in favor of borrowing $50,000 for road improvements.

The Dominion Government has authorized the expenditure of a considerable sum for the repair and proper protection of the shore of Centre Island, Toronto.

Rapid progress is being made in building operations in Montreal. Last year the total number of permits issued was 1,335, while this year the number issued already amounts to 1,330.

Another fire took place in a Quebec town on September 18th, when three buildings, with their contents, were completely destroyed in Canton Labadie, and several others injured. They were mostly residences. The total loss is put down at about $7,000, partially insured.

A telephone line is being constructed between Nicola and Penticton, B.C. An interesting feature of the line is that the lake will be spanned with a cable from Kelowna to the west side. This will require about three miles of cable. Part of an old Atlantic cable is to be used.

The Victorian (Australia) Chamber of Manufactures has, it is announced in a Canadian Associated Press despatch, passed a resolution in favor of a customs tariff giving a preferenec up to twenty-five per cent. to Great Britain, subject to the conditions of her giving adequate protection to Australian industries.

It is announced that the Portland and Seattle Railway Company, which is controlled jointly by the Great Northern and Northern Pacific Companies, will shortly begin the construction of a line from Kennewick, Wash., along the north bank of the Columbia river to Vancouver. This will give to the Great Northern and Northern Pacific first-class entrance to Portland and a direct line to and from the east.

The manner in which the bounty on lead is contributing to the progress of the mining of that metal is illustrated in the returns of the smelters at Trial and Nelson. The August output at Trail was 1,076 tons, at Nelson it was 996, while at Marysville the smelter is hardly yet in full working order. If the present rate is kept up throughout the year the production will be over 30,000 tons, an increase over last year of 60 per cent. The principal contributors to the smelters are the "Eugene" and the "Slocan Star."

The Copper Cliff Courier devotes a column to describing the new King Edward Hotel in Sudbury, on which structure its proprietor, Mr. Harry Johns, is declared to have spent $100,000. Hardwood polished floors, oak-panelled halls, mahogany dining room, are features; so are stained glass windows and electric lights. The dining room can seat 250 people. Part of the furniture is supplied by the Canada Furniture Co., part by a Chesley firm. The appointments are all good, some of them rich.

PORT ARTHUR & FORT WILLIAM.

Post Office ddress. — — Port Arthur, Ont.

Mercantile Summary.

The Great Northern Railway is making a cut on lumber and shingles into points in the Canadian North-West. The new rates will be forty and fifty cents per hundred pounds on lumber and shingles respectively, and the result will be that a market in the territory affected will be afforded to mills on Puget Sound. The district affected by the new rates will be Brandon, Portage la Prairie, Hartney, Headingly, Carman, and intermediate points. The old rate from Seattle to Portage la Prairie on fir lumber was fifty-six cents, and on cedar shingles fifty-seven and a half cents.

The Canada Steamship Company proposes to run a direct steamer service between Halifax and Glace Bay. It will probably be carried on by the "Canada," which would run between Halifax, Gabarus, Louisburg, Sydney, Port Morien, and Glace Bay. That vessel is of about 700 tons gross, with a capacity of about 600 tons of freight and excellent passenger accommodation. From Halifax her cargoes would, no doubt, be mixed, while on return trips she would carry coal. Such a service would appear to be badly needed by Cape Breton merchants.

The Dominion Government passed an order in Council abolishing under certain conditions the royalty of 2½ per cent. on gold produced from quartz, also the royalty on the gross output of copper-mining locations in the Yukon. In the case of gold the exemption applies where not less than $25,000 has been expended within five years after the date of the order-in-council. A plant with a minimum capacity of five tons per day must be installed for milling or otherwise treating ore, the value of which is to be included in the estimate of outlay. Where claims are copper an expenditure of $50,000 within ten years is required, and the erection of a smelter of not less than ten tons capacity per day for the claim.

The assignment is announced of Allen Fox & Co., general merchants and sawmill owners, of Canterbury Station and Hawkshaw, N.B. Their Hawkshaw branch was burned several weeks ago, and they claim a loss of $9,000, but they are apparently having some difficulty in getting the loss adjusted.——W. C. Cummings who keeps a general store at Doaktown, N.B., offers his creditors 25 cents cash, or 40 cents spread over twelve months. He owes about $9,000, and shows assets consisting of stock $2,700, and book debts of $7,218, of which about one-third are figured as good, and this tells the tale.

A report from Ashcroft, B.C., says that a transaction which will do much to bring that place and the rich mineral district adjacent to it before the eyes of investors, was closed a few days ago, when Mr. Smith Curtis of Rossland took up the option he held on the Transvaal group of copper claims in Highland Valley, twenty miles from Ashcroft. The terms of the working bond are understood to be that Mr. Smith Curtis is to expend the sum of $8,000 in six months, and if then satisfied with the property is to pay the owners $75,000. Mr. Curtis in turn has transferred his bond to Mr. John Turnbull of the Trail smelter, a representative of the C. P. R. The price paid by Mr. Turnbull is said to be $100,000. The development of this claim is expected to mean much for this locality.

Late failures in the city of Montreal are chronicled as follows: R. & A. Masse, two young single men, who started in the hat and fur line only eighteen months ago, have made short running of it, having assigned on demand, owing $4,396. The estate will be wound up.——J. N. Archambault, a grocer in the western suburbs, is insolvent, with liabilities estimated at about $4,000.——A Montpetit, also a grocer, in Maisonneuve suburb, has failed with small obligations.——A third failure in the same line is that of J. L. Olivier, formerly a clerk in Sherbrooke, Que., who began business last spring, under what was considered fairly favorable auspices, but whose affairs are already in the hands of the assignee.——Albert Lefebvre, a silk hat-maker by trade, who opened on his own account in 1903, subsequently adding a small stock of other hats, has become involved and has assigned.——M. A. Soucy & Co., tailors, are reported to have compromised at 30 cents on the dollar. Soucy was unsuccessful before, having failed in 1901, and he has since done business under cover.——Hamelin & Aubin, doing a general store business in the small suburban municipality of Verdun, have assigned, and owe $5,480. They sustained a considerable loss by flood last year, and then compromised.

Mercantile Summary.

It is stated in Nelson that the zinc concentration plant at Rosebery, B.C., will shortly operate on the ores of the Monitor-Ajax and Bosun properties.

The Red Cedar Lumber and Shingle Mills Company's plant at Cedar Cove, near Vancouver, was burned down the other day at an approximate loss of $10,000.

An extensive belt of silver-lead ores of great richness is said to have been discovered in the vicinity of Maple Bay, near the Portland Canal, and great excitement prevails in the Port Simpson and Ketchikan districts of the Pacific Coast. The ore indications are believed to be on the Canadian side.

The steamer "Aorangi" left Vancouver a few days ago with one of the largest consignments of reapers, binders, and harvesters ever shipped from Canada to Australia. The Commonwealth's tariff duty on articles of this nature was recently raised very considerably. The "Aorangi" also took some 700 tons of Skeena River salmon.

Business men who desire to secure the services of a competent auditor or accountant may be pleased to learn that Mr. F. G. Garbutt, for many years connected with the Central Business College as a teacher of accountancy, has decided to devote himself to doing this class of work for the public. In addition to his teaching Mr. Garbutt has had much practice in auditing and systematizing. We are told that he has opened an office in the Temple Building.

The unsightly "sky-scraper" is coming into Canada, it seems. The Traders Bank is erecting a fifteen-story building on Yonge Street in Toronto and the Canada Life people are to erect a sixteen-story one on Main Street in Winnipeg. Next we shall hear of some Canadian putting up a twenty-story building—just to surpass the others. In place of welcoming such structures it would be well if municipalities should rigidly insist, as has been found necessary in Boston, upon restricting the height of buildings in proportion to the width of the street. The fire risk and the risk to human life are elements which should not be ignored.

The following items are from the mining notes of the Copper Cliff Courier of last week: At the Massey mine about 35 tons of 14½ per cent. copper is being treated by the Elmore plant every 24 hours. The mill is producing from 7½ to 8 tons of concentrates daily, averaging 21 per cent. of copper.——The Coleman & Buckle Consolidated Cobalt-Silver Mining Co., Limited, and the Windsor and Cobalt Mining Co., with capitals of, collectively, $1,150,000, were incorporated during August to operate in the Temiskaming mining division. ——One of the two Government diamond drills is being employed on the iron ore outcroppings in Temagami, the property of Mr. T. B. Caldwell, M.P., and others.

Telephone, Park 1318.

A plant for the reduction of zinc is being erected at Frank, Alta, by C. Fernan.

The Dominion Copper Company, we are told by a Vancouver newspaper, has practically decided to build a smelter on the North York River, near the Granby smelter. It will have at the beginning six furnaces, with one large stack, and is expected to cost about $750,000.

Uncle Rufus sez, sez he: "Lawd make us thankful fer all dat we receive, but teach us how ter keep out de hands of a receiver!" Another of the old man's aphorisms is: "Riches don't bring happiness, but dey kin give poverty three mile start on de road, an' den beat him ter de station."

⁂

TWO KINDS OF THIRST.

The great hope of Japan lies in the determination to educate her lower classes. When, a few years ago, some Japanese warships were in Sydney, what was the most remarkable feature concerning the men by whom they were manned? The fact that they passed all the drinking saloons and thronged the libraries and bookstalls. What made this remarkable was the very saddening fact that the men of the European and American navies usually pass the libraries and bookstalls, but crowd the drinking saloons. Now, other things equal, the general tendency is for the drinker to become, sooner or later, the servant of the sober man. And this principle will hold good all the more if to the quality of sobriety be added the desire to learn. With one nation thirsting for knowledge, and another thirsting for drink and pleasure generally, it needs no prophet to name the winner.—The Review, Sydney, Australia.

⁂

WHAT IT WOULD MEAN.

The latest report of the Interstate Commerce Commission states that more than a million persons are employed by the railroads of the United States and these million employees must represent at least 3,000,000 people. The report puts the wages and salaries paid these employees during the year 1904 at $817,598,810, which would give, if it were divided, $10.00 to every man, woman and child in the country. These figures seem almost incredible, and yet their essential accuracy is beyond doubt. They should be borne in mind whenever national ownership of public utilities is broached. To make one in 25 of our population, hitherto independent, dependent upon a Government salary by the taking over of the railroads, would go a long way towards making us a people of functionaries—a consummation devoutly to be avoided.—Boston Traveller.

* * *

TORONTO MARKETS.

Toronto, Sept. 20, 1905.

Drugs and Chemicals.—In the local drug trade business conditions are quite fairly active and prices remain steady. Firmness is discernible, though hardly so much so as was the case last week in carbolic acid and in camphor. In the staples, quinine and opium, not much change is apparent, and business is dull.

Dry Goods.—There has been a kind of after-exhibition lull in local requirements, though on the whole business still continues in good volume. The prices for all staple goods remain much as before. For dress goods there is a good demand, particularly for those of domestic manufacture. This, in fact, is one of the most hopeful signs of the times.

Flour and Grain.—Receipts of Manitoba wheat in Winnipeg continue heavy, but prices so far remain little affected. For Ontario wheat there is a somewhat inactive market, though millers are buying some for quick requirements. Bran and shorts are both a little easier. Some sales of ninety per cent. patents are reported at $3. Quotations for old crop flour, however, are variable at present.

Fruits and Vegetables.—The feature in the fruit market is the abundance of peaches, though their quality is not A1. This keeps prices rather low. Tomatoes are becoming easier. Potatoes are quite firm. Shipments of apples are light. Good stock is in excellent demand, but many shipments so far have not warranted good prices. Best apples sell in Liverpool at 14s. to 20s., while some are as low as 10s. and 11s. Total apple shipments to British ports last week were 44,813 barrels, against 81,863 for the same week last year and 125,120 for the previous year. So far this season 86,054 barrels have been shipped, against 127,704 for the same period last year and 304,209 in 1903.

Groceries.—All grades of refined sugars came down in York on Tuesday to the extent of 20c. per cwt., which was somewhat a surprise to the trade. Other lines of groceries are showing a fairly good movement. More interest is being taken in canned fruits and vegetables. Teas are only doing a hand-to-mouth business.

Hides, Skins and Leather.—The local market for hides continues a strong one. One freature of the trade is the heavily increasing importation by Canada of hides from Great Britain at the expense of the United States, from which country the shipments have materially decreased. Leather is extremely high in sympathy with hides, and in addition to this there is believed to be a shortage. Prices so far keep as they were.

Provisions.—Receipts of butter are becoming larger, but values remain much as before. Cheese also is very high, but buyers seem to be becoming more cautious. Eggs are more abundant and prices easier as a consequence. There is good demand for poultry. More interest is being taken in hops. Prices for old Canadian range around 25c. per lb. The English crop is reported very large.

Wool.—Very firm conditions continue to prevail in the local wool market. The results of the London sales will be looked for with great interest.

MONTREAL MARKETS.

Montreal, 20th September, 1905.

Ashes.—Under continued light supplies the advanced values of last week are fully sustained. Dealers continue to quote first quality pots at $5.25 to $5.27½; seconds, $4.75; pearls would realize $7.75 to $8, and are wanted.

Dairy Products.—While the receipts of cheese last week were 90,755 boxes, the shipments abroad were again light in extent, reaching only 50,125 boxes, so that some accumulation of stock on spot is going, and the British demand continues slow, though rather more enquiry is reported within the last few days, and a little better feeling prevails. Finest Ontario makes are quoted at 11¼ to 11⅜c., and fine Quebec's from 11 to 11⅛c. In butter, export demand is not very active, but quotations are fairly firm at 21 to 21½c. for finest creamery; good dairy makes would bring 18½ to

SWEET CAPORAL

CIGARETTES

STANDARD OF THE WORLD

SOLD BY ALL LEADING WHOLESALE HOUSES.

19c. Exports last week were 26,599 packages.

Dry Goods.—There is quite a pronounced disposition on the part of city retailers to grumble about the inactivity of trade, the weather of the past week having been a damp, dismal and depressing character, and collections from this source are reported on the slow side, but country collections are found to be fair as a whole, and travellers report favorably on the prospects for fall sorting trade.

Groceries.—Some increase is reported in the general movement, and reports regarding remittances are favorable as a rule. Prices for new pack of corn and tomatoes have been fixed by the Canners' Association, standard brands of the former being quoted at 85c., and of the latter at 95c.; inferior brands 2½c. per dozen less. The sugar market has taken another weak turn since last writing, the present factory price for standard granulated in barrels being $4.70, and the lowest figure for yellows is now $4.20. Molasses is in light demand, but fairly steady at 35c., in a jobbing way for Barbadoes. The first direct fruit steamer is now completing cargo at Denia, and the last direct boat has started loading at Patras. The market for Valencia raisins, for shipment by last boat, is rather in buyers' favor, with quotations of 14s. 6d. for fine off-stalk; selected, 17s. 6d., and four crown layers, 18s. 6d. Loose Malaga muscatels are quoted at 8s. 6d. for two crown; and 10s. 6d. for three crown. Walnuts are high, 107 francs per 100 kilos being quoted for true Mayettes; Marbots, 78 francs.

Hides.—Receipts of beef hides continue light, and values firm; the general quotation for No. 1 is 11 to 11½c.; but for desirable lots, 12c. per lb. is freely paid. Lambskins remain at 80c. each.

Leather.—The demand from boot and shoe manufacturers is still quite moderate, but values are all steady to firm. The general quotation for No. 2 mfrs. sole is 24½c, and for slaughter, 28 to 30c. Prices of black leather are stiff at the late advance.

Metals and Hardware.—Pig-iron is moving in fair quantities, and is firmer by 25 to 50c. a ton; we quote No. 1 Summerlee, net terms, ex-wharf, at $19 for car lots; No. 2 Summerlee, $18.50; No. 1 Carron, $19; Londonderry, $19; Clarence, No. 3 Middleboro iron, $17.50. The prices of bars are unchanged, and there is nothing new in sheets or plates. Ingot tin shows further easing off from late high prices, and is quoted at 35 to 35½c. in small lots; copper remains steady at 17¼c.; spelter is showing increasing strength, and is now held at $6.75 in an ordinary way; lead firm at $3.75 to $3.80, and the discount on lead pipe is reduced to 25 and 5 per cent.

Oils and Paints.—Orders are coming in in very fair volume, and the aggregate of the fall business is expected to reach satisfactory figures. Receipts of whale oil have been large of late, a new whaling company having got to work in the Gulf, and it looks as if there might be a glutted market; present quotations run from 35 to 40c. for good quality; cod-oil is dull at 35 to 40c., and for seal oil there is practically no demand; castor oil is rather firmer, and quotes at 7 to 8c. per lb. for mechanical, and 9 to 10c. for pharmaceutical; a cable to-day quotes linseed 5s. firmer for November delivery, but local prices are unchanged at 49 to 50c. for raw, in an ordinary way. Turpentine is steady at 91c. Window glass, firm at advance noted last week.

A. G. C. DINNICK, Managing Director.

Mercantile Summary.

The Lehigh Portland Cement Company are about to start construction on a cement factory at Belleville, with a capacity of 2,500 barrels per day.

An international exposition is to be held in New Zealand in November, next year, and it is not unlikely that the Dominion Government will have a good display illustrative of the natural resources and agricultural products of this country.

A St. John fish merchant, named P. A. Smith, carrying on a small business on Charlotte Street, has made an assignment. His liabilities are about $2,000, and assets nominal. Mr. Smith failed a few years ago, and was able to arrange to continue the business.

Mercantile Summary.

T. Long & Bros.' general retail store at Collingwood, Ont., was on Wednesday partially destroyed by fire, the estimated loss being $40,000 to $50,000, fully covered by insurance. The wholesale department was unharmed.

An interesting story comes from London, Eng., to the effect that a syndicate, of which the Hon. Hugh John Macdonald, K.C., of Winnipeg, is the Canadian representative, has offered to the Canadian Pacific Railway the sum of $70,000,000 for all that company's available lands in Manitoba, Saskatchewan and Alberta. The idea was to acquire the extra C. P. R. land grant in the West, and organize a company which would work with the C. P. R. and assist in every way possible to hurry the settlement of the lands. The offer, it is understood, was not favorably considered.

The propeller steamship "Melbourne," of Hamilton, was burned to the water's edge off Belleville, on Tuesday night. She was valued at $30,000. On the same day the barge "Roby" was completely destroyed by fire near Amherstburg, the loss being estimated at $40,000.

According to a Canadian Associated Press dispatch, the Newfoundland Government has decided to issue a loan of $2,000,000 at 96, bearing 3½ per cent. interest.

At a fire at the Alex. Brown Milling Company's mill and elevator in Toronto, property valued at perhaps $150,000 was destroyed, and Capt. Worrell, of the Berkeley Street Fire Hall, was enveloped in burning debris and killed, while another fireman was injured. At the enquiry which was ordered into the circumstances of the fatality, with a view to seeing whether lives had been unnecessarily risked, the conclusion arrived at was that the terrible accident had occurred as a result only of ordinary attention to duty. The insurance is figured at $22,000 on the building, $39,500 on stock, and $23,000 on machinery.

There was an agent of the Canadian Associated Press at the Liege Exhibition in Belgium. He cabled on Tuesday respecting awards to exhibitors that Canada had won eight grand prizes in the following:—Agriculture, forestry, fruits, fish and game, fauna, cereals, and tobacco. The Dominion did not compete in industries, but the Board of Jurors granted under the classification of paper-making honorable mention for Canada's pulp. In all the foregoing eight classifications Canada won thirty points in each, or the highest possible award. The Board of Jurors pronounce the present exhibit practically perfect, not eclipsed by any other country, which is good news for Canadians to hear. Commissioner Hutchison and his staff received many congratulations.

—On Saturday evening last, Mr. W. K. George, president of the Canadian Manufacturers' Association, was tendered a banquet at the Canada Club by the Montreal branch of that body. The guests numbered about seventy, and included the Mayor, Hon. Senator Rolland, Mr. Gear, President Board of Trade, Mr. Catelli, of the Chambre de Commerce, and various men, representative of the chief industries of the city. Mr. J. J. McGill, ex-chairman of the Montreal branch, proposed the health of the guest of honor, and congratulated Mr. George on the results of the manufacturers' trip to Great Britain. He referred to the tact which the president had shown throughout—a tact so remarkable that no harsh criticisms had been heard from even the most bitter opponents of the policy he had enunciated in his official utterances. The delegates' visit had proved a strong plea for Canada as a field for investment of British capital. Mr. George, on rising to reply, received an ovation. He outlined the results of the manufacturers' trip to Great Britain. In the course of his remarks he said that he had personally met no man in England of whatever political faith he might be, who did not acknowledge the fairness and justice of the Canadian manufacturers' contentions, and who did not recognize the necessity of protection for the encouragement of the industries of a new country.

⁂

—Tendencies in the raw silk market are still in an upward direction, says the New York Dry Goods Economist, and it seems as though prices are likely to remain very firm, just as long as the manufacturers continue to operate their plant in full. The latter are paying top prices for raw material, as they have no large supply, and while purchases are of a hand-to-mouth character, yet they are sufficiently continuous to warrant the firm attitude of importers. There is no doubt that in importing countries the situation is very strong, and that reelers are independent, but as long as the manufacturers are in the market, even for small amounts, this will remain the

prime factor in sustaining values. What the future may bring forth if the manufacturer continues to operate his plant in full without having orders for his full product remains to be seen, but just at present little evidence of a retrograde movement is in sight. From Yokohama it is reported that transactions have been liberal with considerable silk bought on American account. While business in the local market has not been as large on these quotations as in certain previous weeks, yet the volume of trade has been sufficient to keep depleted the very modest stocks in importers' hands.

TORONTO PUBLIC WORKS.

The annual report of the Engineer for the city of Toronto, which has just been issued, contains a mass of information concerning the administration and construction of public works, etc. The total expenditure of the department during the year, not including waterworks, was $1,054,039, divided as follows:

General and special works..	$440,347 24
Street railway track allowance pavements	11,364 92
Local improvements (including street extensions) ...	526,422 13
Department and sundry accounts	71,757 66
Island works	4,147 19
Total	$1,054,039 14

The amount expended for local improvement works was divided as follows:

Pavements and roadways ..	$344,818 79
Concrete and brick sidewalks.	151,563 20
Plank sidewalks	7,584 40
Sewers	20,451 20
Street openings and extensions	2,004 54
Total	$526,422 13

The total amount expended by the department during the year, including waterworks expenditure, was $1,578,422.33.

During the past year no less than 12,528 lineal feet of sewers was constructed, besides a large number of manholes, gullies, etc. The sewers in Toronto now measure over 240 miles in length. During the year the roadway department carried out 336 separate works and 62 private permanent walks, or a total of 398 works, being an increase of 31 over 1903, 74 over 1902, and 176 over 1901, and is the greatest number ever undertaken in one year by this department. The work included the construction of 41.75 miles of pavements and 31.05 miles of concrete and brick sidewalks.

The total receipts of the city from the waterworks during 1904 were $433,090, while the operating charges were $438,363, including the cost of collecting rates and the debt charges. During the year 31,244¼ feet of mains were laid, making at the end of the year 272.8 miles of water mains.

"MUST DIE TO WIN."

Wrong! Endowment Insurance enables you "to win" during your lifetime, at the end of 10, 15, 20 or 25 years, as you may select, and to enjoy the fruits of your savings for the rest of your life. It may do more. An Endowment Policy in

The Mutual Life Assurance Co. OF CANADA.

should you not outlive the term selected, will enable your wife and children, or dependent loved ones, "to win" a competence and thus protect them from the "cold charity of a pitiless world."

THE METROPOLITAN LIFE INSURANCE CO.

(INCORPORATED BY THE STATE OF NEW YORK.)

The Compony OF the People, BY the People, FOR the People.

ASSETS, $128,094,315.24

Proof of Public Confidence

This Company has more premium-paying business in force in the United States than any other Company, and for each of the last 11 Years has had more New Insurance accepted and issued in America than any other Company

The Number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec and Ottawa.

Significant Facts

This Company's Policy-claims paid in 1904 averaged in number one for each minute and a quarter of each business day of 8 hours each, and, in amount, $102.54 a minute the year through.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1904.

391	per day in number of Claims Paid.
6,561	per day in number of Policies Issued.
$1,426,700.50	per day in New Insurance Written.
$114,060.67	per day in Payments to Policy-holders and addition to Reserve
$73,326.8	per day in Increase of Assets.

Full particulars regarding the plans of the Metropolitan maybe obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave. New York City.

Amount of Canadian Securities deposited with the Dominion Government for the protection of Policy-holders in Canada, over $2,600 000.00.

Canada Life's Total Business

Think how many people will benefit from the amount of insurance carried in the Canada Life.

At present the Company's total business is

Over $105,000,000.00

The Sun Life of Canada had a triumphant year. Impossible to give the increases in this space—suffice it to say that never has the Company's motto "Prosperous and Progressive" been so magnificently maintained. Ask for leaflet giving the Record of 1904.

MONTREAL'S EXPORT TRADE.

A good idea of the general export trade of the Dominion is to be obtained from a perusal of the figures presented by the Montreal Board of Trade as to the shipments from that port since the opening of navigation this year, up to the 24th inst. The total shipments of wheat were only 4,196,000 bushels, as compared with 6,336,000 bushels for the corresponding period of last year. On the other hand, the shipments of Indian corn have been 4,909,000 bushels, against 2,091,000 bushels last year. Exporters claim that this double discrepancy is due to general conditions. For instance, the corn crop of the United States last year was large, and the surplus grain at the prevailing prices has found a ready market in England. On the other hand, wheat has been abnormally high, and as a matter of fact, no export business to speak of was done until the present large crops were well on to the harvesting point, as at that time the prices began to fall and come within the export basis. For the remainder of the year, therefore, there will probably be a large amount of wheat going forward.

Flour also shows a serious falling off this year, the shipments having been 237,000 and 554,000 barrels respectively. This also is doubtless due to the foreign buyer having been able to fill his requirements at a lower price elsewhere. Oats and barley have both been shipped in large quantities. Of the latter, 911,000 bushels have gone forward by way of Montreal, as against 272,000 bushels up to the same date last year.

Butter and cheese have held their own in export, the former particularly so. In fact, butter packages increased by 30 per cent., and the future of Canadian butter in the British market seems assured—that is, if the dishonest amongst our shippers do not themselves kill a promising industry. The quantity of canned meats sent by Canada to Britain is increasing from year to year. Apple shipments this year have been about half of those last season. The export cattle business fell off slightly as compared with last year, mainly owing to the high prices which have prevailed on this side of the Atlantic. With normal figures, the business would probably, however, have have shown a large increase. The figures are: Shipments in 1904, opening of navigation to date, 74,184 head, as compared with 72,728 head for the corresponding period this year.

* * *

CANADIAN WORKMEN AND MR. CHAMBERLAIN.

It sounds very pleasant and loyal for the delegates at the recent Trades and Labor Congress in Toronto to express sympathy with their brethren, the wage-earners of the United Kingdom, in their opposition to Mr. Chamberlain's tariff scheme. But the question which occurs and recurs to the mind of the unbiassed observer, is, have these people who are so glib with their resolutions even a glimmering idea of the thing or policy they condemn? Or do they condemn Mr. Chamberlain's plan merely because it happens that the manufacturers of the Dominion have, as a body, expressed their approval of it? We are not now taking the ground either that the manufacturers are right in seconding that policy, or that the working-men are wrong in condemning it. We simply voice the thoughts that we believe occurred to many people when they heard of the unionists' unanimous condemnation. The latter bears on its face the marks of undigested data, of insufficient thinking. The dear fellow-workman from across the Atlantic, for whom the Canadian unions are so full of sympathy—until he comes to Canada in search of work; is it not kind of his colonial kinsmen across the sea to be so thoughtful of his welfare?

But we forget. The Trades Congress in Toronto only passed its resolution against Mr. Chamberlain because the analogous body in Great Britain had done the same thing. Mr. Chamberlain's avowed object is to find a better market in the colonies for British wares, in other words, more employment for British workmen. Now, why should the British workmen object to that? And still more, why should their Canadian brothers sympathize with that objection, except it be from consideration of their own interests, which in a way would be jeopardized by any great success of the British manufacturing interests in the colonies. The Canadian trades-unionists, however, seized the opportunity, in arraigning Chamberlain, to assert their loyalty to their British brethren, so this explanation does not hold either. At any rate, there seems to be a general tangle all round, so that the most probable explanation would appear to be that none of the trades-unionists, British or Canadian, have a very clear idea of what it is they are resolutionizing against.

⁂

MUNICIPAL ACCOUNTS.

At the present time the subject of municipal accounting is one which is full of interest particularly when, owing to the manner in which public ownership is being boomed, it is so often necessary to recognize the differences of the problems presented as between it and the ordinary individual's bookkeeping. As pointed out in the Census Bulletin of the Washington Government, the main purpose to be aimed at is a classification of expenses showing the relative cost and efficiency of government in various cities, and the relative value of the objects for which the citizens are called upon to contribute. By this means the average man is afforded a means of judging as to what success has been accomplished in his own locality. But it is necessary that his opinion should be founded on something more substantial than a comparison with private undertakings of a similar character, which, as we have said, is not a satisfactory method. There is one great distinction to be borne in mind, as the Bulletin points out:

> A private individual is in a sound financial condition when he has a greater sum of wealth or property than he is likely to be called upon to pay to others. This, however, is not true of governments. Government fiscal systems do not rest upon a property, but upon a revenue, basis. So long as sufficient funds to meet all liabilities can be obtained without the imposition of undue taxation, a government is in a solvent condition. This implies a difference in the mode of stating municipal and private finances. The object in commercial accounts is to show the cost of conducting the business, gains or losses, and the balance between liabilities and assets. The object of sound municipal accounts is to display not only relative cost of government for various objects, but also the sources of the revenue obtained by the city and the relations between the cost of government and the kinds and sources of public income.

No doubt there can never be absolute uniformity in accounting between a city like Toronto, Winnipeg, or Montreal, and say a country village of a few hundreds of population. It is true, however, that some of the leading facts bearing on income, expenditures, outstanding debt, and per capita cost of government can be stated in practically similar terms for large cities and small towns.

If anything worth while is to come of this idea of comparative statistical work, regularity and continuity are imperatively needed in the publication of the returns. The United States Census Office, we believe, is about to have this carried out on quite an enlarged scale, and this is a feature which might be followed with advantage in Canada.

⁂

FINANCIAL REVIEW.

We present below a condensation of the monthly statement of Canadian Banks for August, 1905. It is compared with the Bank Statement for the previous month, and shows capital, reserve, assets and liabilities, and average holdings of specie, Dominion notes, etc. The full statement appeared in our columns last week:

Canadian Bank Statement.

LIABILITIES.

	Aug. 1905.	July, 1905.
Capital authorized	$100,646,666	$100,246,666
Capital paid up	83.017,104	82,756,410
Reserve Funds	57 020,468	56 781,223
Notes in circulation	$62,497.433	$61,277,593
Dominion and Provincial Government deposits	9,562,962	9,613.155
Public deposits on demand in Canada	140.733 488	137.597.485
Public deposits after notice	340,653.284	336,505,877
Deposits outside of Canada	52 567,794	48.477,265
Bank loans or deposits from other banks secured	449.391	502,417
Due to other banks in Canada	4.819,190	4,724.411
Due to agencies or other banks in Great Britain	6,558.083	6,570.835
Due to other banks in foreign countries	1.875 301	1,462,661
Other liabilities	13.157,494	11,857,190
Total liabilities	$632,874 487	$618,588,963
ASSETS.		
Specie	$19,612 983	$18.929,396
Dominion notes	38,235 207	36.598,662
Deposits to secure note circulation	3,410,334	3.405,213
Notes of and cheques on other banks	20,697.176	23,197,622
Loans to other banks, secured	449.450	502,120
Deposits with other banks in Canada	6,220,195	6,455,043
Due from agencies or other banks in Great Britain	9,644.699	5,455,340
Due from banks or agencies in foreign countries	24,022,862	21,339,923
Dominion and Provincial Government securities	8.785,089	8,770,087
Other securities	59 880,714	59,468,372
Call and short loans on bonds and stocks in Canada	44,522 543	43,620,194
Call and short loans elsewhere	58 976,531	51,254,965
	$294.457.783	$278,996,937
Current Loans in Canada	437,440.914	438.069,270
Current Loans elsewhere	25,745.356	24,482,533
Loans to Dominion and Provincial Governments	1,358,164	1 731,801
Overdue debts	1,907 160	1,699,544
Real estate	788,490	767,767
Mortgages on real estate sold	528,298	530,195
Bank premises	10 632.222	10.577,223
Other assets	9.568,861	9,443,007
Total assets	$782,427,427	$766,318,465
Average amount of specie held during the month	18,430,899	17,845.364
Average Dominion notes held during the month	36,980,475	36,213.133
Greatest amount notes in circulation during month	64.486,151	63.516,010
Loans to directors or their firms	8 586.101	8,680,204

August is the last of the quiet summer months, the farmers being busy garnering their crops, and business men taking holidays, or preparing for the fall trade. The consequent dullness in business is reflected in the bank returns for the month, the figures presenting few changes of interest. Notes in circulation have increased $1,200,000 during the month, and about $2,300,000 during the year. During September the expansion due to the moving of the crops begins, and by the end of this month we may look for a substantial increase in the amount of notes in circulation. In September of each of the last two years this increase amounted to almost $3,500,000, followed by another increase in October of from $7,000,000 to $9,000,000, or $10,000,000 to $12,000,000 in all. With crops generally far better than last year and with a yield of wheat in the North-West of from seventy to eighty per cent. in excess of the crop of 1904, we may reasonably expect an expansion in note circulation this fall of from $12,000,000 to $15,000,000. No bank may issue notes in excess of its paid up capital, and several of the banks are already nearly up to their limit. If we examine the condition of the fifteen banks which have the largest note issues, we find that the following can be of little assistance in supplying the additional circulation which will be required:—

	Paid up capital.	Notes in circulation.	Available margin.
Bank of Nova Scotia.	$2,334,000	$2,235,000	$99,000
Bank of Ottawa	2,500,000	2,339,000	161,000
Union Bk. of Canada	2,500,000	2,295,000	205,000
Molsons Bank	3,000,000	2,752,000	248,000
Bank of Hamilton..	2,415,000	2,145,000	270,000
			$983,000

The total possible increase in the combined circulation of these five banks is thus $983,000, but if from this be deducted the amount required to insure against an accidental over issue, it is evident that about $500,000 is the utmost that is really available for use.

The banks upon which the country really depends to provide the necessary notes are:—

	Paid up capital.	Notes in circulation.	Available margin.
Bank of Montreal..	$14,400,000	$9,053,000	$5,347,000
Canadian Bank of Commerce	9,793,000	7,149,000	2,644,000
Merchants Bank of Canada	6,000,000	3,744,000	2,256,000
			$10,247,000

These three banks are thus able to supply something over $9,000,000, while amongst other banks which can render assistance are the Bank of British North America, the Imperial Bank of Canada, the Bank of Toronto and the Traders Bank of Canada, which between them can furnish about $3,000,000 more. The balance will be provided by the smaller banks.

Public deposits in Canada still continue to grow, the total being now $481,000,000, as against $434,000,000 in August, 1904 and $385,000,000 in August, 1903. To this add $9,000,000, the amount due to the Dominion and Provincial Governments, and $52,000,000 of deposits outside Canada, and we have total deposits in Canadian banks of $542,000,000.

Total liabilities are $632,000,000 as compared with $559,000,000 in August, 1904, and $505,000,000 in August, 1903.

The amount of specie and Dominion notes held is increasing, though not out of proportion to liabilities. During the last three months the figures have been:—

	Specie and Dominion Notes held.	Percentage to Liabilities.
August	$57,800,000	9.4
July	55,500,000	8.9
June	53,700,000	8.8

In the three corresponding months last year the position was.:

	Specie and Dominion Notes held.	Percentage to Liabilities.
August	$50,900,000	9.1
July	49,300,000	8.8
June	48,700,000	8.7

The second line of reserves has been considerably strengthened during the month. Balances due from British and foreign agents have increased by nearly $7,000,000, call loans in Canada by nearly $1,000,000, and call and short loans elsewhere by over $7,000,000. An addition of $15,000,000 to assets readily available is not a bad preparation for the active business which the next few months will probably bring. Current loans in Canada, on the other hand, show a slight reduction, which is not unusual in August. Last year the decrease was nearly $6,000,000, as against $600,000 now.

During the last five years current loans in Canada have stood as follows:

31st August, 1901	$280,758,000
31st August, 1902	296,711,000
31st August, 1903	368,641,000
31st August, 1904	408,240,000
31st August, 1905	437,440,000

An increase of 56 per cent. in four years may certainly be considered satisfactory, even if the pace now is not quite as fast as it was a year or two ago.

Overdue debts have slightly increased, due, apparently, to the steps taken by the Bank of Montreal to liquidate some of the unsatisfactory accounts taken over from the Peoples Bank of Halifax. Total assets stand at $782,427,000, as compared with $701,630,000 in August, 1904, and $646,640,000 in August, 1903.

During the last month ideal weather for harvesting has prevailed throughout nearly the whole of the North-West, and the crop ripened earlier than usual, so that practically all the wheat has been harvested and threshing has become general. It now seems certain that the yield will approach 100,000,000 bushels, as against 56,000,000 bushels last year, while the grain is of distinctly better quality, and the proportion of low grade is comparatively small. The price this year is lower—79 cents for No. 1 Northern, as against $1 last year; but even allowing for this, the money value of the wheat crop in the North-West will exceed 1904 by probably $23,000,000. Add to this the value of the increase in oats and barley, and after making due allowance for grain retained for seed, it will be seen that the farmers in the North-West Provinces will receive for cereal crops alone probably about $30,000,000 more than they did last year. In the newer portions where cultivation is just beginning the farmer will doubtless have very little surplus, but in the districts which have been settled for years this should be a year when old accounts are liquidated, and a small nest egg put away in the bank. So far as can be seen, one thing only can prevent this—the desire of the normal western farmer to put into land every dollar he can spare. The local bank manager, if the right kind of man, has a good deal of influence with the community among whom his lot is cast. If this year he can persuade his farming customers to pay up their machine notes and store bills and start the new year with a clean sheet, he will have done a good deal towards the continuance of the present prosperity.

* * *

THE GROCERY TRADE.

The volume of trade in general groceries is not large. While in Toronto the wholesale merchants are not making any serious complaint, the same can hardly be said of Montreal. It is difficult to understand why, in the present highly prosperous state of the country, and with the farmers only just through harvesting very satisfactory crops, trade in this particular line should not be brisker. Many people believe that it is to be accounted for by the fact that many retail merchants have their money tied up in speculative schemes of one kind or another. Certainly this is true of the far West, where the purchasing of land for get-rich-quick purposes has been carried to an extraordinary extent. But in the eastern provinces the same tendency is perceptible, though the speculation is not so much perhaps in real estate as in miscellaneous industrial and financial enterprises, some of them sufficiently risky to cause dubiousness as to the ultimate consequences. One effect, indeed, may be noted, and that is in the slowness of collections which, under the above-noted conditions of prosperity, is a thing which should be far otherwise.

Of late, attention has been largely occupied by the situation in canned goods. For tinned vegetables prices have now been put on a definite basis. Little stock of old stuff now remains on the market, so that the new pack has a fair field. Tomatoes are quoted at 20c. less than quotations for last year's crop at this period, but there is considerable firmness observable. Corn is somewhat unsettled, though the position is strong, and recent Ontario frosts will serve to make it still more so. Pacific Coast salmon is quoted very strong. The pack, it is true, was large, but new markets have been opened up of late years, more than sufficient to absorb any surplus.

Sugar values continue to fall, and another decline has taken place this week. In New York the position of sugar is still very weak. It is not impossible that still further drops will take place. Stocks of molasses are in small compass in Canada, and some believe that prices will advance before long. Syrups are held firmly, particularly corn syrup. All grades of tea are being pushed along on a constantly strengthening market. Chinas, Japans, and Ceylons, are all held firmly. Stocks are on the short side.

In dried fruits a good deal of activity is being displayed. Currants are now on a less unsettled basis, as the new Grecian syndicate has begun operations. Valencia raisins show a slight decline, while it is expected that Californias will open up at rather high prices. Seedless have gone up 3c. per lb. already. The outlook for both varieties would appear to be good. Sultanas are in good supply, and values have gone down a little. Prunes are likely to be high, owing to the shortage in California. Figs, both Comadres and Turkish, are advancing. Miscellaneous grocery articles, like tapioca, rice, etc., are firm.

* * *

THE CANADIAN CIGAR INDUSTRY.

Strong efforts are to be made by both manufacturers and growers to develop the domestic cigar manufacturing industry of Canada. In the last nine years, since the duty of 10c. per pound was levied on smoking and chewing tobacco, the consumption of the Canadian article has increased by 3,000,000 pounds, or about one-half of the whole. In the way, however, of an increase in the consumption of purely Canadian cigars, there are the excise requirements and certain regulations regarding different stamps for domestic and imported tobaccos. At the present time a separate factory is required for domestic and for imported tobaccos, it being against the law for a factory stamped for one class to use tobacco of another class. The Canadian Cigar Manufacturers' Association met together the other day and discussed a proposition to ask the Government for an increase from 10 to 20c. per pound in the duty on raw leaf, and to abolish the stamp regulations, and with these reforms it is believed the Canadian grower can control the home market. They will also press for a considerable reduction in the total taxation of cigars made in Canada. The present excise duties are $8 per thousand on domestic cigars, compared with $6 per thousand in 1896, which the manufacturers think is sufficient. We may mention that some material improvement in domestic leaf will be required before consumers of average taste will be content with a purely Canadian cigar, but the growers have already shown great intelligence in the way they have improved other branches of their product, and it is very likely they can do the same in the cigar leaf.

It should not be understood, however, that the manufacturers were a unit in resolving on these measures. Some of them consider that the Canadian leaf is as yet at such a stage that it cannot hope to take the place of the imported article for some years to come. They think, too, that it would not be fair to the public to do away with the green stamp denoting domestic tobaccos, or the red one showing a mixture of Canadian and imported leaf. The Government should see to it that consumers are in a position to know what they are buying.

* * *

FIRE INSURANCE IN CANADA

Since we published, in April and May last, abstracts of the principal figures illustrating fire and life insurance in Canada in 1904, the advance sheets of the superintendent's report have reached us from Ottawa. This shows that thirty-eight companies reporting to the Dominion transacted business here in that year, namely ten Canadian, nineteen British and nine American. The new companies are the German-American and the Montreal-Canada, and two of the companies of other years have retired—the National, of Ireland, and the Manchester.

While the business of 1903 had proved a satisfactory one, the ratio of losses to premiums having been only 51.57 per cent.—premiums, $11,384,764 and losses $5,870,716—that of 1904 was disastrous, for when the aggregate premium income of these companies was $13,169,882 their outgo for losses of the year was $14,099,534. That is to say, for every dollar of premium they took in, a dollar and seven cents was paid out. This is the worst record since 1877, the St John fire year. The reason was, of course, the conflagrations in Rochester and Toronto. Canadian companies fared better, relatively, than either British or American, as the following comparison will show:

	Paid for losses.	Received for premiums.	Loss per cent. of premiums.
Canadian companies.	$2,561,475	$2,681,275	95.53
British " .	9,172,919	8,343,666	109.94
American " .	2,365,140	2,144,941	110.27
Total	$14,099,534	$13,169,882	107.06

But the total premiums fell short of paying the total losses by $929,652. If to the losses paid be added the expense of conducting the business, say 30 per cent. of the premiums, or $3,950,964, there is a balance of nearly five millions of dollars ($4,880,616) against the companies on the year. The losses paid per cent. of premiums taken were in the preceding year 53 per cent., 51.86 per cent., and 48.49 per cent. in the Canadian, the British, and the American companies respectively.

It is made clear by a table on page vi. that during a period of thirty-six years from 1869 to 1904 inclusive, the losses of fire insurance companies reporting to Ottawa were $140,309,000, being equal to 69.61 per cent. of the $201,575,000 received for premiums. If we add to this thirty per cent. for the expense of conducting the business we shall find that there is no room for a decent profit on the business.

True, an improvement in the ratio of premium to risk has been effected in the last few years, for where in 1900 the rate was 1.25 on an average, it was 1.42 in 1901; 1.47 in 1902; 1.50 in 1903, and 1.60 in 1904. The gross amount of policies new and renewed taken during last year was $1,002,305,105, as compared with $933,274,264 in 1903. Of this total the share of Canadian companies was $239,234,027, or 23.86 per cent.; of British companies, $609,942,293, or say 60.85 per cent.; and of American companies, $153,128,785, or 15.29 per cent. So that, roundly, the British and American companies do three-fourths of the business; the Canadian the other fourth.

* * *

THE EGOTISM OF THE WEST.

To The Monetary Times.

Dear Sir,—Is it not time to call a halt on the colossal presumption, the enormous egotism of the West? In common with other Canadians of "the effete East," I feel gratified that the North-West portion of Canada has been found to be not the arid, frosty waste it was believed at one time to be. I am glad that people from every part of the world are coming into that part of our country in such numbers, and that the West, as a section of Canada, is prospering so greatly. Nevertheless, it is after all only a part of our great Dominion, and I, for one, refuse to bow my knee to it as to an idol, as though it were the "whole thing," as the vulgar saying has it. To read the average Western newspaper, to listen to the typical Western man, one would imagine that only the West is doing anything, that all the progress of Canada is going on there, and there alone. We are asked to fall down and worship Western development, Western enterprise, Western everything.

Now, far be it from me to cavil at the rate of progression which is to be seen in Winnipeg and beyond that city. But the truth is that, if the resources of that section be as enormous as they are claimed to be by the Westerners—and I am not disputing the point—the shame would lie on the latter for not developing at a rapid rate. Their talk of the slowness of the East seems to me, therefore, to be largely balderdash. They are young, the West is young, but because they are at present growing in a much quicker ratio than Ontario, for example, do they think that ratio will keep up for all time until the East is hopelessly distanced? An infant will double its weight and size in a year or so; but it will not keep up that rate for very long. The speedy development of the West has been due largely to fortuitous circumstances—the bounty of nature in a series of good crops; the prosperity of practically the whole world; the tide of immigration by American farmers, who found a chance to sell high-priced land and buy lower-priced. Why, therefore, should we be called upon to take lessons from the West in enterprise and empire-building? The first pioneers in Ontario did a work which, if the men who are now settling on our level Western plains were asked to duplicate it, would fill them with dismay. What do the Westerners know of the forest to be felled before even a dozen bushels of wheat could be raised? What of fierce tribes of Indians, such as the Americans have had to face? With competing railroads at their doors, what can they know of the trials and perils of finding a precarious market? The Western farmer has the eyes of the whole world upon him, to egg him on and hear him boast; the early Ontarian had none of that; he could only feel grateful if he came through the season alive. Yet we are asked to admire the marvellous way in which the Western man moves on from one conquest to the other, and we are asked to see in the West the hope of Canada, the section which will ere long—in five years, is it not?—wag the whole body commercial and political.

With all its wonderful broad-minded magnanimity, too, the West hates to receive a hint from the grovelling East—hates it to be suggested that the East has ever done anything to help the development of which we hear so much, hates to hear even a suggestion that present prosperity makes a fine opportunity for the payment of just debts. No, it prefers to go on building up largely on Eastern capital,—building up and leaving the slow-moving East far behind.

Such is the refrain that comes to one's ears all the time. "We are quick and great—you are slow and crawling." One hears it on the prairies, one hears it above all on the streets of Winnipeg. A dozen times in the course of a visit, one's attention is invited to the aspect of the native Winnipegger. Look at his hustling, bustling walk, look how he is always busy, up to the eyes in work. The stranger is told the same thing so often that he comes to the conclusion that this is the Western man's special fetich, and lets it go at that; or he is hypnotized by constant reiteration into seeing as they do, and then adds his own little boom to the intense enterprise of the West. But I have said enough. I like the West, but don't want to see it eaten up with its own conceit. The time has come for the East to assert itself, and that is why, without qualms, I sign myself,

"ONTARIAN."

Hamilton, September 25th, 1905.

HERE AND THERE IN LONDON.

With the Canadian Manufacturers' Association.

Going along by Charing Cross and around Trafalgar Square in London was a huge red and gold electric van, bearing upon its front the words, "Canada the Granary of the Empire," and on the sides, "Grain and Fruit Unsurpassed," with a brief record in big letters of "Canada's Advantages." In that busy neighborhood the Dominion is brought well to the attention of a London public. The Canadian Immigration offices are close by Charing Cross, their windows filled with specimens of the richness of our products of the soil, and its great sign can be read far and near. The C. P. R. offices strike the eye readily from a distance, and are very handsome as to the interior. Close by, too, are the cosy premises of Hiram Walker & Company, whose Canadian friends are always welcome; and almost next door to it, at 21 Cockspur Street, is Hamilton Grant McMicken, who, although representing an United States Railway (Jim Hill's Great Northern), is one of the truest and best-known Canadians in London. Going thence round by the river and passing Westminster Bridge and Abbey, one reaches Victoria Street, where are situated the offices of the High Commissioner for Canada, and here it did one good to read the array of names of Canadian callers.

Attention of our travelling party was called to "A bit of Old London," at the bottom of Gray's Inn Road, near the Holborn Viaduct, consisting of ancient houses. And, again, when returning from a trip to Woolwich Arsenal, the boat slowed up to permit a good look at a remarkable group of ancient English houses at Wapping Old Stairs, having what looked like toy galleries and childish stair-cases leading to the water. Such houses as Charles Dickens and Walter Besant loved to draw. There was "The Harbor Master," which might have justified its title as a residence of that official long ago, but is now a sort of inn, perhaps a sailors' crib, if such things still exist. Here and there about London are yet to be seen Elizabethan houses, such as may be seen in the quaint city of Chester. At 109 Fleet Street is "The Cheshire Cheese," a resort of Samuel Johnson in the eighteenth century, which at my visit was pretty well filled, as to the tables, with Canadian and American visitors, votaries of pastry and old ale, each of whom wanted in turn to sit in the burly Doctor's accustomed seat, which is marked by a brass plate.

We could never see too much of the London streets. Naturally, from the fact that our headquarters were at one of its big hotels, the Strand was most familiar to us, and a wonderful street it is, with its kaleidoscope of vehicles and humanity, the ever-changing aspect of its perpetual traffic. To see fashion, or to do fashionable shopping, of course, one had to go to the district of Regent Street. But to drive about the city in hopes "to see London" is a huge task, almost as great as that of the fabled unfortunate (called by an American humorist "Old Sisy"—for short) who was condemned to roll a huge rock to the top of a mountain every day—only to find that it would roll down again every night and he would have to begin again. The great size of London was expressed by the French writer, Henri Taine, in this curious but graphic sentence: "Enormous, enormous—this is the word which always recurs. It is necessary to take a cab several days' in succession and proceed straight on towards the south, towards the north, the east, and the west during a whole morning, as far as the uncertain limits where houses grow scanty and the country begins." And Grant White, writing at a later date, declared that he "never got to the end of London unless I took a steam engine into service. Cabs and omnibuses were of no avail. I used them but generally walked. Within these boundless stretches of streets and of houses so same, and yet each with a physiognomy of its own. . . . I began to understand the long indifference, and the ignorance, born of indifference, of Englishmen to the country which lay beyond the horizon-edge of the ocean."

The profusion of gold lace on the clothing of hotel servants is embarrassing. One hesitates to offer three pence to a gorgeous being with illuminated store clothes and a belt. His wrist, waist, shoulders, trousers, cap, blaze with gold. And the one thing which distinguishes him from army and navy officers is the ten-times repeated "Sir," with which he interlards his replies.

If to be received by Royalty was unlooked for, it was equally unexpected by the delegates to have such a welcome from the clergy as they did on Hospital Sunday at Westminster Abbey. A large body of us were gathered in that venerable fane, and heard a sermon by the Bishop of Southampton, on the rich man and Lazarus. The service was full choral, and the worshippers were two hours in the church. Nothing in the way of a description can serve to indicate the beauty and appropriateness of the ritual, while the sweetness of the boys' voices went to the heart. The preacher made appropriate reference to our presence in the church, and closed with the somewhat striking passage: "We wish them good luck in the name of the Lord," i.e., the clergy take part in the welcome to the Canadians, as well as the merchants and the municipal bodies.

THE DOMINION EXHIBITION IN BRITISH COLUMBIA.

Not very many years ago the proposition to hold a Dominion Exhibition in the far western province of British Columbia, and at a place such as New Westminster then was, would have been considered the idea of a crazy man. Now, it is an accomplished fact. The Exhibition at New Westminster, a city twelve miles from Vancouver, which, as its promoters have received the $50,000 grant from the Federal Government, is warranted in styling itself the "Dominion Exhibition for 1905," opened on Wednesday last with every prospect for the most gratifying success. Early reports tell that products of the farm, the mine and the forest, as well as of the manufacturer's skill are to be seen in full abundance and in their full glory. And, as is meet with a Dominion Exhibition, they come from every part of Canada. The exhibits from British Columbia's rich agricultural sections around Chilliwack, the Delta, Kent, etc., are said to be notably fine, while Edmonton and far-away Yukon, as also as great prairies, are well represented. In Machinery Hall, the manufacturers of the eastern provinces are naturally the predominant feature, and they make a good and representative showing. A great drawing card is, of course, the mineral exhibit, mining being British Columbia's strong point, though it looks as if fruit-growing will in the near future prove a noteworthy rival. The live stock show is, according to all reports, remarkably fine. It is three times the size of that of last year, though that was a good one, and it is augmented this year by a number of pedigreed animals from the Portland, Oregon, Fair.

* * *

BANKING AND FINANCIAL.

At a meeting of the board of directors of the Standard Bank of Canada on September 26th, F. W. Cowan was appointed a director to fill the vacancy caused by the death of the late T. R. Wood.

We are informed that the Sovereign Bank of Canada has opened a branch at Thorndale, Ont. Mr. G. J. Lackner, formerly of the Toronto branch of that bank will have charge of the office, and will be assisted by Mr. W. A. Fisher of the Exeter branch.

The Canadian Bank of Commerce has opened new branches at Brandon, Man., and Vegreville, Alta. Mr. A. Maybee has been appointed manager at Brandon, and M. H. I. Millar is temporarily in charge at Vegreville. It may be mentioned that the Bank of Commerce has now 127 branches, of which 121 are in Canada.

At a meeting of the directors of the Consumers' Gas Company, held in Toronto on Tuesday last, George R. R. Cockburn, M.A., was elected president, and J. L. Blaikie vice-president of the company. Hon. W. Mortimer Clark, K.C.; John Hoskin, K.C., LL.D., were elected directors in place of Dr. Larratt W. Smith, K.C., and Thomas R. Wood, recently deceased.

It is more than six years since La Banque Ville Marie, of Montreal, closed its doors, which should, indeed, have been closed long before for violations of the Banking Act. The last dividend out of its assets is only now being paid. The paid up capital of the bank had been misrepresented as being $470,000 when it was only $250,000, and the circulation as $214,000, where, as a matter of fact, it was $550,000. Deposits were somewhere near a million and a half. Some time before the stoppage the Government called upon the bank to reduce its circulation to the extent of $300,000. These notes should have been burned, but through fraud on the part of officials, they were issued again, the face value of the same going into the pockets of those who wrecked the institution, among whom were the accountant and a paying teller. The bank had twenty branches, of which six were in Montreal and suburbs, and the suspension made great excitement among its depositors, who were mainly French Canadians, who started a run upon two other French banks, which, however, came to no harm

LIFE AND ACCIDENT ASSURANCE.

Saving by strict economy, a salaried man should take insurance as a life guard against an event that would stop the salary.

The autumn meeting of the Actuarial Society of America will be held on 10th October. The meeting-place of the fall session of the Actuarial Society of America has it appears been changed from Quebec to New York. The occasion for the change is the interest felt by all actuaries in the proceedings of the New York legislative committee. The Society will continue in session on 11th October.

Accident insurance has a sentimental side, as everything must have which deals with possibilities of life and death—of plenty and penury—of a widow and children in comfort, or in tears and cheerlessness. But it has a strictly business side—which should appeal to the worldful of strictly business men. With by far the great majority of workers the only sure capital is life and health and strength. Even these are not really sure, because death may snuff out the vital spark, sickness temporarily or permanently snatch away the earning power, or sudden disaster crush the bodily members into uselessness. The possibility of accidents has its share in all these contingencies, and the rceords show how important a share it is. Here is a risk or loss against which accident insurance cheaply and surely provides. It is a hazard which business men may meet and cover in a business way.—Indemnity.

Why not drainage insurance? That is the abrupt demand of a Bristol bookseller, and nobody is prepared to say why drains should be excluded from the cover of insurance. Since Pasteur discovered the bacteria a good half of our people have lived under varying stresses of germ-fright. When we buy a house nothing gives cause to more dubitation than the probable state of the drains. And there are unfortunately too many house agents and professing experts who delude us as to the truth, just as there are too many rascally builders who run house drains up hill, dispute sanitary inspection, in order to save themselves a small outlay firstly, and to ensure a second job in putting matters right. But if drains, and the proper working of drains, were insured and certified and examined by the companies, the policy would soon become indispensable. Boiler insurance has made it all but impossible to sell a boiler which has not the insurance company's certificate. So it might be with house and other property, and though we can insure against any contingency at Lloyds, the case can only be adequately met by the attentions of some *ad hoc* or miscellaneous insurance office.

Discussion of the misdeeds of insurance agents brings to light a case in the north-east of England. The representative of an industrial life office, upon some pretext of payment being behind, insinuated himself into the position of manager of the funeral. He had to deal with ignorant folk, and was, therefore, able to nominate a friend as undertaker, and to control the funeral expenses. The policy was not a large one, but none of the proceeds was left. The ghouls charged so much for a coffin, hearse, and the pair of boots, bought to enable a destitute boy to walk behind his father's body, that the widow got not a penny in cash. The pity is that one cannot add that this despoiler of the fatherless is in prison. It is an ugly fact that certain agents have a way of recommending particular undertakers to their clients. While giving Canadians this peep into our side of low life in England, let me add that undertakers of this kidney blankly refuse to carry the remains out of the house until their little bill is footed. More scandalous still is a practice which can apply only to few cases, but there is little doubt that low-class medical men have hired themselves to canvass for custom for friends in the funeral-furnishing line of business.

TRADE NOTES.

William Ryan & Company, Toronto, have taken over the building and plant of the Wellington Dressed Beef and Cold Storage Company at Fergus, Ont., and will enlarge them and extend the business.

The United States Government is taking steps to end the rebate evil. Four officers of a large Chicago packing firm have already been fined an aggregate of $25,000, following a plea of guilty to indictment charging conspiracy to accept railroad rebates. Cases against Armour & Company and others are yet to come off.

Our Montreal market correspondent says that the first direct steamer with dried fruit for the St. Lawrence has cleared from Denia, in Spain, with a Mediterranean cargo. The steamer, "Jacona" is intended to leave Patras, in Greece, this week, and will complete her cargo at Messina, in Italy, and at Cadiz, Denia, and Malaga in Spain. What he says about currants and Valentia raisins is of interest.

The Dominion Government analyst at Ottawa has completed the examination of 60 samples of black peppers and 86 samples of white peppers. Of this number only 40.7 per cent. were found to be undoubtedly genuine and 47.7 per cent. were proved to be adulterated. Samples were collected all over the Dominion. Wheat flour was found to be a common ingredient of adulterated commodity. Other foreign substances found were maize, starch, stone cells, and wheat starch. The percentage of foreign substance ranged from 1 to 16 per cent.

The rice crop in Texas promises this year to be of good yield and quality, but as the area planted was considerably less than average, it is likely that the result will be comparatively small and that prices will rule high. The acreage is estimated at from 25 to 40 per cent. less than last year, and the prices are expected to rule higher in almost equal proportion. The rice crop in Japan is reported to be very poor, owing to heavy rain fall. It is likely, however, that this fact will bring about a greatly enhanced demand for flour. This, we imagine, should give a good chance for Canadian winter wheat.

A report comes to hand from New York as to the position of raw cotton. The market, it says, has been forced to endure the weight of considerable liquidation and selling from sources which indicate a rather heavier outside interest in October than heretofore suspected, in conjunction with the lower cables and good weather in the south. The near future of the market may reflect further liquidation of October contracts. among these interests not prepared to accept delivery on Friday, and in this event some further loss in value may be secured. It is not expected, however, that the movement to advance prices will be abandoned, and a reaction of some importance may be looked for to follow the decline.

The Canadian trade agent in Bristol points out that that market has of late years not been sufficiently supplied with direct imports of Canadian fruit. The result is that the district supplies its wants from London or Liverpool, thus necessitating double handling, and increased transportation charges. The saving of freight charges by shipping to Bristol would be considerable, and from that point the Midlands could be supplied. An important improvement has been made lately to Bristol's shipping facilities by the practical completion of the new Royal Edward dock, and Mr. MacKinnon states that the docks authorities look to Canada for a large proportion of their trade. In fact, they are sending out an official to Canada with the object of convincing shippers and manufacturers here of the advantages possessed by Bristol as a distributing centre. At the docks arrangements are being made for the cool storage of Canadian cheese.

FIRE INSURANCE ITEMS.

The Fire Underwriters' Association of the North-West is to hold its thirty-sixth annual meeting in the Music Hall, Chicago, on October 11 and 12. The programme contains the following items besides the president's address. A paper on "National Supervision of Insurance," by Hon. James M. Beck, of New York; one on "Improved Construction of Buildings," by A. A. Maloney, of Kansas City; one on "Insurance Legislation and Supervision," by Zeno. M. Host, Commissioner of Insurance for Wisconsin; "Sentiment in Underwriting," by C. F. Shallcross, of New York; "The Fire Marshal, His Duties and Opportunities," by Henry D. Davis, State Fire Marshal of Ohio, which is sure to be interesting; one on "Chemistry of Fires and Chemicals in Fires," a most important subject; and one on "Over-looked Hazards," by George A. Mowry, of Minneapolis.

The Parisian authorities have hit upon several useful features, from a sanitary point of view, for their building regulations. According to the latest by-laws on the subject, fifteen cubic yards of breathing space must be allowed to each person living in a house or tenement, and the distance between the ceiling and the floor of any living room must not be less than eight feet. It is forbidden to use wall-paper; the walls must be of plaster, and must be white-washed with lime at least once a year. All paint work must also be renewed once a year, and the paint must be of a light color. Every room must have good ventilation and direct light from the outside, and no living rooms are to be allowed on the basement or in cellars. There must be at least one water closet for each twenty persons, and the floors of every room are to be washed very frequently.

* * *

—The feeling in English wool centres is displayed effectively in the following letter from Bradford, York: "It is, of course, impossible to ascertain the actual size of the stocks of wool in the manufacturing districts of the world at the present time, but there can be little doubt that they are unusually small, and it is certain that in all the great wool producing centres growers, tempted by the high prices now ruling, have rushed their wool into the market much more completely than has in late years been the custom. There is, therefore, every indication of increased consumption ahead, and little prospect of a sufficient increase in the supply to meet the demand.

* * *

GREAT NORTH WESTERN TELEGRAPH CO.

The annual meeting of shareholders of the Great North Western Telegraph Company was held at their head office Toronto on 27th inst.

The annual report presented an encouraging state of affairs, and a still further increase in business is looked for 1906, as the company have expended large sums of money in inreasing their facilities, especially through the erection of new copper and large gauge iron wires. The following directors were elected for the ensuing year: H. P. Dwight, Toronto, president; Adam Brown, Hamilton, vice-president; I. McMichael, Toronto, vice-president and general manager; other directors, Hugh N. Baird, Toronto; Col. R. C. Clowry, New York; James Hedley, Hon. J. K. Kerr, W. C. Matthews, Toronto; J. B. VanEvery, New York. The secretary-treasurer is Geo. D. Perry, and the auditor, A. C. McConnell.

* * *

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ended with Thursday, September 28th, 1905, as compared with those of the previous week:

	Sept. 28.	Sept. 21.
Montreal	$25,065,041	$27,471,155
Toronto	20,591,282	19,852,405
Winnipeg	7,486,264	6,331,454
Halifax	1,668,165	1,771,317
Hamilton	1,327,917	1,722,451
St. John	1,071,610	1,044,530
Vancouver	1,940,329	2,084,005
Victoria	764,597	911,693
Quebec	1,677,898	1,544,492
Ottawa	2,415,230	3,066,259
London	928,153	1,019,833
Total	$64,936,486	$66,919,454

The Plymouth Cordage Company, of Plymouth, Mass., have begun work on their Canadian branch factory at Welland, Ont. The company has been established some fifty years, and makes binder twine, rope and cordage of all descriptions. At Welland they occupy a site comprising 180 acres, and they expect to employ about four hundred hands at the start.

* * *

The Elder-Dempster Steamship Line are endeavoring to arrange for large sales of railway ties in Mexico. Spruce and tamarac suitable for ties are to be found all through the Maritime Provinces and Eastern Quebec, and the approaching winter will doubtless see an immense quantity of them got out for shipment to Mexico with the opening of navigation. The annual consumption of railway ties in Mexico for renewals, apart from the construction of new lines, is said to be considerably over one million per year, and their value is 60 cents gold each. Sir William Mulock, who was recently in Mexico, points out the opportunity presented to Canada by the new direct line to obtain from Mexico sisal, a fibre in great request for binder twine.

SHORTER HOURS ON THE FARM.

A plea for shorter hours for farm hands and for farmers themselves is made in the August issue of Successful Agriculture and Forestry Review, published at Brandon: "One of the objections to working on the farm is the long and irregular hours exacted of hired help in some localities. Farm laborers complain of overwork, particularly on many dairy farms, where the proprietors are obliged to deliver their milk at the station at an early morning hour." And the suggestion is made that if the early morning service could be deducted from that performed in doing the late evening chores the hired man would not complain so much of overwork. His hours now, on many farms, according to our contemporary, are from four in the morning until eight at night. No wonder, therefore, that hired men complain and that it is difficult to get them; no wonder, either that a lifetime of such hours makes a farmer a physical wreck prematurely. The farmer ought not to need to work so much longer than the factory hand.

Let us say, however, that we are by no means carried away by the prevailing cry in the labor world of shorter hours. There are a lot of lazy people calling themselves first-class mechanics, who are being persuaded by still lazier agitators or labor organizers, that what has been already achieved in lessening a day's work from ten hours to nine, and from nine hours to eight, is not enough, but that forty-four hours a week or even forty-two is enough for them to work. This is the argument of the slothful drone, who would not want to work at all if he could "beat" his way, or else of the smart-Aleck with no knowledge of business principles. Neither of these classes of persons reflects that, given two nations, the mechanics in one of which work eight hours per day, and in the other only seven, the nation which works longer, other things being equal, will produce most and will surpass the other in a world's trade. We do not contend that our artisans should work twelve hours out of twenty-four, as used often to be the case in the old days; for the improved conditions enable modern labor to do as much effective work in eight or nine hours as used to be done in twelve. But we object to the arrogant and short-sighted way in which many now-a-days are clamoring for shorter hours and more pay without considering whether a country can afford the one or its manufacturers the other.

Our contemporary continues his argument for shorter hours on the farm thus:—

"While farmers cannot compete with mechanics in the eight-hour day, they can at least restrict a day's work to reasonable limits for men and horses. The fresh horses will perform more work in a ten-hour day in a week and the hired man will do more in a twelve-hour day than if the work is extended to a sixteen-hour day.

"All the great factories, railways and industrial establishments require specified hours' service of their employees to comprise a day's work. In Europe on farms that employ many laborers, regulation hours of service are adopted, and it is the duty of the superintendent to see that the men are at their tasks and rightly employ their time during the working schedule. As our country grows older all defects in the working hours on the farm will be remedied and uniformity of service be generally adjusted to the mutual benefit of the farmer and the hired man."

⁂

BOOK NOTICES.

The Incorporated Accountants' Year Book, issued by the council of the Society of Accountants and Auditors, is just published for 1905-6. We are told that it contains the names of 2,108 members in all. Of these 1,619 are in England and Wales, 123 in Scotland, 29 in Ireland, and 337 in other British possessions and foreign countries. The society has district organizations in eight of the leading towns of the United Kingdom, and, we believe, there are also branch societies of Incorporated Accountants in Scotland, Ireland, Australia, South Africa and Canada. The current volume extends to 573 pages, and contains, in addition to the lists mentioned above, the society's regulations, examination papers, and a catalogue of the library.

A friend has sent us from Europe a specimen of the literature distributed by the Canadian Government at the great fair in Liege, Belgium. It is a 64-page pamphlet, full of information about Canada. What makes the book especially serviceable is the attractive way this information is given. Its facts and figures are not condensed into long, solid dreary pages of small type, but are split up into paragraphs which are illuminated by photographs, and assisted by maps and diagrams. There are extracts from letters, and editorials from persons who have visited the Canadian North-West or are now living in it. And there is a list of the 25 persons who, as commissioners or Government agents (12 of them in the United States), are authorized to give infor-

STERLING BANK HEAD OFFICE: TORONTO.

mation and advice. The book is an eminently sensible immigration document, conceived ingeniously, and carried out well. It does credit to the Department of the Interior. We especially like the little maps of sections of the country surrounding the large towns. These are instructive to Canadians as well as to Europeans or Americans. It is called a "Geography of Canada and Atlas of the North-West," but it is much more.

* * *

ANSWERS TO ENQUIRERS.

R. S., Montreal.—According to a Hand Book compiled by Mr. Littlejohn, the city clerk, the total debt charges for 1904 amounted to $1,002,707; of which $896,888 was for interest on the general debt, the remainder for schools and the public library.

Reader, Windsor, asks the names of the cabinets of the new provinces, Saskatchewan and Alberta. In reply: At Regina on September 12th, the Saskatchewan Cabinet were announced and sworn in as follows: Walter Scott, Premier and Minister of Public Works; J. H. Lamont, Attorney-General; James A. Calder, Minister of Education; W. R. Motherwell, Minister of Agriculture and Provincial Secretary. The Premier of Alberta, Hon. Mr. Rutherford, announced his cabinet on about the same day, as follows: A. C. Rutherford, of Strathcona, Provincial Treasurer and Minister of Education; A. H. Cushing, of Calgary, Minister of Public Works; C. W. Cross, of Edmonton, Attorney-General; W. F. Findlay, of Medicine Hat, Provincial Secretary; and Dr. Geo. Deveber, of Lethbridge.

* * *

NORTH OF ENGLAND LETTER.

One of our daily papers expresses the opinion that Dominion rolling-mills will not be able to supply all the steel rails needed in Canada during the next ten years. They will be able to sell all they can make but not all that will be required. For the surplus a fight is anticipated between English and United States producers, the latter of whom control two-thirds of the steel-making capacity of the world. A divisional engineer of one of our railways informs me that English rail-swagers made a 14 per cent. profit last year. They have an understanding as to prices and appear to arrange affairs quite to their reasonable satisfaction. But the monopolists are more or less of a hindrance. Depending on the rapid wear of rails for their dividends, they are not disposed to adopt any patent system of rail-jointing which might lengthen the life of the rail, as well as obviate the up and down jolt of the train over the joinings. The discouragement of improvements is part of a price usually paid for the maintenance of monopolies.

"Butter-fakers" disturb the peace of provision dealers in this country, and their operations have a two-fold interest for Canadian producers. In the first place the faked article weakens the market for the genuine, and in the second, the butter-fakers provide an outlet for damaged or doubtful qualities. Stale, flavorless and second-rate butter is taken into the factories, dealt with in some mysterious manner, and converted into something surprisingly like good natural butter, at an unnaturally low price. So long as foreign fats are not added the product cannot be branded with the opprobrium attaching to margarine. The Government delays the Butter Bill, which was introduced last session, as some protection for the interests of the genuine article. In view of the swelling indignation of the trade it is hardly likely that the faking will be permitted to go unchecked much longer. Eventually, dealers will have to proclaim the fact by some plain means that the substitute is not all it seems.

Commissioners of more or less corruptness are a perennial business topic; and if one cared to neglect the vast bulk of business, which is transacted honestly between man and man, a very unflattering view of our commercial morality might be presented. The trades in which corruption is most notorious are those in accessories rather than in prime materials. Thus, the business in lubricating oils, in paints, in engineering sundries, printing inks, industrial coals, soaps, and the like is perhaps generally accompanied by some sort of graft. The guilt lies between the salesman and an agent of the buying firm. Until recently little had been heard of the systematic subornation of shop assistants. It appears, however, that one firm selling to drapers has instituted a system of premiums. Coupons are enfolded in each article having a cash value of one farthing to shop assistants only. They are redeemable in lots of one gross or more, and their purpose is to stimulate the sales of this particular article. Even if this system is not a fraud on the shop-keeper it is, at least, a deception of the public, and a most unwholesome piece of competition for rival manufacturers to emulate. The retailer who permits the system to grow up in his own premises, on whatever specious pretext, is growing a very fine rod for his own back.

British farmers—it has long been said—buy retail, sell wholesale and do both badly. The accusation is generally true, and it is rather remarkable that men who manage thus ill should be the ones to back a huge co-operative scheme. It remains to be seen in what numbers farmers will flock to the English Farmers' Produce Association, Limited, which vaulting enterprise is to collect and sell all produce, to provide at wholesale rates all machinery, seeds, and manure—not forgetting stud facilities—as well as drapery, groceries, hardware and other farm house needs. Of course, such an organization could, theoretically, be made to work, but we have not found that co-operative society's officials do much better for customers in the long run than the despised private trader. Our co-operative concerns develop leaks and every reason exists for believing that a successful enterprise will have to begin modestly and grow gradually in the multivariety of its departments.

Speaking of miscellaneous business, what can one think of the cockney witness, who sold "anything between a pin and a bit of green grocery," and declared himself a "sort of general business intactum"?

NORTH COUNTRY.

Manchester, September 15.

had favorable weather and the early planted are all harvested in good condition, but as about 75 per cent. were late will take two weeks yet of favorable weather to secure. A few are threshed and although the quality is fine the yield is not large, 10 to 15 bushels to the acre, so there is promise of not more than about 70 per cent. of last year's yield. And as prices for the new crop are a little lower than last year at opening of season, farmers are not free sellers.

"Corn,—This crop has come on very much better than first expected of it, this was due, of course, to the unusually favorable weather. While much was planted late and little reliance placed on it, yet it is now going to count. The crop will be no bumper one, in fact is estimated much under a good year, but glad to say will get well ripened, something that hasn't happened to the crop for 3 years past, to the great loss of producers and shippers.

"Sugar Beets,—A large area of land is now given up to this crop in Essex, Kent, and Lambton, and due to a favorable season promises exceedingly well. The beets all find their way to Wallaceburg Sugar Company by train loads and boat loads, producers realizing $5 a ton delivered on bank of river, and on board cars at shipping points, with an increase if over normal percentage."

* * *

STOCK TRADING TRANSACTIONS.

The great slump which occurred some two or three years ago in all listed stocks has caused a great many actions concerning stock exchange rules, and the relations of stock brokers with their clients to be brought before the courts, and as this is a branch of law that has hitherto been very rare in our Canadian courts, it is interesting to follow some of these decisions. In nearly all these recent cases recourse has been had by the courts to United States and English judicial decisions, but, no doubt, as Canadian wealth increases stock-broking law will come more and more into prominence, and a useful series of precedents will gradually be acquired in our own courts.

A case recently decided by our Divisional Court in Ontario is of interest for this reason, and, also, because to one who is dealing with brokers it is important to know just what one's rights are as against such brokers. In this particular case a Winnipeg contractor employed a Toronto firm of brokers to purchase 400 shares of Dominion Coal stock for him on a margin of 20 per cent., and he paid the brokers $8,000, the amount of said margin. Subsequently the market price of the stock increased, so that the brokers were able to repay to the contractor his original margin, as well as a further $4,000; eventually the stock began to drop until it reached a much lower level than the price at which it was originally bought, and in June 1905, the brokers sold the stock out at a loss, without notice to their clients of their intention so to do. The brokers subsequently notified their client of this fact and sent him a statement of account showing a large debit balance, after charging up interest accrued and brokerage and crediting dividends. Although requested several times within four months to pay the balance owing, the client paid no attention whatever to the matter until he was finally sued for it. The defence was that the brokers sold without notice and without authority, and that, therefore, they broke their contract of pledge, which entitled the client to damages. The plea of the plaintiff's admitted the sale without notice as wrongful, but denied the right of the defendant to damages, because he had for four months allowed the matter to rest, after being notified of the sale, and contended that he was, therefore, precluded by his own *laches* from recovering. Not only the trial judge but the Divisional Court upheld the plaintiff's right to recover the balance owing, and negatived the defendant's right to any damages whatever.

The grounds of the decision were, that although there had been a technical breach of the contract of pledge, and although a pledgee has no right to dispose of the pledge without notice, yet that damages being awarded by way of compensation and not punishment, he was only entitled to what damage he had actually suffered. That, as a matter of fact, the value of the stock had declined very much further after the sale, so that in reality defendant benefited by the sale rather than lost, and that his right to recover anyway was impaired by his *laches* is not objecting to the sale sooner. The plaintiffs were, of course, therefore, entitled to the full balance of their account.

* * *

BANK OF BRITISH NORTH AMERICA.

It will be more satisfactory, perhaps, to compare the statement of the Bank of British North America, now published, which is for the half year ended with June last, with a similar statement for the first half-year of 1904. The present report shows earnings of $34,023 for the six months, where they were $30,619 in the corresponding period of the preceding. The sum brought forward from the half-year before was practically the same in both, but the larger sum of $9,505 is now carried forward. The allotment of profits to Officers' Widows' and Orphans' Fund is the same this half-year, $513, but that to Officers' Pension Fund is larger. It is noted that since last report a branch has been opened at Hedley, B.C., and that since the end of the half year Belmont and Oak River, Manitoba, have been provided with branches, while a sub-branch is opened on Victoria Avenue in Hamilton.

Notes in circulation are somewhat lessened, standing now at $2,721,830; the paid capital is the same as before, namely, a million sterling, and the reserve now $2,044,000. Among investments, consols are increased to $1,058,889, and the national war loan of $219,000 remains the same. Bank premises in London, and at the branches, are practically unchanged at $885,000. The totals of assets and liabilities in the balance sheet betoken an increased business, the cash and specie in hand, and cash at call or short notice, totalling $11,919,000, as against $11,580,000, while bills receivable and loans total $28,216,000, as compared with $23,853,000. The year has evidently been a prosperous one, for the British Bank, as well as the others doing business in Canada.

* * *

—The Provincial Exhibition of Nova Scotia, held at Halifax, was interfered with by wet weather, which lessened the attendance. There were registered, however, in the eight days, during which it was open, 64,938 persons within the gates. But last year nearly 84,000 persons attended during seven days. An unusual feature of last week, however, was the attendance on the last day of the fair, which was 9,300 persons.

* * *

—We have received a copy of the membership list of the Canadian Manufacturers' Association, made up to August 1905. At that date the Association had 1,839 members in 221 different places. Of these places 15 were in Nova Scotia, 8 in New Brunswick, 2 in Prince Edward Island, 3 in the North-West Territories, 4 in Manitoba, 20 in British Columbia, 35 in Quebec, and 134 in Ontario. The head office of the Association is in Toronto; there are branches in Montreal, Winnipeg, Toronto, Vancouver, Halifax, and Quebec.

* * *

—We learn from a Montreal newspaper that no fewer than sixty-three gamblers were hauled in by the police in the course of a series of raids on Saturday night last. And the sinners were white men, which may have caused the Chinese fantanners to laugh. We are not told whether all the sixty-three were brought before the court, but a telegram of Monday tells us that "twenty-four well-known citizens" were that morning fined $25 apiece as the result of a raid on a gambling house at 11½ McGill College Avenue at an early hour Sunday morning. James Simpson, the proprietor of the faro, roulette, poker outfit, was remanded until a later day for sentence. It would hardly be fair to Montreal to assume that the twenty-four were all "well-known citizens" in the fullest sense. We must suppose this to be a reporter's phrase, such as sometimes credits a silly serving maid or factory girl who runs off with a married man, with being a "society young lady of great beauty."

The Agency of Colonial and Foreign Banks is undertaken and the Acceptances of Customers residing in the Colonies, domiciled in London, retired on terms which will be furnished on application.

OUR BONDS are a legal investment for Trust Funds. If you send us your address we shall be pleased to send you a copy of the Order-in-Council under which Trustees are authorized to invest Trust Moneys therein. They are also accepted by the Government as the deposits of Insurance Companies, Banks, etc.

THEY are secured by more than Twenty-four Million Dollars of Assets. . . They bear interest at FOUR PER CENT., payable semi-annually. We issue them in sums of One Hundred Dollars and upwards. A specimen will be sent you on application; also a copy of our last Annual Report.

Write for them.

CANADA PERMANENT MORTGAGE CORPORATION,

Toronto St. TORONTO

DO YOU KNOW

That we have received a large number of enquiries from investors residing in all parts of Canada, asking us to send them our booklet entitled "An Investment of Safety and Profit," which tells you all the facts about a desirable investment in our . . . .

5% Debentures.

It's a fact, and the shrewd investor is taking advantage of this opportunity of securing this Debenture before the limited issue is exhausted. . . .

Mercantile Summary

The census of Stellarton, a mining town near New Glasgow, N.S., just completed, shows a total population of 3,051. This has practically doubled in a very few years.

In Exeter, Ont., on Saturday last, a by-law to authorize the council to buy out the electric light plant, not to exceed $18,000, was voted on and defeated by eight majority.

C. G. David, boot and shoe retailer in Montreal, is reported to be seeking a compromise arrangement at the rate of 25 cents on the dollar, and is said to show a deficiency of some $5,000.

It has been stated by Mr. Rust, city engineer of Toronto, that the Lehigh Portland Cement Company, of New York, will establish at Belleville the largest cement plant in Ontario, with a capacity of 2,500 barrels a day.

A new freight shed is to be built at Vancouver for the C.P.R., the contract having been awarded to W. Hipham, of Vancouver. Its length will be 576 feet; width, 30 feet.

From Montreal we learn of the assignment, on demand, of D. H. Renoldson, a jobbing grocer of some years' standing, his failure being attributed to an undue leniency in extending liberal credit accommodation to weak city retailers, among whom his business was almost altogether done. A failure of some ten or twelve years ago was attributed to the same cause. His liabilities are reported at about $42,000.

Late country failures in Quebec Province are reported to us as follows: A. Lechasseur, a jeweller at Levis, has assigned. He has been in business since 1899, and is said to have made occasional speculations in stocks, with unfavorable results.—Joseph Couture, of North Stukely, is a shoemaker by trade, and several years ago his father assisted him to lay in a moderate stock of dry goods and ready-made shoes. The venture has not panned out well, and his affairs are now in the hands of the assignee.—Damase Labonte, general dealer at Chartierville, near Compton, Que., is making a proposition to pay his creditors 35 per cent. of their claims, which amount to $6,600. He came here in the fall of 1903 from Ste. Claire, where he had previously been associated with another party in business unsuccessfully.—An assignment has been made by J. B. Trepanier, grocer, in Hull, who began business in July, 1904, after some years' experience as a clerk. The liabilities are light, just about $1,000.—D. Coulombe, general storekeeper, Villeroy, near Montreal, previously reported insolvent, has effected a settlement at 25 cents.—A cheese manufacturer at West Bolton, Magloire Fleurant by name, is insolvent, his small liabilities being mainly local.—Garneau Freres, carriage makers, St. Apollinaire, have been asked to assign. They are said to owe $2,600, and show assets of $1,200.

Mercantile Summary.

A demand to assign has been made upon Joseph Lesperance, a Montreal manufacturer of furniture, whose affairs have shown signs of financial strain for several years past. It is not many years since he was induced to run for municipal honors, and this did not help him in his business. He is estimated to owe about $20,000.—J. A. Lamoureux, a retailer in the same line, who began business only last summer in the St. Henri suburbs of the city, has already assigned.

In the matter of the proposal to instal water and sewerage plants in Fredericton, N.B., experts have gone into the question in detail, and come to the conclusion that the sewerage problem is easier of solution than was at first proposed. The cost for a complete system of sewerage covering the town is estimated at $88,000. For the water system, the adoption of the mechanical filtration plan is proposed. It is believed the cost would be about $60,000 and the annual maintenance expense $2,000.

A despatch of Monday last from Cleveland, Ohio, gives a resumé of the fourth annual report of the American Locomotive Company to be submitted at the annual meeting of stockholders in New York, October 17th. This shows that gross earnings for the fiscal year ending June 30th, 1905, were $24,150,201, a decrease of $8,918,549 from those of the previous year. The report will make plain that expenses were $19,796,533, a decrease of $7,608,451 from those of the year 1903-4. Net earnings will be $4,353,667, a decrease of $1,310,097. Against the income was charged $1,883,556 representing the cost of the Montreal works. The decrease in earnings is attributed to general depression in business throughout the country from the fall of 1903 to the fall of 1904.

A peculiar story comes from Windsor, Ont. About seventy years ago, it appears, Joseph Demister, one of the big lumber dealers of his day, started a raft of white oak logs down the Lindsay river so late in the season that it was caught in the ice in Lake Scugog and sunk, because of not being properly buoyed up by lighter timber. For some reason the raft was never located. N. W. Trimble, a grandson of Demister, who until recently resided at Elmstead, spent nearly a year in a quiet hunt for the raft, which lies under thirty feet of water, and imbedded in the mud. About a month ago he was successful in locating it. He says it contains several thousand sticks of white oak, cut and squared. Each stick contains 160 cubic feet, worth at the present one dollar per cubic foot. There are probably one million dollars' worth of timber in the raft. Mr. Trimble says he will remove to the locality of Lake Scugog, where he intends to remain until the work is completed. He will use barges with tackle and hoisting engines to pull out the logs.

A Change in the Trusteeship.

Whether of a Will, Marriage Settlement or Bond Issue, is a troublesome and expensive matter.

Where private trustees are appointed such changes are inevitable.

The Trusts Company alone enjoys continuity of tenure, fixity of residence and permanent records.

Mercantile Summary.

We understand that the Nova Scotia Steel Company has purchased some large submarine ore areas to the north of Wabana, though the deposits in the latter place are far from being worked out.

Mr. J. M. Pattullo, of Tacoma, Wash., proposes to erect a box-making and lumber plant at Vancouver at a cost of $30,000. The business is to be carried on under the name of the Pacific Box Company.

A. L. Garland & Company's dry goods stock at St. Thomas, Ont., was damaged by fire to the extent of $5,000, and that of Dowler Bros. to about the same amount. Both firms were insured.

The North-West Colonization Company, St. Paul, Minn., has purchased some 200,000 acres of land in Manitoba, Saskatchewan and Alberta, of which 130,000 acres comprise C.P.R. lands in Saltcoats district.

At a sale of school lands at Kallaley, Sask., recently the remarkable average price was obtained of $14 per acre. Two quarter sections were purchased by the Grand Trunk Pacific at $26.25 per acre, and one was sold for as high as $55 per acre.

The Canadian Pacific Railway, it is reported from Montreal, has given an order to its Angus workshops in that city for over $3,000,0000 worth of rolling stock. It will comprise twenty-five parlor, sleeping and dining cars, ninety passenger coaches and 3,000 freight, cattle and refrigerator cars. The company has already twenty-five locomotives under construction at its Montreal shops.

It is announced by the chairman of the National Transcontinental Railway Commission that coal has been discovered in the Lake Abitibi region. So far there has been no opportunity to test the quality of the deposits and learn their extent, but should the coal prove to be a genuine article and exist in workable quantities, it will no doubt prove of enormous advantage to the Grand Trunk Pacific, and possibly to the Provinces of Ontario and Quebec as well.

F. X. Depatie, doing a business in Montreal as a jobber of tobacco and fancy goods under the name of A. Depatie, his late father, who formerly carried on the business, lately assigned, and is now reported to have arranged a settlement at 40 cents on the dollar. His liabilities are stated at $11,066, relatives and connections figuring as creditors for a considerable amount.—Remi Legault, who last spring bought a small business of a similar character in the western suburbs of Montreal, has already consented to assign at the request of one of his creditors. He is a stone-cutter by trade, and for a short time carried on a small restaurant business before engaging in his present line.

Mercantile Summary.

The St. Clair River Oil Co. has, it is reported, struck an oil well at Mersea, near Leamington, at a depth of 1,077 feet, flowing at the rate of 500 barrels per day.

It is stated, apparently on good authority, that the Grand Trunk Pacific Railroad will build a direct line from Winnipeg to Portage la Prairie instead of using the Canadian Northern line between those points.

The Rat Portage Lumber Company's planing mill at Norman Mill, near Kenora, was last week destroyed by fire, together with some $3,000 worth of lumber. The loss is estimated at $28,000, covered by insurance.

On Tuesday of last week there was a disastrous fire at Cayley, near Calgary, Alta. Henry's general store and a large proportion of the other buildings of the town were destroyed, including the telegraph office. Henry's loss is partially covered by insurance.

R. C. Sproule, R. A. Grant and others, of Toronto, are the names mentioned in the Canada Gazette as having obtained a charter, under the title of the Canada Lands Improvement Company, to acquire lands in various parts of the Dominion for colonization purposes. It would also advance money and otherwise assist settlers.

The Glasgow shipbuilders have had a good season. A report from that centre says that in the past month they have added thirty vessels of 62,042 tons to the previous total, making the eight months' total 205 vessels of 344,026 tons, figures which have been exceeded only once in the history of the industry—in 1901. As to launches, the thirty with their total of 62,042 tons, compare with sixteen vessels of 22,124 tons the previous month, and twenty-five of 32,151 tons in August, 1904. Over 42,000 tons of new orders were placed with the Clyde builders in the past month.

The High Commissioner in South Africa has cabled to the Canadian authorities that about 500 horses will be required for the South Africa Constabulary between now and February, and he invites tenders under the following conditions. They are to be landed at Durban; inspection and selection of horses to be made by representative of South Africa Constabulary not later than fifteen days after disembarkation; South Africa Constabulary to have full power of rejecting all or any of the consignment on any of the following grounds: unsoundness, unsuitability for work, want of condition, faulty conformation; size, 14.2 to 15.1 hands; five to seven years of age. Must be geldings or mares, the latter to be given preference. Horses should be stout, thick-set, but with quality, and should be about three-quarters thoroughbred. There is said to be a good market for horses in South Africa at present.

The Monterde's Electric Accumulator Company, Limited, Montreal, has received a charter from the Dominion Government. It will purchase the F. Monterde electrical patents and manufacture and deal in accumulators, motors, dynamos and other electrical machinery. The company's capital stock is placed at $250,000.

La Société Parisienne d'Installations Artistiques, Limited, is the name of a new company, with headquarters at Montreal and a capital stock of $100,000, which proposes to build all kinds of private and public residences, and manufacture and instal all sorts of decorations and furniture; also to make and deal in ecclesiastical garments and emblems, etc. D. Raymond and C. H. Branchaud, Montreal, are among the charter members.

The special commissioner of "Commercial Intelligence," our enterprising London contemporary, which is making a special investigation into industrial conditions in Canada, speaks thus of the Nova Scotia Steel Company's plant at Sydney Mines: "Frequent visits to steel plants in Pennsylvania and Ohio have got me into the way of looking in a newly-installed plant for anything in equipment that is novel or represents progress in iron and steel plant practice. The day I spent on the Sydney Mines plant was not without its satisfaction in this respect. There was something new in bye-product coke-oven practice, and also an equipment that was new to me for handling pigs in the cast-house; this equipment had recently been imported from Whitehaven, Cumberland. . . . It will be seen there is an obvious saving of labor over the older methods of drawing coke-ovens. The newer method gets rid of much hot, laborious and brutalizing manual labor, and is thus in line with so much of the mechanical improvement in iron and steel plant practice of the last ten or twelve years. . . . The plant embodies everything that is new up to 1905 and that has stood the test of modern practice."

OUR POLICY

A successful merchant extends to his customers every courtesy and personal attention.

The same policy, combined with conservative management, contributes to the success of financial concerns.

REPORT OF THE DIRECTORS
OF THE
Bank of British North America
TO THE PROPRIETORS

The Court of Directors submits the accompanying Balance Sheet to the 30th June last.

The profits for the Half-year, including £6,590. 9s. 7d. brought forward from last account, amount to £40,613. 18s. 0d., out of which the Directors have now to report the declaration of an Interim Dividend of 30s. per Share, payable, free of Income Tax, on the 6th October next, being at the rate of 6 per cent. per annum, leaving a balance of £9,605. 0s. 5d. to be carried forward.

The Dividend Warrants will be remitted to the Proprietors on the 5th Oct. next.

The following appropriations from the Profit and Loss Account have been made for the benefit of the staff, viz.:

To the Officers' Widows' and Orphans' Fund	£513. 14s. 0d.
To the Officers' Pension Fund	£595. 3s. 7d.

Since the last report a Branch has been opened at Hedley, British Columbia.

And since the end of the half-year Branches have been opened at Belmont, Man.; Oak River, Man.; and a Sub-Branch at Hamilton, Ont., Victoria Avenue.

London, 5th Sept., 1905.

NOTE.—The latest monthly Return received from Dawson is that of the 31st May, 1905, and the figures of that Return are introduced into this Account. The balance of the transactions for June with that Branch has been carried to a suspense account, pending the receipt of the June accounts.

We have examined the above Balance Sheet with the books in London, and the Certified Returns from the Branches, and find it to present a true statement of the Bank's affairs.

WHY HE COULD NOT PAY.

A local barrister has received the following letter from a customer of a big wholesale house that placed an account in his hands for collection:

"My Dear Sir,—Absence from the city prevented me writing an answer to yours of recent date.

"It will be utterly impossible for me to settle the claim you mention at present, for the very simple but good reason—I haven't got it.

"I have simply been initiated into the Lodge of Sorrow, Hard Luck Chapter, Fool Division No. 69.

"My picture, hanging crape-laden in the Hall of Fame, bears the legend, "Sucker No. 33876234.

"My motto is, briefly, 'I would if I could; but I haven't; so I can't.'

"Fortune may smile, but up to the present time it has given me the laugh. I have hopes. Sincerely."—London Free Press.

⁂

THE TOBACCO INDUSTRY.

During the past twenty years, says the Deutsche Tabak Zeitung, the cultivation of tobacco in Germany has suffered a notable decrease. In 1884 there were in that country 187,582 planters, who cultivated 52,116 acres, and produced 104,042,631 pounds. In 1894 the census showed only 151,261 planters. The area cultivated was 43,427 acres, with a production of 84,474,645 pounds. In 1903 the number of farmers fell to 105,991, the acreage to 40,899, and the pounds to 72,910,750. The number of planters has then decreased by 81,591, and the production by 31,131,881 pounds in nineteen years—from 1884 to 1903. The consumption of tobacco, on the other hand, has been on a constant increase. From 151,488,258 pounds in 1881, it has risen to 201,784,449 pounds in 1903.

⁂

TORONTO MARKETS.

Toronto, Sept. 28, 1905.

Chemicals, Drugs, etc.—No new feature comes up this week for comment in connection with the local drug trade. Quinine and opium remain steady, and the situation is much as before. Prices for other lines are without appreciable change.

Dry Goods.—All staple articles continue very strong in price. Woolen goods are particularly firm in sympathy with the results of the London wool sales, and with reports from the textile centres of Europe and elsewhere. The demand is beginning in earnest for such heavier goods as flannels, flannelettes, etc. Travellers on the road report prospects for a good fall and winter trade as quite bright.

Flour and Grain.—The general quoted price for ninety per cent. patents for export is $3, in buyers' bags. The movement is now about average. Manitoba flour is hardly yet on a fixed basis. Ontario wheat is firm, not so much having come forward as was anticipated. There is a good movement in Manitoba wheat, and values are slightly easier, in sympathy with Chicago conditions. There is a good demand for oats, and it is firmer. Rye and barley are also firm. Shorts is in very brisk demand. Oatmeal and rolled oats are about the same as last quoted.

Fruits and Vegetables.—The receipts of fruits are falling off now with the advancing season. Peaches, however, still continue in abundance, and the quality of those offered would seem to have improved. Tomatoes are a little firmer, owing to early frosts. Lemons still continue very scarce.

Hardware.—The hardware trade is experiencing a brisk movement, and all lines of seasonable goods are in demand. Fencing is in request, and so are guns and ammunition. Interest is being manifested in skates. Builders' hardware is also wanted to a somewhat more than normal extent. In metals no very appreciable changes have taken place. Pig iron remains much as before, with a normal movement.

Hides, Skins and Leather.—While prices retain their dearness, the situation in hides has become a little easier, owing to heavier receipts. Leather is very strong in sympathy with hides, and stocks are said to be on the light side in some grades, which may still further strengthen the situation.

Live Stock.—Probably if the quality of the cattle offered at the market last week had been better there would have been a rise in prices. As it was, the demand was brisker, owing to the scantier offerings, but prices remained unchanged, though firm. Few export cattle were offered, and they were poor stock. The demand for good butchers' was quite good, but they were scarce.

Provisions.—All lines of provisions range high in price. Prices for butter are about the same, but the decrease in offerings has given the market a firmer tone. Cheese is unchanged locally from last week's firm prices, but at outside points it is said to be a little easier. Eggs are in heavy supply, but prices remain good. Poultry is plentiful, but prices are fairly good at 10c. for live spring chickens and 14c. for dressed. New crop hops have hardly started to move yet, but considerable interest is manifested in the prospects. Some English hops are said to have already arrived here, and sold at 19c. The crop there and on the Continent is described as good.

Seeds.—The market for seeds has been active and prices good. In fact, the prices have gone almost too high for an export basis, and a certain dullness has set in for the moment. Alsike is quoted at $4 to $6 per bushel; red clover is $5.25 to $6.

Wool.—Not much change has taken place in the local wool market, the new

clip now being mostly in. Prices are steady in keeping with the advances, ranging from 7½ to 10 per cent. at the London wool sales.

* * *

MONTREAL MARKETS.

Montreal, 27th Sept., 1905.

Ashes.—Business has been quite slack of late, but owing to the paucity of supplies values fairly maintain their firmness, and first quality of pots would bring $5.25 to $5.27½. Pearls are wanted, and would probably bring $8. There are hardly more than ten barrels of potash in store here.

Dairy Products.—The export movement in cheese last week was of a much more active character than during the fortnight preceding, shipments aggregating 87,609 boxes, which are fair average figures, and the total exports to date are 1,431,994 boxes, as against 1,410,772 boxes at this date a year ago. The Liverpool cable of yesterday showed an advance of 6d., and fine Ontario makes are fairly firm at 11¼ to 11⅜c., and Quebecs at 11 to 11⅛c. Exports of butter last week were 31,920 packages, making a total for the season to date of 460,465 packages, being about 92,000 packages ahead of the figures a year ago. Values are rather firmer, with fair enquiry, both locally and for export. We quote finest creamery at 22½ to 22¾c.; good to choice, 21½ to 22c.; dairy, 18½ to 19c. per pound.

Dry Goods.—While the volume of city retail trade is a little better than a week ago, it is still far from as active as it should be at this season, but a few days of cool weather will likely help to remedy this by stimulating fall goods. In the country travellers are doing well, and some very fair-sized personal selections have been made during the week by visiting buyers. In the cotton market there is nothing specially new, but a general stiffening appears in all lines of woolens, including carpets.

Groceries.—The outside markets for raw sugars continue to rule on the weak side, but there has been no further revision of local prices for refined, standard granulated being quoted at $4.70, in barrels, at which figure refiners report pretty steady buying; yellows range from $4.20 to $4.60. Molasses is steady at 32c. for Barbados, in round lots, and 35c. the single puncheon. There has recently been more demand for Japan teas, which tend to firmness, and Ceylons and Indians are also in better request. The first direct dried fruit steamer has cleared from Denia for this port, and the "Jacona" is timed to leave Patras to-morrow to fill up her cargo at Messina, Cadiz, Denia, Malaga and other Mediterranean ports. There have been rumors of a 2s. advance in Valencia raisins, but this is unconfirmed. There is some easiness in the currant market in Greece, owing to the conditions called for by the recent legislations not being in full running order, and importers are being urged to place orders at present figures. Sultanas are reported low at primary points, good quality being quoted at 13s. New Tarragona almonds are offered at 7¾c., New York, and filberts at 5¼c., New York.

Hides.—Offerings of beef hides continue small, being lighter than usual at this time of the year, and for No. 1 dealers readily pay 11½ to 12c. per pound. Lambskins will be advanced next week to probably 90c.

Metals and Hardware.—In these lines of merchandise the demand is good. Pig iron is firm at advance of last week, and bars are dearer at $1.80 to $1.82½ in an ordinary way. Boiler plate is expected to advance shortly, and probably some other lines. Iron pipe is firm at $4.10 for inch. Canada plates are quoted at $2.35; black sheets, 28 gauge, $2.15; galvanized sheets, $4.15; tinplates of standard weight and brand, $3.65 to $3.75 for cokes, and $3.90 to $4 for charcoals; Ternes, $6.50 to $6.75. Lead, which showed some temporary weakening, is again firm at $3.75 to $3.80; copper, 17¼c.; ingot tin has recovered some of the late easing off, and is steady at 35½ to 36c.; spelter, $6.75; antimony, 14½ to 15c. per pound.

DELAYS ARE DANGEROUS.

The Accident and Sickness Policies

are by far the BEST, CHEAPEST and MOST COMPREHENSIVE in the market.

Full Information Freely Given.

A. G. C. DINNICK, Managing Director.

Oils and Paints.—Fall business is good. Some small supplies of window glass are coming forward, but not sufficient to replenish depleted stocks adequately, and quotations are very firm at $3.75 per 100 feet, first break, for Belgian, and $4 for English. Turpentine is quoted at 91c. per gal., in single barrels. Linseed oil has shown considerable weakness, prices being to some extent demoralized, and sales are reported at 45 to 46c. for raw, and 47 to 48c. for boiled. Fish oils are dull at last week's prices. Pure white lead quotes at $5.25, and bulk putty at $1.40.

Wool.—The London sales closed today with an established advance of from 5 to 12½ per cent. on the various grades. Spot business continues of a slow character, orders to importers evidencing careful buying. Ordinary Capes are quoted at 17½ to 18½c.; B.A. scoured is very firm, 45c. being asked for fine; North-West, 19½ to 21c.; domestic fleece, about 28½c.; domestic pulled, 30 to 31c. There is no Australian here.

* * *

The Grand Trunk Railway Company has made several important changes in its operating department. Mr. F. H. McGuigan, the popular manager of transportation, maintenance and construction, will retire in favor of Mr. W. G. Brownlee, of Toronto, and will thus have an opportunity to lighten his labors and confine himself to the executive responsibilities in connection with his position of fourth vice-president. The position of superintendent of the middle division, vacated by Mr. Brownlee, will be filled by Mr. W. E. Gillen.

UNITED STATES FINANCIAL CONDITIONS.

Henry Clewes & Co., New York, in their weekly circular, dated September 23, 1905, said:

Additional engagements early in the week of gold for import into this country exerted a distinctly favorable influence on stock exchange speculation. While rates seem to be strengthening daily, there has thus far been no evidence of an acute situation in money; and the fact that the movement of currency to the agricultural sections through the Sub-Treasury has been much below that of last week has served to allay the fears recently entertained in this direction. The increased confidence has shown itself, however, more particularly in the operations of the big pools, the general public still failing to participate in a large way in the market. Similar tactics have been pursued by the pools for stimulating prices to those noted a month or so ago, namely, the marking up in a spectacular way of the high-priced investment stocks, such, for instance, as Great Northern preferred, Northern Pacific, St. Paul and that class of securities generally. The gold import movement at this time is a natural one, and represents merely a mechanical payment for our exports of cotton and other products and our manufactures; it may hardly be said, in a broad sense, to change the general situation so far as foreign monetary interest in this market is concerned. The local money situation has for some time been receiving the benefit of large foreign credits, which have been supplied in anticipation of approaching shipments of breadstuffs and other products; and it seems fair to assume that the shipments of actual gold will mean the withdrawal of some of these credits before they become automatically eliminated by grain and cotton bills. While the Bank of England did not increase its minimum discount rate, there are many evidences of a disposition on the part of foreign banking interests as a whole to handicap the gold movement to this side; this, in turn, means that local money rates must be correspondingly advanced to make gold shipments profitable. Viewing the money situation in a broad light, it is certainly too early to regard the danger point as having passed. The very fact that such general prosperity exists throughout the country means in itself that money is and will be in active and general demand; and that there has been a noticeable strengthening in the commercial paper market during the week is a significant feature in this connection.

Good investments—securities of reputation—are scarce. It seems a quite safe assertion that the big operators and the pools—and not the general public—are the chief holders of at least what may be termed floating securities at the present time, and that the scarcity of high-class investments is by them being utilized to advance such investments and at the same time to create a general feeling of enthusiasm in the market. Enthusiasm once started, however, becomes deaf to calm reasoning; and should present holders be successful in inducing a general buying movement—to them an unloading movement—many of the conditions for a still higher market would soon be present.

SEALED PROPOSALS

Issue of $50,000 Municipal Bonds

The Council of the Corporation of the District of South Vancouver Municipality invite offers for an issue of 50,000 dollars worth of Bonds for the purpose of opening up, making and completing certain roads within the District, all of which are specified in detail in the By-law and amount roughly to about 31 miles.

The said Bonds are payable on or before 50 years from the 21st day of October, 1905, and are to bear interest at a rate not exceeding five per cent. per annum. The interest thereon to be payable at the Canadian Bank of Commerce in Vancouver on the 21st day of April and the 21st day of October in each and every year.

The Municipality has one other loan of 35,000 dollars issued on the first day of August, 1893, payable in 35 years from date of issue, off which loan we have now $12,011.84 paid into a Sinking Fund Account.

The last revised assessment roll shows the land values to be $1,389,180.00 exclusive of improvements. The improvements being $411,260.00. The loan is secured on land value only. Improvements are not taxes. There are about 60 miles of roads already opened.

The total revenue of the Municipality this year is $17,415.40. The current tax of 10 mills on improved land and 20 mills on wild lands, bringing in a gross revenue of $14,535.70 off which $2,103.00 was allowed for rebate. The special rate of 2 mills for Loan No. 1, bringing in $2,779.70.

The arrears of taxes standing due on August 1st, were $1,003.75 and $2 270,73 still due for 1905.

The Municipality is adjacent to the City of Vancouver. The whole of the southern boundary of the city being the North boundary of the District, the remainder of the Northern, Westerly and Southerly boundaries, having a sea frontage of about 7 miles on the Straits of Georgia, nearly the whole of which is still Crown Land. The South boundary being the North arm of the Fraser River, the Eastern boundaries being Hastings townsite and Burnaby Municipality.

Some 4,000 acres is still held by the Pruvincial Government and this is included on the security for the loan. This land when opened up will be the most valuable part of the District.

The C.P.R. own 4,446 acres in the Municipality, none of which has up to the present been offered for sale. A block of about 800 acres is now being surveyed, which will add materially to the assessed value of the District.

The total area is about 17,000 acres in the Municipality.

The loan is secured by an annual payment of $443.25 into a Sinking Fund Account, which together with the interest is to be collected by a special rate, sufficient therefore annually on the rateable land value.

There are 2,524 holdings held by 960 persons.

The District is traversed by the B. C. Electric Railway in three directions, by the Vancouver and Westminster line, by the Lulu Island line and the cemetery extension.

The Municipality is rapidly improving, over 190 changes being recorded this year—most of the new owners intend to become residents.

Sealed proposals will be received until 2 o'clock, on Saturday, Oct. 14th, addressed to

W. G. WALKER,
C. M. C. Mt. Pleasant P.O.,
Vancouver.

The Municipality reserves the right to reject any or all bids.

NEWS FROM THE TEXTILE CENTRES.

A report from Boston, Mass., in the Wool and Cotton Reporter says that woolen business in that centre has been mostly of a retail character during the past week; but while the sales have been individually small, there have been many of them, so that, taken collectively, the aggregate is of fairly good size. Quite a variety of mills have been represented in the market, although the demand is still chiefly from the worsted consumers, but one house reports that it has sold more wool to clothing mills than it has to worsted mills. The former are without doubt more interested in wool than they were, but it is believed that some of them have been holding off, pending the opening of the London wool auctions. The demand is still principally for territorial wools, grading from a three-eighths blood up, half blood being in especially good request, but good fine and fine medium wools, if suitable for worsted purposes, sell very well. While the business has consisted mostly of sales of moderate size, or, say, 50,000 to 100,000 pound lots, a few transactions of good size have been put through.

At the London wool sales on Tuesday last the offerings amounted to 10,207 bales, including a good selection of fine grades. All sections bought freely. Superior, light crossbreds slipes were taken by the home trade. Americans bought greasies at extreme rates, several lots bringing 1s. 2d. A large supply of superior scoureds was in active request for Germany.

The marked improvement in the style and make of Jap quilted goods that has gone on for some years shows a further step in the new season's goods, says a London Drapers' Record report, largely because a proportion of these goods are now regularly made in this country. In these latter more conventional modes of trimming than are employed on the Japan-made articles makes them more attractive in the eyes of many English women. Silk appli-

Head Offices—Queen City Chambers, Toronto
SCOTT & WALMSLEY,
ESTABLISHED 1858.
Managers and Underwriters.

cations, chiffon, and collars, cuffs, and strappings of fancy silk all contribute, while buttons of the most Occidental appearance supply the ornamentation on a few numbers. The same sleeves rule in dressing jackets as in gowns, and the Jap goods are no exception, the time when the sleeves were always a year behind the other gowns being long past. An excellent number, standing out from "the ruck" of Jap gowns, at a moderate price, is one that displays stole ends effects in self silk, bordered with cream.

THE.... [Incorporated 1875]
Mercantile Fire
INSURANCE COMPANY
All Policies Guaranteed by the LONDON AND LANCASHIRE FIRE INSURANCE COMPANY OF LIVERPOOL.

61 to 65 Adelaide Street East, TORONTO.

—Exports of Canadian cheese, which, for two or three weeks, showed a disappointing falling off, have come up again, as last week's figures show. The week's shipments from Montreal were 86,609 boxes, making the total since opening of navigation 1,431,994 boxes, which compares very well with the 1,410,772 boxes of last year to same date. Butter shows a total export amounting to 460,465 packages, which is more than 90,000 packages ahead of the figures of 1904 to like date. The week's shipments were 31,920 packages.

It is stated that the Eastport (Maine) sardine packers, both syndicate and independent, have decided to close all factories for the season on November 1st. The packers have also agreed that no sardines shall be sold for less than $2 a case for oils. This action was brought about by the present unsatisfactory condition of the market, which resulted directly from the eagerness of the firms engaged in the business to unload their product, the outcome being a badly congested condition of affairs, and a consequent shrinkage in the price of the goods. The pack in 1904 was large, and so far this season a considerable quantity of goods has been put up—enough, it is said, to supply the demand for the year. With five weeks more in which to do business, the possibilities of a big pack are very good, as fish are plentiful, and likely to continue so, and the factories are running night and day with full crews.

⁂

—We observed last week the following item among those telegraphed from London, Ont., to the daily press: "September 22nd.—When a London fire insurance agent opened his morning mail a week or two since he found therein a cheque for $5,000. Accompanying this cheque was a letter from a well-known merchant, stating that he had found his loss by fire to be trifling, and he, in consequence, returned the full amount of the cheque handed him by the fire insurance company to cover the loss sustained. When he had recovered from the shock, the agent communicated the particulars to his head office. This week he received a reply, to be handed to the merchant, conveying the thanks of the company, and enclosing a cheque for $1,500 as a token of appreciation of an altogether unprecedented act." Our first impression was that this must be a canard. Upon making enquiry, however, we find that the circumstance is true — the transaction actually happened; the matter was one of smoke damage, and we have been furnished with the name of the merchant. It is a pleasant thing to chronicle. But we take exception to the last sentence in the press telegram, describing the merchant's action as an unprecedented act. There are plenty of instances of a like kind in the experience of insurance offices. After all, the action of the London merchant was an act of plain honesty—and one ought not to call plain honesty "unprecedented."

⁂

—Bad news comes from Norfolk county. It would appear that incendiarism is rife in the neighborhood of Port Rowan. A merchant of that place recently prosecuted two men for theft, but did not succeed in convicting them. They were acquitted; and in a week afterward his store was burned. An insurance company sends a man to investigate the risk, who reports appearances of incendiarism. Ten days afterward word reaches Toronto by telegram of another merchant's store being burned, not at Port Rowan, but at a place in the same county, close by. It seems that a gang is terrorizing the neighborhood, and the authorities are being applied to for an investigation. The incendiary is one of the very worst types of men, a particularly odious malefactor. The mean passion of revenge is so plainly indicated in acts like those above described that it would be well to have the guilty persons punished with the greatest rigor.

WHO HOLDS THE CONTROL ?

In all Stock Companies the stockholders retain the full control, even where policyholders have been allowed "a voice" in the direction of affairs; but in a purely Mutual Company such as

The Mutual Life Assurance Co. OF CANADA.

the Policyholders alone elect the Board of Directors, who appoint all the Officers and, therefore, Mutual Policyholders, through the Board, control and perpetuate the efficient management of its affairs.

"Continuity of Management" is desirable only when exercised in the best interests of policyholders.

SEVEN TO ONE

That is about the ratio. About seven times as many persons are injured as die from all causes yearly.

Accidents are a more prolific cause of death than any disease except lung diseases.

Twice as many people are accidently killed as die of old age.

Does it not seem reasonable to you as a business man that it would be to your interest to carry an accident policy?

GRIFFIN & WOODLAND
MANAGERS.

Coy Bros. & Southcott's hardware store at St. Catharines was on Tuesday last destroyed by fire at a loss of between $3,000 and $4,000. On the same day the Rathbun Company's lumber yard at Gravenhurst, Ont., was burned with about 7,000,000 feet of lumber and two dwelling houses.

The Sun Life of Canada had a triumphant year. Impossible to give the increases in this space—suffice it to say that never has the Company's motto "Prosperous and Progressive" been so magnificently maintained. Ask for leaflet giving the Record of 1904.

THE METROPOLITAN LIFE INSURANCE CO.

(INCORPORATED BY THE STATE OF NEW YORK.)

The Company OF the People, BY the People, FOR the People.

ASSETS, $128,094,315.24

Proof of Public Confidence

This Company has more premium-paying business in force in the United States than any other Company, and for each of the last 11 Years has had more New Insurance accepted and issued in America than any other Company.

The Number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec and Ottawa.

Significant Facts

This Company's Policy-claims paid in 1904 averaged in number one for each minute and a quarter of each business day of 8 hours each, and, in amount, $102.54 a minute the year through.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1904.

391	per day in number of Claims Paid.
6,561	per day in number of Policies Issued.
$1,426,700.50	per day in New Insurance Written.
$114,060.67	per day in Payments to Policy-holders and addition to Reserve
$73,326.8	per day in Increase of Assets.

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave. New York City.

Amount of Canadian Securities deposited with the Dominion Government for the protection of Policy-holders in Canada, over $2,600 000.00

The Imperial Life Assurance Co. of Canada.

Head Office---Toronto.

1—Its Motto: "First and paramount, absolute security to policyholders."

2—Its Strength: Unquestioned. Annually inspected by the Dominion Government. A larger Government deposit than any other Canadian life company.

3—Its Record: Without parallel in the history of Canadian life assurance:

Dec. 31	Income.	Reserves.	Assets.	Insurance in Force.
1898	$167,411	$ 180,761	$ 677,062	$ 4,169,125
1900	294,852	597,488	1,102,092	9,226,350
1902	481,229	1,102,531	1,660,777	13,384,119
1904	696,885	1,768,706	2,404,941	17,672,050

4—Its Aim: Absolute satisfaction to every policyholder.

A Canadian Company.

FEDERAL INSOLVENCY LEGISLATION.

Although it is more than two years since any attempt to enact Federal Insolvency Legislation has been made, the necessity for such an addition to our jurisprudence is constantly being evidenced, only too often in a way that causes decided hardship to creditors. These recurrent instances should at least direct the attention of the federal authorities to the inadequacy of our present laws concerning debtors, or move some influential body of interested parties, as for example the Canadian Manufacturers' Association, to take up this defect seriously and persuade Parliament to remedy it. Although it would be necessary for such a body to arm itself carefully beforehand with copious examples of the inadequacy of our present laws in this respect, yet not until the matter is taken up in this way is any effective remedy likely to be forthcoming.

A most glaring instance of injustice to a creditor was brought to our notice the other day. In this case the creditor is a manufacturer in Ontario, and the debtor a dealer in New Brunswick. The customer purchased a bill of goods amounting to about $90, and a draft was made upon him at the usual three months' time and accepted, maturing at say the 24th of May. This was returned for non-payment without explanation, but during the interval, on April 15th, another bill of goods of about $30 was purchased by telegram by the customer and shipped to him, a draft for the amount having been drawn and accepted, the same maturing on July 18th. The usual precaution of obtaining mercantile reports of the customer was resorted to, and they set out that the business was owned by one individual doing business in a company's name; that the estimated value of his plant was $20,000, with insurance of $16,000, covering which was a bill of sale amounting to $4,500, giving preference to a deceased partner who had been assisting the owner in business in the capacity of financial manager. The owner's son also assisted the father in the business and they were both favorably spoken of and thought to be making some progress; they had besides a reputation of meeting payments at maturity, and were regarded as responsible for ordinary trade wants.

Subsequent to this, not having received any reply to their communications to the customer when the drafts were dishonored, the Ontario house placed the matter in a solicitor's hands and he reported the customer judgment proof, and that it would be throwing good money after bad to try to collect the bill. This was followed in July by a notice that the New Brunswick concern had suspended payment, and in August by a request from the son for goods from the same house to the value of about $40. On the creditor refusing to ship the goods without first receiving the money, the son replied that he had "never before been asked by any house he had dealt with to pay for goods in advance, and he declined to do business in that way."

In the meantime, although they had actually suspended payment, this retail firm continued to do business as usual, apparently using the creditors' money and refusing to divide up their assets amongst them. The subsequent condition of affairs may be gathered from the following solicitor's report:—"The debtor's liabilities at the present time are in the vicinity of $14,000, including the bill of sale for $4,500 on stock and plant, while his assets which consist largely of plant and machinery, are estimated at $20,000; but if sold would realize only a very small amount as there is no demand for such machinery here. Debtors are only doing a small business, and are hampered greatly by competition, but they hope, however, to be able to arrange a compromise with their creditors in the near future. I do not know that anything can be gained by pressing to judgment at the present time as under our Creditors Relief Act, priority amongst execution creditors is abolished and your clients, therefore, cannot in any way be prejudiced by delay."

It is needless to say that the creditor was greatly incensed at the fact that he had incurred this loss, and there apparently was no way of forcing the debtor to make an assignment. In considering this part of the example there are two points worthy of notice.

In the first place the creditor was apparently misled by the mercantile reports obtained, because if they had been accurate they would in the first instance have given the full information subsequently obtained from the solicitor. This, however, was not of so much importance to the creditor as the fact that when he found out the true condition of affairs he could not realize his claim by forcing the debtor into insolvency, and this is a second and most important point to notice.

In England, in addition to the ordinary voluntary insolvency laws, which are really a part of the Common Law of the land, there is a Bankruptcy Act under which a creditor can force an insolvent debtor to make an assignment whether he wants to or not, provided the debtor comes under one of the numerous definitions of an insolvent contained in the Act. Thus, for instance, if the demand is made on the debtor for payment, and payment is refused for a period, say of 60 days, this constitutes an act of insolvency, and so on.

In Canada, however, there is no general insolvency or bankruptcy act pertaining to all the Provinces alike, which measure can only be passed by the Dominion Parliament, as under our British North America Act it has exclusive jurisdiction over bankruptcy and insolvency. There is, therefore, no such thing as compulsory insolvency in Canada. In a number of the Provinces, however, special Acts of Parliament are in existence, which are in reality modifications of the English Common Law in reference to voluntary assignments, and they pertain to voluntary assignments alone. Although these would appear to encroach on the authority of the Federal Government, yet in reality they do not so encroach, as has been decided by the Privy Council in England, because they do not pertain to compulsory bankruptcy as in England.

The result is that in Canada a man may continue to do business, utilizing what money he can realize out of his business and keep his creditors waiting for their money, practically as long as he likes. True, they may obtain judgment against him, and may even apply for a receiver of all his property, but this latter is a very difficult remedy to obtain under the laws of most of our Provinces, which remedy is only granted by way of equitable execution, as it is presumed that the ordinary legal mode of issuing execution ought to be sufficient to enable a creditor to obtain satisfaction. Furthermore, under our Creditors Relief Act even if one creditor pursues his claim to judgment and execution, and the debtor makes a subsequent voluntary assignment, all the creditors are enabled to come in within 30 days thereafter and share equally with the first creditor without bearing his share of the cost.

Thus it is almost impossible to obtain satisfaction from a debtor who makes up his mind to act unfairly; and furthermore, if all the remedies we have were pursued, the expense is so great as to make it almost prohibitive. It is, therefore, evident that this condition of affairs should not be allowed to continue any longer, for not only are our Canadian manufacturers and wholesalers suffering, just as in the instance we have cited above, but the general trade of our country with the Motherland and with foreign countries is being hampered for the same reason, namely, because of the inability of exporters to make sure of getting their money from their customers. In view of this condition of affairs it surely behooves some influential body in Canada to lay this crying need for an amendment to our law before the Federal Government, if that body does not of its own accord recognize the existence of the evil.

* * *

THE PROFESSION OF ACCOUNTANCY.

The third annual meeting of the Dominion Association of Chartered Accountants, held in Toronto this week, was the occasion of recalling to many the stages through which the profession of accountancy in the Dominion has passed during a quarter century. It may be said at once that Canada is greatly indebted to Montreal for establishing and maintaining a very high standard of professional practice in accountancy. As long ago as 1879 the leading accountants of that city, James Court, James Riddell, P. S. Ross, and others, held a series of meetings to consider the formation of an association which should elevate the practice to the character of a profession, and confine it to persons who would practise it as such, who were properly qualified, and whose personal characters would command the respect of the general public. The result was the granting, on 24th July, 1880, of a charter giving the applicants and subsequent members the right to the title of Chartered Accountants in the Province of Quebec. This body has maintained its organization ever since, and, as we have said, keeps up its reputation for the respectability of its members and the high character of its work.

It was in 1883, if we remember rightly, that the Ontario Institute of Chartered Accountants was incorporated by the Legislature of that province; and since then, associations of the kind have been founded and incorporated in Nova Scotia in 1900, in Manitoba in 1902, and in British Columbia in 1905. New Brunswick, too, is proposing now to found one. The founding and growth of these, as well as of the older institution, was the outcome of a steady extension of commerce which made the need of expert accountancy evident to the merchant, the banker, the manufacturer. The larger and more complicated the business, the wider its scope, the greater the need for able supervision or skilful unravelling of tangles when a firm became embarrassed, or when a dissolution was pending, or when a death occurred. As Mr. John Hyde put it (one of the presidents of the Montreal association), at the congress of accountants held in St. Louis last year:—

> The members of these associations are "professional advisers." Many of their clients come to them as they go to a doctor or a lawyer when ills or difficulties face them; and provision should be made by which what may be disclosed, or should be disclosed, should be considered as sacred as if stated either to a medical man or to one of the legal fraternity. The Legislatures may not be prepared to fall in with this at the present, but the fact remains, and the practice, it is held, has yet to come to the advantage of all concerned. Others, chiefly incorporated companies, make use of them [accountants] on the principle that the Chinese employ their doctors (pay them while they are kept in health), and employ the members of the association and others to keep a supervision over their book-keeping and funds. This has been found eminently satisfactory, and the practice continues to grow.

The Ontario body has thriven apace, having now something like a hundred members in full standing, with a students' society of at least half as many. And it has done good work for the greatly increased number of clients who for twenty years have given its members their business. On the whole, Canada has good reason to be proud of her position in accountancy when it is remembered that the United States are not so forward, their oldest kindred association being born only fifteen years ago. And Canadian associations have established cordial relations with the Society of Accountants and Auditors in the Old Country, names of Canadians occurring in the list of both its members and associates. To recur to the body whose annual meeting was held this week, the Dominion Association of Chartered Accountants, this is not a provincial body, but one incorporated at Ottawa, with membership scattered over various provinces.

An interesting gathering of accountants and other professional men from near and far celebrated by a dinner, some ten nights ago, the twenty-fifth anniversary of the founding of the Montreal Association of Chartered Accountants. On this occasion reference was made by the president, Mr. J. W. Ross, to the steady growth of the profession of accountancy in the newest British colonies. Mr. A. L. Dickinson, president of the American Federation of Chartered Accountants, gave the history of the progress of the profession in the United States, while Mr. A. F. C. Ross, representing the Old Country association, in extending the compliments of that body remarked that by a happy coincidence the day on which the guests were gathered was the seventy-fifth anniversary of the founding of the elder body. In very earnest terms the retiring president of the Dominion Association, Mr. W. H. Cross, of Toronto, proposed the toast of the Montreal Association, the oldest on this continent. He recalled its dignified attitude and the elevation of its aims. Contrasting former days with the present, the speaker referred to the lavishness of credit which used to prevail, and to the great improvement of late in the terms of purchase between merchants.

Every thoughtful person who is old enough to remember the days of thirty or forty years ago; the enormous bills that were sold, and the absurd length of credit that was given in the wholesale trade; the profusion with which retailers used to part with what was on their shelves without either money or money's worth; the easy-going character of commercial bargains generally; must recall vividly (and with a pang if he were then a merchant) the loss and waste that used to go on arising from loose methods of not only selling but collecting. A great improvement has been effected in the intervening years in commercial circles. But there is great necessity still for system and economy. Not only does the individual but the nation need both to study and to practise economy in view of the sudden growth that is come upon Canada, and the responsibilities she has of late assumed. And in inculcating such economy and such system, accountants of good character and tried ability can render excellent service.

* * *

—Here are some of the late appointments made of agents in Eastern Canada for the German-American Fire of New York: Mr. Shortt, Halifax; Mr. C. V. Wetmore, Sydney; and Messrs. W. P. King and Company, Truro, in Nova Scotia; Messrs. T. B. and H. B. Robinson at St. John, N.B., and Messrs. Hyndmann & Company at Charlottetown, P.E.I.

OUR NEW CANADIANS.

A visitor to the West seeing the great influx of new settlers on the road to building up the Canada of the future, inevitably finds himself engaged in making guesses or computing statistics as to their respective nationalities. He finds Canadians from the central and far-eastern provinces; Americans from Iowa, Illinois, Washington, Oklahoma, and indeed nearly every state in the Union; Englishmen and Scotchmen; and a miscellaneous medley of Swedes, Germans, Icelanders, Galicians, and Doukhobors. But the most striking feature of all is the number from the neighboring Republic, and it is interesting to try and gauge the real opinion as to these which is held by our brethren rooted in the West, that is to say, regarding Americans as compared with settlers from the Old Country and elsewhere. A visitor to our far-western domain, who is of candid mind, and does not allow himself to be carried away by ultra-imperialistic sentiment, is bound to confess that these American farmers are the very best element now migrating into Canada. As a rule they have been good citizens in the localities they have left, and in the view of practical men in the West who know its requirements, they will make fine citizens in their new home.

This as to their general characteristics as men. But in addition to that, they have had previous experience in the West of North America, they know how to go about building up a new country, they know how to tackle its inevitably hard problems, and even if they did not, they are adaptable, and would soon learn how; moreover, having sold out their old farms to good advantage, they have money with which to make a satisfactory new start. All this means they are producers from the beginning; the country feels their beneficial energy immediately.

The same can hardly be said of the new arrival from the Old Country, though the Scotchman is almost universally preferred to other Europeans as being quicker to fall into the ways of his new abode. Many of the Englishmen one sees are bright, strong, honest fellows, who are quite determined to "see the thing through" in the dogged English way. But, as a rule, they have neither the money nor the knowledge which would fit them to take a leading part in the development of a new section. One particular feature meets the eye of the above-supposed candid visitor, and that is that the average Briton has not the "grip" on the country that the average American has. The Englishmen, even one of the better class, comes out in the hope that the country will make him; the American with a full determination to make the country. This essential divergence of character means a great deal in any estimate of their respective values as builders of a new land.

Among the very best of the new settlers are those who come to the West from Ontario and other parts of old Canada. These, many of them, have the same attributes that render the people from the United States such valuable assets in the making of the West. But even they—the truth must be old—are looked at a little askance by the experienced Westerner. In the first place, those coming with money enough to begin right are not very plentiful, and even those who do come are hard to please. Of course, there are hundreds of exceptions, but quite a common fancy held in the West is that while an American may come and see the country, and will almost immediately decide to throw in his lot with it, the average Ontarian will beat about the bush and allow half a dozen good chances to slip through his fingers while he is engaged "thinking it over." Meanwhile the pick of the land is falling into the voracious hands of the Americans. In fact, the typical Westerner is apt to look upon a man from Ontario, much as Canadians as a body look on a newly arrived Englishman. This applies more especially to the attitude of people in the Far West. In Manitoba and the older sections there is many a prosperous homestead owned by an old Ontario boy, serving to show that the old spirit of pioneering is by no means monopolized by our cousins to the south.

* * *

LIFE ASSURANCE COMPANIES EXAMINED.

The evidence given during recent days before the Legislative Committee of New York which is investigating American life insurance companies is of an interesting character. Some of it illustrates in marked degree the one-man-power exercised by prominent officials of large companies. For example, the president of the New York Life, John A. McCall, declared that in 1896 and 1900, and 1904, contributions to the Republican party's campaign fund were made out of the company's treasury. And that gentleman thanked God that he had done so, upon his sole responsibility, his object being to defeat "free silver" during the candidature of Mr. Bryan. But Mr. Theo. M. Banta, cashier of the company, the comptroller and the auditor swore that, so far as they knew, in 1896, no moneys were, directly or indirectly, paid by the company to the Republican campaign fund during the then recent presidential election. What are plain people to think of such a contradiction? And what of the management of a company in which so large a sum as $48,000 appears to have been paid out without the knowledge of these important officers.

Then with regard to the Equitable Life, Mr. Jacob H. Schiff, head of the banking house of Kuhn, Loeb & Co., a member of the finance committee of that society, declared that the entire committee was at the mercy of one man. "It was all Hyde," he said, "and the directors were figure-heads." And he questioned the accuracy of the minutes of a certain meeting at which he was present, for he had never heard of a certain transaction said to have been carried through at the meeting in question.

Again, it was brought out in the testimony of Mr. Edward Devlin, real estate manager of the New York Life, that the building in Paris, owned by that company, was carried on the books at a valuation of $1,102,604, whereas with the original cost and improvements, $2,533,104 had been paid for it. The net income returned to the company amounted to only 1½ per cent. on the actual sum invested, although the income was put down at over 3 per cent. on the amount at which it was carried on the books.

The evidence given by Mr. Perkins, Mr. McCall, and others as to the dealings of these big companies with syndicates in the handling of securities to enormous amounts, indicates an amount of freedom in the use of moneys belonging to policyholders, and a free-and-easy way of making purchases of or advances upon real estate, that tends to shake confidence in their administration. The dealings of the New York Life with "Judge" Hamilton, for instance, where hundreds of thousands were advanced by the president to him, ostensibly for real estate purchases, but apparently in part for defeating legislation, are a further illustration of one-man-power which needs to be curbed.

It is curious, too, that at the sitting of October 4th, Mr. McCall, president of the New York Life Company, while explaining in detail the "general legislative work" of Judge Hamilton, and of counsel employed by him, denied any knowledge of the legislative pool referred to in the testimony of Alfred W. Maine, auditor of the Equitable Life Assurance Society, in the previous week, to which in 1896 the three big companies contributed. He asserted, however, that three-quarters of all the evils affecting life insurance companies are in the nature of blackmail. This is an extraordinary commentary upon the state of law and legal administration in various states of the Union, where, it would seem, commercial companies and financial or other associations are regarded as fair game for the tax-gatherer.

Truly, the life assurance situation in the United States is one which affords aspects of no very pleasing kind. Sensible people have not been greatly alarmed during past months by the self-advertising vaporings of a man like Thomas W. Lawson, who has been abusing or suspecting everybody and everything as parts of a gigantic joint-stock combine on the part of certain iniquitous bodily or shadowy personages. But what is coming out as to the management of insurance funds in New York is enough, and more than enough, to make sane and sober people wish for smaller concerns, with modest managers and less smart, spread-eagle methods, and with more of old-fashioned respect for duty and less of self-seeking in their directors.

* * *

"SMART" LIFE ASSURANCE.

In our issue of August 4th last, we took exception to the style and methods of a new life insurance company which was being largely advertised by a Mr. Ostrom, and we referred to certain peculiar features of the company in the following words:—

> We do not know the exact nature of the special T. Marshall Ostrom copyrighted policies, which are such a feature of this up-to-date company, and which give it such "superior advantages over all other." The Government, however, has a more or less stereotyped form for the charters it now grants life insurance companies. Has this one succeeded in obtaining extra privileges, or are these peculiar features nothing more than other companies already possess under an ordinary name? Or, if Mr. Ostrom is empowered to make use of his unique facility for inventing new contracts, are those contracts of any value, not, of course, from his own point of view, but from that of people who are plucky enough to dash in and sign them?

Further information, and the developments of the past few weeks show that our questions were well warranted. In another part of the same article we wondered what credentials Mr. Ostrom could present indicating his ability or willingness to carry out the somewhat large promises of his advertising, but when a man attempts to dispose of a thing twice over it is certainly a reflection on both. Yet this, if we may judge from certain documents now on record in Osgoode Hall, is exactly what the redoubtable Mr. Ostrom has done, and he has done it in connection with these same wonderful copyright policies of which so much capital has been made in the advertisements. Moreover, it transpires that these patent features, the "extra privileges" referred to in the above excerpt from our previous article, have never been actually accepted by the Insurance Department. We were not far wrong, therefore, in casting doubt on their value to the insuring public.

But to return to the action-at-law. It seems that some time ago Mr. Ostrom disposed of a one-quarter interest in six of these copyright policies to a Mr. George Stevenson, of Toronto. The latter in his turn assigned the quarter-interest to Mr. Ewen Mackenzie. Mr. Mackenzie is now taking action against T. Marshall Ostrom, and the Monarch Life Assurance Company to set aside the alleged sale by Ostrom to the Monarch Life Assurance Company of plaintiff's undivided one-quarter interest in the interim copyrights, for the Dominion of Canada, for six certain forms of insurance plans known as the Gold Bond, Six-Year Bond, Eleven Premium Six-Year Bond, Mutual Benefit Bond, the Life Optional Endowment Insurance Policy, and Ostrom's House Endowment Policy, and for the copyrights subsequently secured, and for an injunction restraining the defendant Monarch Life Assurance Company, its officers, servants, and agents, from advertising an exclusive interest in said copyrights, or in the alternative for the sum of $5,000 for the plaintiff's said undivided one-quarter interest in said interim copyrights and copyrights.

We repeat that investors who are asked to put their money into such schemes as these ought to know what they are doing. Such cases as this at Osgoode Hall should do much to enlighten them.

* * *

EXCESSIVE USE OF WATER AT FIRES.

"Observer," Montreal, thinks we should speak once more about the useless waste that comes from the frequent hasty unreflecting deluging of premises with water by fire brigades in case of fire. He says: "I remember what you wrote in The Monetary Times about the Eby-Blain fire, a year ago, and the shameful destruction and loss caused by *useless* pouring in of water till the whole stock was ruined. You were right, too, for I was there and saw the thing, and very sick it made me to see such waste." Referring again to the subject, it has given us satisfaction to see that the chief of the Toronto fire brigade (in speaking to a newspaper reporter about the September fire on the Esplanade, where Capt. Worrell was killed by the fall of material inside the building) recognizes that firemen have a duty in saving property from damage by water. Chief Thompson was referring to the dangerous nature of a fireman's occupation, and to the necessity that sometimes lies upon every member of a brigade to fight fire at close range, and added, "Our business is to save lives and property, and to save property from damage by water as well as by fire." Has the chief only now learned that part of a fireman's business is to save property from damage by water? If not, why did he not take that view of his duty in August, 1904, when such enormous waste was caused by water at the Eby-Blain Co.'s fire? If any one reminds us that he was lame at that time from an injury, and only able to hobble about Scott Street at the fire, our reply is that it was the lameness of his judgment which mattered on that occasion, not the lameness of his legs.

ONTARIO MINING LAWS.

Much interest is being taken in various parts of Ontario in the condition of the mining laws, and various suggestions have been made as to their alteration. It is the expressed intention of the Provincial Government, however, before making any changes in the mining laws to give the mining men of the Province a chance to express themselves. Meetings will be held in the different mining centres for that purpose, and later a convention for the whole Province is intended to be held. The places of meeting selected for these meetings are: Kingston, Madoc, Haileybury, Sudbury, Sault Ste. Marie, Port Arthur, Kenora and Fort Frances. At these meetings delegates are to be appointed to the convention, which will discuss the various resolutions offered by the local meetings. The convention will likely take place in Toronto about the middle of November. When the Ontario Legislature meets again, the revision of the mining laws will come up in due course.

* * *

THAT QUEBEC TAX.

The tax of three hundred dollars imposed by the Quebec Legislature on commercial travellers from outside the Province selling goods within it has provoked much ill-feeling and strong opposition from both Canadian and British merchants, and no wonder. But the treasurer of that Province declines to do away with it, contending that the principle is right and the tax within his competency. And—he needs the money. The Government at Ottawa have not yet pronounced upon this tax, but have decided not to interfere with the British Columbia statute imposing a tax of $50 on commercial travellers who enter the Province from places outside, which is just such another measure. That decision was reached by the Cabinet after having had before them the report of the Minister of Justice, declaring that the statute was constitutionally one which it was competent for the Provincial Government to enact.

* * *

IN THE OLD COUNTRY.

With the Canadian Manufacturers' Association.

One cannot but remark the extent to which advertising is carried in the Old Country. Not only do the omnibusses and brakes in London blaze outside with patent medicine and other advertisements, but the railway stations as well. It is almost universal to find every large station and many smaller ones covered inside, and the railway stone or brick walls along the track for a long distance outside, with "Beecham's Pills," "Bovril," and "Reckitt's Blue." In the North, both in Scotland and Yorkshire, it seemed quite as bad. Melrose's Teas seemed to divide attention with Hudson's Soap along the fences of stations. An ingenious Scotchman adopted a plan of declaring himself "WALTER WILSON, THE LARGEST GROCER in the Kingdom," in great letters, and then in small along the brick walls. A scheme adopted by a patent medicine proprietor resembles one which will be recalled by those who travelled much in south-western Ontario thirty years ago as having been employed by P. Jamieson, the clothier. This is to place, not in or upon any railway property, but *in the fields* near railway stations, and visible from the cars, signboards four or five feet long bearing: As an example, we saw hundreds with this legend:

When these are erected every quarter mile along the great trunk lines it will be seen what enormous expense is involved to the advertiser.

So much does this fashion of thus plastering the walls of stations with advertisements obscure the sign bearing the name of the station itself that it gave rise to a joke by a member of the C.M.A. Association in July. "Say, Joe," asked one man of another in passing a place where a lovely old ivy-covered ruin looked down upon us; "say, Joe, what station was that we just came through?" To which Joe replied: "I could not make out—there was too much wall-decoration. Seems to me most of these stations are named Bovril." I find in my note-book appropriately just here a memo of "picturesque station and lovely country at Ambergate, Derby." But then all Derby, we are told, is pretty—a claim that has been made in our hearing by residents of various counties, from Devon to West Lothian. Assuredly the rocks and rivers are not here desecrated by patent medicine or other brutal signs to the extent which prevails in the United States, and even Canada.

Before I leave off speaking of the British railways, however, it is proper to remark the extraordinary care they take of a passenger and all that belongs to him. The porters, numerous to a degree unknown in Canada, are both careful and informed. A traveller is made to feel that the porter is his guide and humble friend, who knows the platform, the train, the time, the exact kind of seat suited to his customer, the situation of the luggage van, the location of a not crowded smoking compartment—and all this information he imparts for threepence, unless a silly American or Canadian goes to the extravagance of sixpence or a shilling as a recompense. One is instructed as to his destination by the train attendant, who takes pains to see that his ticket and his train correspond. And one is made to feel that the railway people take a continuous interest in his comfort as well as his safety.

Another thing: the solidity of everything about the railway, from road-bed to track-walls, from locomotive to brake-van. The double tracks everywhere give one a sense of security that prevents his being frightened at the swiftness with which he travels. Fifty miles an hour is common speed, sixty and seventy not unusual, but the grades are low and tunnels frequent, unpleasantly so. The extent of premises and tracks of the great lines in large cities is immense, and the amount of traffic handled must be enormous, as, indeed, the published annual figures show. At the same time, the number of men employed seems needlessly large: porters swarm about at the big stations (18s., rising to £2 10s. a week, is all the railway pays them, apart from what they get from passengers); and, while I will not say that I ever saw seven men pushing one truck of baggage, as I once did on the Intercolonial, I have often seen three. So with the track-hands. In the Southwestern station at Glasgow I counted twelve men taking up one old rail and replacing it with a new, where in the States or Canada four or six would have been thought enough. Astonished at the extent of Paddington Station when passing it on a 'bus, I asked my companion, an American living in London, what was done with such huge premises. "They preserve clerks in 'em," he answered; "lazy sticks, too. Many of the inside staff don't know how to do a day's work, and there are twice too many of them; money is going to waste."

The quickness in handling trains in the Old Country is to be accounted for by the double tracks, which exist everywhere, and by the extent of yard room and number of carriages maintained. Economies might be effected in these directions, however. Such occasions as a bank holiday in England or the Glasgow Fair in south Scotland make great demands on the resources of railways, which have to handle crowds, as, indeed, do the week-end cheap trips, on which occasions middle class or poor folk travel for less than a cent per mile. Travelling by rail first class is expensive, but third class cheap and comfortable. From London to Glasgow, a distance of 408 miles, it costs 32s. 6d. third, and a return ticket can be had for thirty per cent. more, making the price, say, $10 for 800 miles. From Liverpool to London first class costs 29s., while third class it is only 15s. 6d., less than four hours' fast run. Some of the roads, the Midland, for example, have given up second class carriages altogether, while the Great Western sticks to all three classes. The modern third class carriages are a great improvement over the old.

J. H.

CURRENCY REFORM IN THE UNITED STATES.

Mr. L. M. Shaw, Secretary of the United States Treasury, made a speech the other day before the Ohio Bankers' Association upon that favorite subject of his, the perfection, or at least the goodness of the American currency system. In fact, as we believe we remember his having done in the past, he styled it the best currency system in the world. At the same time, which is a peculiar fact in such a nearly perfect thing, he sees in it the "vital defect" of a lack of elasticity. And he hazards the prediction that there will be no reform in this direction until there shall have been experienced another panic, worse, perhaps, than that of 1894. It seems strange that with a practical people like the Americans, the discovery of such a palpable defect does not lead to a remedying thereof. Yet it continues unabated. Mr. Shaw suggests several remedies, chief among which is the creation of additional bank circulation. But, as he stated, there does not appear to be any great likelihood of strong measures being taken in the near future. One may be allowed to remark upon the apparent inconsistency of the existence of such a most "perfect system in the world" with that of vital defects, which in a moment of very possible panic may plunge the whole commercial fabric of the country into comparative ruin.

GRAND TRUNK RAILWAY.

There was a general meeting of the shareholders of the Grand Trunk Railway Company in London on Tuesday last. The report of the directors shows that the gross receipts for the half year ended June 30th were £2,729,007, as compared with £2,559,316 in the corresponding period of last year. The net traffic receipts were £805,570, compared with £663,747. With additions from other sources, the net revenue is brought up to £907,633. Deducting interest on debenture stocks and bonds, there remains a surplus of £285,033, which is increased by the amount brought forward to £291,652, from which the directors recommend the dividends already announced, leaving £7,423 to be carried forward. The passengers carried were 4,303,765 for the half year, an increase of 345,051. The Grand Trunk western gross receipts for the half year amounted to £512,995, against £506,147 in 1904. The working expenses were £429,438, against £432,874, leaving a net profit amounting to £83,557, against £73,273. The net revenue balance at the 30th of June amounts to £3,433, which will admit of the payment of 1 per cent. on the second mortgage income bonds. The Detroit and Grand Haven gross receipts for the half year were £134,771, against £117,746 in 1904. The working expenses were £107,980, against £100,078 last year, leaving a balance of £26,791, as against £17,668 in 1900. The net revenue charges were £37,206, against £37,051 in 1904, so there was a net revenue deficiency of £10,415, as compared with £19,383 in the corresponding period of 1904.

C. P. R. ANNUAL MEETING.

The twenty-fourth annual meeting of the Canadian Pacific Railway shareholders took place in Montreal on the 4th inst., Sir Wm. Van Horne presiding. The stockholders were asked to authorize the expenditure of $7,500,000 for cars and locomotives. The annual report, submitted by Sir Thos. Shaughnessy, showed a strong and healthy position on the part of the company. Gross revenue from traffic had exceeded $50,000,000 and this large sum even would be doubtless exceeded in the current year. The president claimed that, as a result of the expenditures made during the last three or four years for the elimination of curvatures, reduction of gradients and general improvements, the C. P. R. between Montreal and the Pacific Coast was in the front rank of trans-continental roads. A resolution was submitted and adopted approving the construction of the Wolseley-Reston line and authorizing the issue and sale of the requisite four per cent. consolidated debenture stock for the purpose. The line will serve a large district that is being rapidly settled, and it is necessary to build a branch line from a point in the vicinity of Wolseley, on the main line, to Reston, on the Souris branch, a distance of 122 miles.

Hon. J. K. Ward introduced the matter of the Nicola-Kamloops & Similkameen Railway Company, who are constructing a railway from Spence's Bridge, on the main line in British Columbia, to the coal fields in Nicola valley, a distance of forty-five miles. It is intended that this line shall be gradually extended through the Similkameen valley and eventually to a connection with the Columbia & Western section at Midway. A resolution was approved authorizing the lease by the company of the section now under construction at a rental equal to the interest at four per cent. per annum on the bonds of that company, issued with the consent of the company, to an amount not exceeding $30,000 per mile.

A resolution authorizing the issue of the necessary securities to meet the expense of building additional steamships for the Atlantic service was passed, as also a motion to authorize the lease of the Esquimalt and Nanaimo Railway. The directors were given authority to build another bridge between the C. P. R. terminus at Carleton and the city of St. John, N.B., unless better arrangements can be made.

The final business at the meeting was the election of four directors whose four years of office had expired. By unanimous vote Messrs. Chas. R. Hosmer, David McNicoll, R. G. Reid and Hon. Robert Mackay, the retiring directors, were re-elected for another term.

* * *

TO STOP CREDIT.

The burden of the recent Retail Merchants' convention was, without a question, the evils of the credit system. Like every other important subject, it has more sides than one, and it is no doubt difficult to remedy promptly. We would suggest, however, that if this fall's harvest yields the abundance conditions indicate now, the merchants collect their accounts as soon as possible, and give the farmers to understand that it will be necessary for them to keep more funds on hand hereafter between harvest seasons, owing to the decision to put credit under control. When the Western farmers receive their returns for the year's crop, they feel speculative, like any others who have good supplies of cash, and if they find the retailer easy, so to speak, they will naturally delay paying their bills, if they see good chances of investing in more lands. It is, therefore, up to the merchant this fall to get brave, and assert his rights. Let the farmer content himself with his present acreage until he can see his way clear to increase it without working a hardship on his friend, the storekeeper. If all merchants have confidence in each other, and all pull together in the matter, dealing with the credit system will be fairly easy, and the carrying out of the proposed reforms will be to the advantage of the farmer, in the end, as well as to the interest of the business man. Let the initiative be taken this year!—The Commercial (Winnipeg).

* * *

INSURANCE ITEMS.

We have found unusual interest in perusing the Union Mutual Bulletin for October 2nd, published by the Union Mutual Life Insurance Company, of Portland, Maine. The new business of this sound old company for September was one-third greater than for the same month of 1904. Perhaps what has helped to occasion this is the fact that after 30th Sept., so the paper states, no forms of insurance in any way providing for Tontine or deferred dividends will be written by that company—a resolve for which it may well be applauded. The Bulletin goes on to speak, and this is of especial interest at the present time, of the "still-continuing investigation of the methods of management of some of the largest [life] institutions, which seems to be inclining the public to look with broadening favor to the less conspicuous, but equally strong and more easily comprehended, smaller companies. Irrelevant newspaper writing, coupled with extravagant and reckless headlines, is, however, having a more or less damaging influence in special localities, creating indiscriminate feelings of distrust with regard to many institutions that are engaged in the business of insuring lives, without reference to whether or not such an attitude has any basis of reason back of it."

The members of the Royal Arcanum, both east and west, refuse to believe in the inevitable. That is to say, they combat the idea that the increased rates recently decided upon by the Supreme Council, and reported by Supreme Regent Howard C. Wiggins at the August meeting at Put-in-Bay, Lake Erie, are necessary, although Mr. Wiggins declared them to be based on deep research. One man, John Walsh, of New York, says the new rates mean the destruction of the order. At a meeting in Detroit last Friday of Michigan members of the Royal Arcanum it was decided to raise $75,000 to fight in the courts the sliding scale of rates recently adopted by the society. And on the preceding night, at Boston, some two hundred delegates, representing the Massachusetts councils of the Royal Arcanum voted to take legal measures to prevent the Executive Committee of the Supreme Council from enforcing the new rates of assessment. Petitions were filed with the Attorney-General and the Insurance Commissioner, protesting against the new rates, and asking the assistance of the Attorney-General in court proceedings. "Subordinate councils were recommended to remain loyal to the order, but to protect their rights by recourse to the laws of the State."

* * *

—Numerous dailies in various Canadian cities have within the week been giving particulars, more or less decided, as to a "deal" between the Bank of Montreal and the Bank of New Brunswick of the nature of a merger of the latter with the former. That these were all premature appears from the statement of a director of the St. John institution on Tuesday that there is no proposition to sell or buy. He declared that absolutely nothing of that kind is before the directors, and nothing to submit to the stockholders. Our St. John letter elsewhere in to-day's issue deals with the matter.

* * *

—An interesting record is that of the voyage of the steamer "Stork" in that great inland Canadian sea, Hudson's Bay. This steamer arrived at the West India docks in London on Wednesday last with a cargo consisting of some £50,000 worth of furs for the Hudson's Bay Company. She started from Charlton Island, in Hudson's Bay, on September 19, 1904. A succession of gales was accompanied by pack ice, but after many escapes the "Stork" was driven back to Charlton Island, where the crew subsisted for nearly ten months on the food they hunted, principally wild rabbits. The average temperature was 22 degrees below zero, but sometimes it went down to 40 degrees. The crew, to vary the monotony, made a banjo out of a tin, and danced to its music. While picking her way out of the ice the "Stork" encountered the ship "Discovery," which, though herself icebound for five weeks, shared her provisions with the "Stork's" crew. Such a lengthened adventure as this does not seem to accord with those who insist that the navigation of Hudson's Bay and transatlantic commerce therewith is an easy matter.

—By an unfortunate error of the printer, our remarks upon the Bank of British North America Report, page 410, last issue, were marred through dollar marks instead of pound sterling marks being used in the first paragraph.

—A despatch from Winnipeg to the Globe says that Regina is to have a sugar refinery. The British Columbia Sugar Refinery Company intend erecting a plant at that place. Tenders were closed on Tuesday morning, and it is proposed to have the plant in operation before January 1st. "Tenders call for a plant larger than anything in the West, barring British Columbia property."

—That Winnipeg and the western cities are not the only ones in Canada which are growing satisfactorily is proven by the number and value of the building permits which have been issued in Toronto during this year. Already they represent a value of $7,945,787, an increase over the same period of last year of $3,382,296, or in the nine months up to date, a value equal to the whole of last year. Last month alone, no less than 261 buildings were approved by the city architect, with a value of $877,005, compared with $546,275 in September, 1904. So far this year about 2,424 buildings have been erected.

—At a meeting of the Institute of Bank Clerks in Minneapolis the other day, Mr. A. B. Stickney, of the Chicago Great Western Railway, spoke in praise of the English banking system, which, he said, "is better than ours [the United States], as there one dollar's worth of gold supports three times as much credit as it does here. Further, the greater elasticity of the English method of raising the rate of discount in times of panic gives the necessary elasticity which tides commerce over all crises. The blundering methods of the American Government in its efforts to maintain a proper reserve have resulted in enormous losses for the taxpayer."

—Ninety-one, perhaps one hundred and ninety-one, prominent business men of St. John are mysteriously missing, or were, at half-past three yesterday afternoon. For, whereas one hundred, or two hundred of these business men were expected at the Board of Trade rooms to hear Mr. J. S. Larke, Canada's commercial representative in Australia, discourse upon the development of our trade with the Commonwealth, the number of gentlemen actually in attendance was nine. There is much talk here from time to time about pushing trade, but it seems there are only nine men willing to sit still and listen to an outsider talk on that subject, even though his knowledge is official and he is armed with important facts concerning openings for new business.—St. John Telegraph.

⁂

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ended with Thursday, October 5th, 1905, as compared with those of the previous week:

	Oct. 5.	Sept. 28.
Montreal	$30,130,530	$25,065,041
Toronto	24,337,256	20,591,282
Winnipeg	8,850,664	7,486,264
Halifax	1,820,312	1,668,165
Hamilton	1,584,759	1,327,917
St. John	1,073,947	1,071,610
Vancouver	2,120,744	1,940,329
Victoria	660,380	764,597
Quebec	1,862,416	1,677,898
Ottawa	2,827,430	2,415,230
London	1,150,944	928,153
Total	$76,419,382	$64,936,486

Vault doors in Bank of Montreal and Royal Trust Company, Montreal Three times larger and heavier than any other in Canada. Doors and Vestibules weigh **60 tons**. Total weight of lining and doors **260 tons**. Accepted to be the finest piece of vault work in construction and workmanship in the Dominion. — Built by the old established firm of

J. & J. TAYLOR, Toronto Safe Works, Toronto.

Established 1855.

STEAM vs. ELECTRICITY.

The following remarks by the Canadian commercial agent in Norway, Mr. C. E. Sontum, on the comparative merits of steam and electric locomotives may be of interest to Canadian railroads:

"On the wide track road which runs from Sannesund up to Hafslund station, in the southern part of Norway, and which has a grade of 1.30 meters, with a smallest radius of 1.60 metres, there are run both electric and steam locomotives, and the company operating the road has had the following experience: A steam locomotive of 90 tons weight pulls only with the greatest difficulty two freight cars loaded with ten tons up the hills, and when the rails are wet from rain the locomotive frequently has to back up and make a new start to go up. On the other hand, the electric locomotive of only 22 tons weight pulls six such loaded freight cars easily up the hills, even when the rails are wet, and on a side-track with a rise of 1.26 metres the electric locomotive pulls four loaded cars. When the steam locomotive with its cars has come to a stop on the above-mentioned grade, its ability to get a new start discontinues, as the wheels slide on the rails, but the electric locomotive, after such a stop, has no difficulty in getting a start with its full-loaded freight cars. The experience obtained on this road thus confirms the ability of electric locomotives to go up heavy grades, and they should, therefore, to a large extent be practical for helping steam locomotives with large trains up grade.

DEBENTURES

Tenders addressed to the undersigned will be received up to 5 o'clock on Monday, the 23rd day of October, 1905, for the following Debentures of the City of Moose Jaw.

$6,000, ten years, five per cent. Debentures issued for permanent walk purposes, dated 1st November, 1905.

$38,500, fifty years, five per cent. Debentures issued for Sewer purposes dated 1st Nov., 1905. Tenders will be received for this block in whole or in half.

Said Debentures, Principal and Interest are payable at the Canadian Bank of Commerce, Moose Jaw, annually.

Further particulars can be obtained on application. Highest or any tender not necessarily accepted.

BRANTFORD'S JUBILEE.

The growing and enterprising city of Brantford has seen but a few days in its history which can compare in glory with Saturday last, when it was promoted to be a main-line point on the Grand Trunk Railway. Heretofore, Harrisburg, four miles distant, has been the starting point of a loop line to the Telephone City, the old main line running from Hamilton to Paris, passing through Dundas, Capetown, Lynden, and St. George. Now, however, the Grand Trunk Company, in return for a bonus of $57,000, given by Brantford, agree to run all their principal trains between Suspension Bridge and Sarnia, by way of that city. A fine commodious station has been erected at a cost of $50,000, besides which considerable expenditure was incurred in erecting a bridge over the Grand River at Paris. It looks as though Brantford were on the eve of a still more considerable development, which this improvement in transportation will do much to encourage. As we have said above, the inauguration of main-line trains through Brantford was made a gala day by the citizens of that place.

An enormous crowd greeted the arrival of the official train, having on board Mr. Hays, the general manager of the Grand Trunk, and that gentleman, in formally declaring the line and the new station open for business, made a capital speech. Brantford, he said, would now come directly in competition with Toronto, Hamilton, and other cities, and it would have to play its part in all that went to make a great and prosperous community. He explained that railways were sellers of transportation just as manufacturers and business men were sellers of the articles they dealt in. They desired to make their wares attractive. It was also their wish to help develop industries and help build up business, in order that they might get a return on securities invested. Railway managers must show stockholders that they were getting value for the money invested. Mr. Hays felt that this country was just on the eve of a great railway development, and predicted that within the next ten years there would be more miles of railway built in Canada than there had been in the past twenty-five years. The Grand Trunk Pacific would not fill the demand in the West. He believed with Sir Wilfrid Laurier that it would be followed by a third and a fourth line. There were several other speakers, including Hon. W. J. Hanna, Provincial Secretary of Ontario; Mayor Urquhart, of Toronto; Mr. T. H. Preston, M.P.P., etc.

* * *

MINING MATTERS.

Concerning the North Hastings district, we read reports to the effect that the indications as to the development of mining interests are all of favorable character. The stamp mill at the Craig gold property has been doubled in capacity, the cost of working the ore by it having been reduced apparently to a minimum. Work has been temporarily discontinued in the gold mine at Bannockburn on account of the inflow of water having exceeded the present pumping capacity. Lead mining has been commenced at the Katharine mine, near Millbridge. A new smelter is now being built at Bannockburn, and ore from the Katherine will be treated there. Shipments of fluorite are being made from Stephen Wellington's property near Madoc. He is also mining talc at the Moira Lake mine. At the old Moore iron and copper mine at El Dorado, a new compressor has been installed. Iron pyrites is being shipped by the British America Development Company from their mine at Queensboro'. Operations have been resumed at the Silver King. A new steam plant is to be installed. Work has also been resumed in the pyrites mine near Bogart.

Messrs. W. H. Armstrong and C. F. Law, of Vancouver, who own a group of claims on Bear Creek, near Princeton, B.C., state that development work shows they contain high-grade ore in large body, and running from $50 to $60 gold. They will probably instal a stamp mill and other machinery.

At the Trail smelter, which now has four copper furnaces, with a combined capacity of 1,000 tons per day, another gold-copper furnace is to be added, it is said. About 4,000 tons per week are now coming in to this smelter from Rossland mines. With the proposed new furnace, the smelter's capacity will total 8,750 tons per week.

* * *

PROVISIONAL DIRECTORS.

Editor, Monetary Times:—

Sir,—In view of the recent disclosures in insurance circles in the United States, I venture, as a constant reader of your valuable journal, to ask for information concerning the projected organization of the Sterling Bank, a prospectus of which recently appeared among your advertisements.

Much parade is made in the advertisement of the gentlemen who, it is proposed, will act as directors; prominent in the list are the names of several officers connected with some of the smaller insurance and loan companies, and the thought has occurred to me, as well as to others, "Are these gentlemen taking up the transaction as a personal investment or with the intention of using company moneys to qualify?" Are you in a position to throw any light on the subject?

It is disquieting to reflect that moneys devoted to providing for the maintenance of widows and orphans can be diverted to issues of this character by the will of any single individual for personal aggrandisement.

If it is not the intention to draw upon the resources of the companies, may I ask what particular strength is afforded the bank in selecting directors from this class of men? I have no fault to find with the gentlemen personally, but I think I am correct in the contention that, as salaried officers, their whole time belongs to their individual companies, and they have no right to embark in any enterprise calling upon their services in a business capacity.

Constant Reader.

30th September, 1905.

[Some time ago, 4th August issue, page 146, we took occasion to say something about the prospectus of the Sterling Bank of Canada. It had not occurred to us then that the men whose names are on the provisional board of this intended institution had any intention of using the money of the companies with which they were connected to qualify them as directors, as the letter given above suggests. And although we know no more than "Constant Reader" himself about the matter, we should be unwilling to accuse them of any such proceeding. A man like S. C. Wood is not likely to do it, even if he were allowed; neither is John Dryden, nor David Dexter. The other half dozen are not so well known in the financial community.

It would say little for the business-like conduct of any of the insurance or loan companies mentioned in the list if, as "Constant Reader" puts it, moneys provided for widows and orphans could be diverted to issues of this character "by the will of any single individual, for personal aggrandisement." As to the second query in the letter, "what particular strength is afforded the bank in securing directors from this class of men." We do not consider the list a strong one as regards the financial worth of the men. Nor would the united spare funds of the companies they represent as directors or managers suffice, with one or two exceptions, to make the proposed bank a weighty one even supposing their managers or directors were permitted to use their funds for personal purposes. There is weight in the contention of the writer that salaried officers should keep out of such ventures, because their whole time should be given to the companies which pay them. And shareholders would be justified, when the time came for selecting the real directors, in making choice of such among their number as would be free from the criticism that their time was not their own to devote to the bank's purposes.—Ed. M. T.]

HATS AND CAPS

Our samples for 1906 comprise a great variety of English, American and Canadian Goods.

Our two leading lines of "**HENRY CARTER**" and "**WILKINSON**". Hats are of exceptional beauty and value, their exquisite colors and rare quality will be unsurpassed.

Light Weight Hats are our specialty.

ROBBERIES FROM THE PERSON.

A Chicago correspondent of the Monetary Times sends the following letter under date 3rd October. "The enclosed cutting from the Chicago Record-Herald of recent date will, I think, be not without interest to you in view of the fact that the special form of crime referred to is perhaps more prevalent in your city of Toronto than in any other place that I am aware of in Canada.

" 'The list of hold-ups in Chicago prepared by the Record-Herald shows a surprising prevalence of this special form of crime. An equally great number of such robberies might not be alarming in winter, for in winter it is established tradition that Chicagoans must be always ready to open up their pockets to street pads. But summer is the time of year when freedom from that danger is expected. In the first month of Chief Collins' tenure of office the number of hold-ups was very large. The natural explanation was found in the presence in this city of a large number of men who had been attracted here by one or another object in connection with the big strikes of the winter and spring. The second month of the chief's term now shows that conditions are growing worse rather than better.'

"I am old enough to remember the period when the streets of London, England, were rendered unsafe by a series of robberies from the person with violence, to which the term garrote was given. The authorities were much troubled how to deal effectively with the ruffians who were guilty of these attacks, as terms of imprisonment seemed to have no effect upon such criminals. At last some one suggested the application of the lash, and an Act was passed I think which authorized the infliction of this method of punishment with very happy results. As soon as it became known that any one convicted of this crime would be treated to a certain number of lashes with the cat on entering the prison, to be followed by a second dose before being released, it had a wonderful effect upon a class of criminals who dread above everything the infliction of suffering upon their own persons, while quite callous how much pain they give to others. From that day to the present, nothing more has been heard of this particular crime, and the thought suggests itself very naturally whether the citizens of Toronto as well as Chicago might not protect themselves in an equally efficacious manner if they will only have the courage to face the difficulty in the same way that the sensible people of London did years ago."

* * *

BANKING AND FINANCIAL.

The Molsons Bank will shortly open another branch in Toronto, we hear, at the corner of Queen Street West and Beaconsfield Avenue.

A branch of the Bank of Toronto has been opened at Parry Sound, Ont., under the management of Mr. W. A. Bourne.

We are informed that a branch of the Bank of Ottawa is to be opened at Stoughton, N.W.T. This place is in the Province of Saskatchewan, about twenty-five miles from Arcola on the C.P.R.

The Sovereign Bank announces that it has closed the branch at Formosa, Ont., and opened one at Thorndale, Ont. They have also opened in the Labor Temple, Toronto. This last addition makes the number of this bank's branches fifty.

The directors of the London and Canadian Loan and Agency Company, Limited, at their meeting on Tuesday of this week, unanimously elected Mr. F. Barlow Cumberland and Mr. A. H. Campbell, Jr., as directors, to succeed Dr. Larratt W. Smith and Mr. T. R. Wood, lately deceased.

An exchange tells us that a French bank, with a capital of $25,000,000 is to be established in Argentina, French capitalists having of late shown great interest in that prosperous republic. We are disposed to think that the capital is more likely to be 25,000,000 francs.

The establishment of business courses in universities was promoted eight or ten years ago by the American Bankers' Association, following the example set by the University of Pennsylvania. The president of the University of Illinois, Mr. Edmund J. Jones, asking the question: "What is the reason for the sudden and rapid development of such departments of instruction in our higher institutions?" answers it thus: "In the first place, the recognition on the part of our colleges and universities that there is a field of higher education which has hitherto been entirely unexploited for their purposes. They have engaged in educating the physician, the clergyman, the teacher, the dentist, the lawyer, the farmer, but have never undertaken to train the banker, the railroad man, the insurance manager, the merchant—in general, the business man."

* * *

FIRE INSURANCE.

Mr. Charles D. Cory, adjuster of fire losses, has removed his office from 26 Wellington East to No. 6 on the same street.

We notice the removal of the Toronto offices of the Phoenix Assurance Company, of London, England, to No. 6 Wellington Street East. They were formerly at No. 16 Wellington East. Mr. J. H. Ewart is the general agent.

Mr. Miles M. Dawson, one of the editors of the New York Chronicle, thus writes to his journal in February of last year, after viewing the ruins of the Baltimore conflagration. "Firemen tell me that their difficulty in dealing with the spread of the fire to these tall buildings was their height [15 to 20 stories]. They could not scale them; they could not force water up to the higher stories from the street; and they were soon driven out of the interior."

It is declared by Mr. Thomas Johnson, who is attorney for the fire department of Chicago, that one-fourth of the fires in that city are incendiary. This is a very striking statement, and he wants to have an arson bureau established to investigate the causes of fires where needful. "Most of the large responsible companies have adjusters," said Mr. Johnson, "but some of the smaller companies have none. These public adjusters chase fires, get property owners to

100th DIVIDEND.

The Shareholders of The Molsons Bank are hereby notified that a dividend of FIVE PER CENT. upon the Capital Stock has been declared for the current half-year, and that the same will be payable at the Office of the Bank, in Montreal, and at the Branches, on and after the

Second Day of October next.

The Transfer Books will be closed from the 18th to the 30th September, both days inclusive.

THE ANNUAL GENERAL MEETING of the Shareholders of the Bank will be held at its banking house, in this city, on MONDAY, the 16th of OCTOBER next, at three o'clock in the afternoon.

By order of the Board,
JAMES ELLIOT,
Montreal, 29th August, 1905. General Manager.

The Bank of British North America.

INCORPORATED BY ROYAL CHARTER.

The Court of Directors hereby give notice that an interim Dividend free of Income Tax, for the half-year ended 30th June last, of thirty shillings per share, being at the rate of 6 per cent. per annum, will be paid on the 6th day of October next to the Proprietors of shares registered in the Colonies.

The dividend will be payable at the Rate of Exchange current on the 6th day of October, 1905, to be fixed by the Managers.

No transfers can be made between the 22nd instant and 6th prox., as the books must be closed during that period.

By Order of the Court.

sign contracts to give them 25 per cent. of the insurance recovered, and then collect stenographer fees and incidentals until there is little insurance left for the persons who are entitled to it." Since January 1st of this year, 782 fires have been investigated by the fire attorney, but he says this is only a fraction of the total number which should have been investigated. Public adjusters, according to Mr. Johnson, have, in a dozen cases, within the past eight months, been known to reach a fire ahead of the fire department. In thirty-two fires reported as "suspicious" witnesses have told the fire attorney they had been instructed by fire adjusters regarding the stories they should tell. A most demoralized state of affairs, truly, and one that it requires more than an arson bureau to cure.

* * *

LIFE AND ACCIDENT INSURANCE.

On Monday last, the directors of the Ontario Accident Insurance Company met and elected Mr. Arthur L. Eastmure to the presidency of the company, to succeed the late Dr. Larratt W. Smtih. At the same meeting, Mr. W. H. Pearson was elected vice-president, and Mr. J. F. Smith, K.C., a member of the executive committee. Mr. W. R. Brock has accepted the vacant seat on the board.

The London Review of September 15th announces the death of the proprietor and editor of the Review, Mr. Thomas Tully, which occurred at a quarter to three on Thursday morning, the 14th September, after a long and painful illness of four months' duration. We regret to hear such news. Mr. Tully had done valuable service for underwriting, and had exerted himself often and with good effect in exposing swindles in the English insurance world. He was well-informed, too, and had a racy way of expressing himself that was refreshing. His loss will, we should think, be keenly felt.

In answer to "Nova Scotia," who writes from Halifax, we would say that a publication of the kind he describes was foreshadowed by Mr. Israel C. Pierson, retiring president, at the May meeting of the Actuarial Society of America. He has collected the full biographical data of more than 40,000 college graduates, covering the period between the date of matriculation and the date of observation or of previous death, in each case. "The statistics represent the graduates of more than thirty colleges or universities, and include at least a century and a quarter of college records from 1770 to 1903. It has been impossible to consummate the work for this meeting, but these data will be utilized and presented to the society . . . as 'The Experience of College Men—a Select Class.'"

* * *

BOOK NOTICES.

The catalogue for 1905-6 of J. Arthur Paquet, with its border of maple leaves and its device, on the cover, of a bear hugging the globe, is a fascinating document, whose illustrations of the goods produced by this well-known Quebec house go far, in their number and variety, to justify the claim of the proprietors, by way of motto, namely, "We Keep the World Warm." There are 175 pictures—so one of our interested household says who has counted them—of different garments and articles made of fur. And a description of each, with its appropriate catalogue number. They range from a woman's electric seal jacket, satin lined, to an astrachan duchess; from a man's coon coat to a black beaver, lined with mink; from a child's paletot of grey lambskin to one of white rabbit. We cannot pretend to enumerate or adequately to describe the many handsome garments here so deftly pictured, or the fur wraps which ladies now adorn themselves with—collarettes, boas, ruffs, muffs, storm-collars, mitts, caps and stoles. So fashionable have stoles become, indeed, that nine pages of the book and fifty illustrations are devoted to them. And the furs! one never knew until to-day, it would seem, that there are so many fur-bearing animals in the world. The ones we used to know best appear to be out of vogue, or else re-named. Here we find brown long-hair coney; black-sheared coney; white coney; blue or white Thibet; black or white hare; Texas mink, Japanese marten, out of which to make women's adornments. And in former pages of the interesting pamphlet are to be found chinchilla, squirrel, raccoon, and even musk-rat and skunk (though we thought such polite people as Paquets are would have before this time found some more delicate English names for these last two. In French, one is called rat musque, and the other Alaska). The house has a deserved reputation for good goods, from furs to moccasins and snow-shoes, and must do an enormous trade, for it has branches in Montreal, Ottawa, Toronto, and Winnipeg. The name of Paquet as a fur dyer and dresser has stood high in Eastern Canada for many a day.

* * *

OUR SAINT JOHN LETTER.

The announcement made to-day that there is not to be a sale of the Bank of New Brunswick to the Bank of Montreal has given great satisfaction, for generally there was a strong feeling against the amalgamation, reported in certain newspapers last week as impending. These objections were both sentimental and financial. The feeling of regret that the only local financial institution of the Province, and one with a particularly good record, was to be merged in a large concern would not carry great weight if the financial arrangement was a satisfactory one, but of this there was grave doubt. Neither the directors of the Bank of New Brunswick nor those of the Bank of Montreal would make any statement as to the terms of the merger, but generally it was believed the local bank stock was to be valued at $350 per share and the Bank of Montreal stock at $250. This at the first announcement was considered a good sale, for the local selling price of Bank of New Brunswick stock is slightly under $300. When it was looked into, however, it was seen that it was not an advantageous proposition, because the Bank of New Brunswick pays all local taxes, while, if shares of the Bank of Montreal stock were taken in exchange, these would be liable to the civic taxes, and the annual expenditure would cut the net dividend considerably below that now received. The Bank of New Brunswick pays 12 per cent. and the Bank of Montreal 10, and it is figured that the owner of ten shares of Bank of New Brunswick would get fourteen shares of Bank of Montreal stock. On this his dividends would be $20 greater than on the Bank of New Brunswick stock, but taxes at the present rate of $1.75 would leave him about $40 poorer than under the present arrangement. How far the negotiations for the sale of the Bank had proceeded is not known, but after the semi-weekly meeting of the directors of the Bank of New Brunswick to-day it was announced that there are no negotiations on either to buy or sell, and no present likelihood of the bank changing hands. Mr. Stavert, the manager, who is thought to have been strongly in favor of the change, will enter the employ of the Bank of Montreal on January 1st, so the Bank of New Brunswick must now look for a new manager, and must decide on its future course. There are some who would like to see it increase its capital and strike out into the West for a share of the business in that section.

The Transcontinental Railway Commissioners are now making a trip through New Brunswick, after which it is believed the route of the Grand Trunk Pacific through this Province will be announced. They were at Woodstock to-day, and expect to make a trip from there to Fredericton, the capital, by automobile, thence across country to Chipman and Moncton. There is a strong political pull in favor of the St. John river valley route to Fredericton, and it remains to be seen whether this or the central route will be selected. The engineering surveys are said to favor the latter.

The Province of New Brunswick has lost a prominent citizen in the death of William H. Murray, head of the lumbering business of Murray & Gregory. Mr. Murray, who was seventy-three years of age, was a large holder of

Bankers—Great Britain—The National Bank of Scotland. New York—The American Exchange National Bank. Montreal The Quebec Bank.

timber lands, and had investments in many local enterprises. He is believed to have left an estate of over half a million, a very large fortune in this section of Canada. Mr. Murray was a bachelor.

Apparently there is plenty of money in St. John. Saturday was the last day on which citizens could pay their taxes and save the 5 per cent. discount. The total amount received at the city hall was $358,212.79, which is $59,000 in excess of the amount received up to the same period in 1904, and far in excess of the amount ever previously received up to the 1st of October. By paying these taxes citizens saved in discounts over $18,600, while the city makes the collections cheaply and gets immediate use of the money. All who failed to pay will now be sent constable's bills, and will have to pay an extra fifty cents therefor.

The legal battle over the affairs of the Cushing pulp mill becomes more complicated every day A new appeal is to be carried to the Supreme Court at Fredericton from the order of Judge McLeod, putting the property in liquidation, and from there it will go to Ottawa. It is a prètty safe guess that all the machinery of the law will be exhausted before the matter is finally disposed of.

The accountants of St. John have had a preliminary meeting, and are arranging to form an association for mutual protection.

G. S. Mayes, who has secured from the Dominion Government a contract for dredging in St. John harbor for the new deep-water wharves the city will build, has brought here a large and powerful dredge, which he bought in Boston. The dredge will begin work at once. The tenders for the wharf building close next week.

Some announcements have been made by the C.P.R. and Allan lines of their sailings from this port during the coming winter, and these show that the biggest business in the history of the winter port is expected.

* * *

St. John, N.B., 2nd Oct., 1905.

* * *

—The new president of the Manufacturers' Association, Mr. C. C. Ballantyne, of Montreal, denies that that city is behind Toronto or Hamilton in getting her proper share of the business of the North-West, but admits that her merchants are not putting forth the efforts they might to retain it. He warmly recommends Eastern merchants to visit the West and declares, what is undoubtedly true, that those who do not visit that country every year cannot comprehend the West's powers of absorption. Next year, however, the Manufacturers' Association will hold their annual meeting in Winnipeg, which will be followed, no doubt, by excursions into the heart of the Empire's great grain supply, and Eastern men who have not already been there, will then return fully seized of the capacity of that great district.

* * *

—If the opinion of Mr. C. R. W. Douglas, of Boston, is to be relied on, British Columbia lumber is going to be increasingly in demand from this time forth. As a representative of a large lumber company in New England, he is in Vancouver engaged in purchasing large lots of rough lumber of large dimensions. The price of lumber is going up so rapidly in the Eastern States, he says, that it will not be long before its importation from the Pacific Coast, particularly British Columbia will be imperative, in spite of the duty and the extremely heavy freight charges. Efforts are being made in New England to have the duty on lumber entering the States taken off, but these efforts have a tremendous pressure to overcome. Mr. Douglas speaks very highly of British Columbia shingles.

* * *

—Senator Mackay expressed very near the exact feeling of the citizens of Montreal generally when he said last week to his fellow-harbor commissioners that the body just named is simply the laughing-stock of the community for its wranglings and delays. He said that their conduct as commissioners was simply a farce, and that one man, with a knowledge of the affairs of the harbor, could conduct its business better than the present eleven members. It is natural to ask why, under such circumstances, he remains chairman of such a body. The Senator, it seems, is tired of the position, and has offered his resignation, but it was not accepted.

* * *

—The offices of the Canadian Government in London have had enquiries recently of the following nature: A Copenhagen (Denmark) firm of building material merchants desire to extend the sale in Canada of "compo-board" which they manufacture, and ask for likely importers. A London firm making warm woolen hosiery have asked to be placed in communication with Canadian buyers of such goods. Enquiry has been made by an Italian firm for the addresses ot first-class firms in Canada importing men's hats, (woolen and fur). The names of manufacturers in Canada of coin-in-the-slot machines, advertising novelties, talking-machines, cash registers, etc., are asked for by a London agent who is open to represent such firms. An English firm of manufacturers of table delicacies wish to communicate with Canadian packers of canned fruits, with a view to handling a special brand in the United Kingdom.

* * *

—A prominent feature of the Houghton Land Company, of Winnipeg, and London, Eng., which is just now starting in business, is its crop payment system. That is to say, the legal estate in the lands remains in the hands of the company, which simply "gives an agreement to the purchaser to convey the land to him on his paying thereof—the purchaser agreeing to break and bring under cultivation a stated portion of the land each year, and to deliver one-half of the grain crop, or a lesser amount as may be agreed on, at an elevator adjacent to the lands, when the same becoming the vendor's property, the purchaser is at once credited with the market value of same, equal to cash, first on taxes, then on interest, and the balance goes to reduce the original purchase money." This system is said to have worked already very successfully in the Belmont district.

* * *

—On the occasion of the annual convention last week of the National Association of Agricultural Implement and Vehicle Manufacturers, there was a very enjoyable banquet at the King Edward Hotel, Toronto, presided over by Mr. W. K. George, late president of the Canadian Manufacturers' Association. Mr. Byron E. Walker, general manager of the Canadian Bank of Commerce, who generally says something of more than ordinary after-dinner interest when he happens to speak at such functions, was one of the speakers. In proposing the toast of "Our Commercial Relations," he said that the development in agricultural machines had made possible the present advanced industrial conditions. Of all the lines of manufacturing there were none so useful as those for preparing the ground for the reception of seed and for cutting it after it had reached the proper stage. He did not mince matters in pointing out that in the United States, with 80,000,000 of people, they had not now that profusion of land that was the case some years ago. Canada had 6,000,000 of people, and for every $3 worth of products they sold to England they bought $1 worth from her, and at the same time borrowed $2 from Britain in order to pay the United States and keep the balance right. He could safely say that there was no feeling in this country hostile to reciprocity with the United States. They were not willing, however, to open a market of 6,000,000 to a nation of 80,000,000, who would not open it to them. Mr. Walker said he quite realized that a country of 80,000,000 would not change its policy for a country of 6,000,000. He did wish to point out, however, that the United States had drawn very recklessly on its raw material, and the time was not distant when that country would have to look more and more to Canada for that supply of raw material which would enable them to keep up their foreign trade.

Mercantile Summary

The Allan steamer "Victorian," which ran aground early last month, has been repaired, and started, though "light," on a trip to Europe.

Word comes from Emerson, Man., that the Great Northern Railway now has its grade surveyed for connection with the C.P.R., and the whole work is expected to be completed very shortly.

We lately noted the failure of Rameh & Boohanna, a Syrian jobbing firm of Montreal, dealing in fancy goods. We now learn that they are offering 20 cents on the dollar on liabilities of about $7,000.

A news item from Calumet, Mich., says that the Wolverine Cedar Lumber Company, of Menominee, in Michigan, has closed a deal for a large tract of timber on the Spanish river, in Ontario, estimated to contain more than 100,000,000 feet. The timber was bought of the Eddy & Flynn Lumber Company, of Saginaw, and the price paid $5 per thousand.

A report is extant in Port Arthur that the Marks-Riley rich hematite properties in Loon Lake district are to be taken over by the Mackenzie & Mann interests, with a view of supplying large industries to be established there. Work on the Nepigon branch of the Canadian Northern Railroad has started. It will connect with the Grand Trunk Pacific, and will be used largely as a supply road for that undertaking.

On Monday evening last was held in Toronto the third annual meeting of the Dominion Association of Chartered Accountants. The reports submitted showed the association to be in a satisfactory condition, having no liabilities of any kind. The following officers were elected: President, A. W. Stevenson, Montreal; first vice-president, John MacKay, Toronto; second vice-president, A. F. C. Ross, Montreal; treasurer, James George, Toronto; secretary, A. F. Mitchell, Montreal. Council—W. H. Cross, Toronto; Henry Barber, Toronto; John Hyde, Montreal; J. F. Cunningham, Ottawa; W. Simms Lee, Halifax.

An assignment on demand has been made by E. Gibault, at one time a leading general merchant of St. Jerome, Que. He opened in 1874, and at one time did quite a fair-sized jobbing business with the new parishes so successfully established in the Laurentides Mountains by the late Curé Labelle, well known as the Apostle of Colonization, thereabout, and after whom the present county of Labelle was named. The extension of railway communication in that district eventually cut off much of Gibault's trade, and of late years he has been thrice unfortunate through fire. The amount of his present liabilities is not yet ascertained, but as his business record has hitherto been excellent it is thought he should be able to effect a settlement readily.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST. EAST TORONTO.

Mercantile Summary.

Messrs. J. M. Kilbourn, of Owen Sound, and R. P. Butchart, who are interested in cement factories at Lakeside and Owen Sound, Ont., are reported to be looking over the ground at Calgary, Alta., with a view of starting a similar industry there.

Who will dare to say that Kingston has no interest in the past or no reverence for royalty? The sum of $345 was paid by a Kingston citizen a week ago for a mahogany and red plush chair made for the reception of King Edward in 1860 when he was Prince of Wales. It was sold at an auction of effects of Mrs. Drennan.

D. Rochon, of Maisonneuve suburbs, Montreal, is a waggon-maker by trade, which occupation he had to give up owing to ill-health. Latterly he has been running a local livery, and a year and a half ago he started a small dry goods business, conducted by his wife, which has resulted unprofitably, and he has now made a voluntary assignment. Of course, he got credit to start the store.

"Record cargoes" are every now and then made on the Great American Lakes when some new steamer comes out of the shipyards that will carry more grain or ore than ever before. On Saturday last what is called the largest cargo of grain ever shipped out of Chicago was cleared on the steamer "Geo. H. Russell." It consisted of 235,000 bushels of corn and 58,000 bushels of barley, aggregating 7,972 tons. The cargo went to Buffalo.

The shareholders of the Mexican Light and Power Company, at a special meeting, Montreal, Sept. 30, ratified the plan of the board of directors to increase the capital stock of the company by $4,000,000. The capital has been $12,000,000, and it is intended that it should be increased to $16,000,000. The increase in capital is being made to enable the company to put through a deal by which it secures control of the two largest remaining lighting companies in Mexico.

Messrs. Marion & Marion, patent attorneys at Montreal and Washington, report the following Canadian patents recently secured: 95,151, Chas. Smith Van Acker, Eocloo, Belgium, carving machines; 95,173, Carl B. Herrmann, Gravenhage, Denmark, method of producing stereotype plates for printing purposes; 95,180, Herman Greenberg, Montreal, weighing scale; 95,207, Geo. E. Gjuke, Trelleborg, Sweden, hydraulic rock drills; 95,208, Armand Janet, Paris, France, process and apparatus for producing oxygen; 95,220, Bernhard Cohnen, Grevenbroich, Germany, processes and machines for removing the more or less spent dye from centrifugal dyeing machines after the dyeing operation in order to prevent oxidation; 95,280, Ernest Carette, St. Francois, Que., sleighs; 95,293, Henri Harmet, St. Etienne, France, compressing steel in conical moulds.

A Change in the Trusteeship.

Whether of a Will, Marriage Settlement or Bond Issue, is a troublesome and expensive matter.

Where private trustees are appointed such changes are inevitable.

The Trusts Company alone enjoys continuity of tenure, fixity of residence and permanent records.

OSBORNE & FRANCIS,

54 King Street West, Toronto.

Mercantile Summary.

S. D. Walker & Sons' general store at Algonquin, near Brockville, was on the 28th ult. destroyed by fire, together with the Bell telephone office and the Public Library. Total loss was $3,500, insured for about one-half. The origin of the fire is attributed to incendiarism.

An order-in-council has now been passed by the Dominion Government granting permission to Mr. E. W. Backus to build a dam at Fort Frances across Rainy river for the purpose of developing electric power. Considerable opposition in the Senate was put up against the scheme on account of the proposed comparatively small amount of power to be furnished for the Canadian side, but the original plans now stand approved.

Louis Flam, for the past eighteen months keeping a small general store at Blackville, N.B., has made an assignment of his estate. He was formerly a peddlar in the district.—From Paquetteville, N.B., is reported the failure of S. Theriault, a farmer, who also did a limited store and peddling business, and whose liabilities are reported at about $1,000.—Mrs. J. H. L. D. Cormier, keeping hotel at Buctouche, in the same Province, is compromising at 25 cents. She was burned out in June last.

Several failures in the Montreal retail grocery trade are reported as follows: A. A. Perry, a leading dealer in the suburb of Westmount, is said to have compromised at 25 cents on the dollar, owing about $9,000 of merchandise liabilities and $5,000 advances from relatives. Perry failed once before, in 1876, and then clerked for a time, resuming business in 1890.—Samuel Smith, formerly a clerk of the above, and in business on his own account a few years, has assigned, owing about $3,000. His failure is attributed in some measure to complications with D. H. Rennoldson, wholesale grocer, reported in last issue as insolvent.—T. Bouchard, in a small way of business, has made an assignment, and offers 25 cents on the dollar.

We learn from the Detroit Free Press of a purchase by the Michigan Steel Boat Co. of the old Detroit United Railway car barns property on Jefferson Avenue from the Olds Motor Works. About 700 men are expected to be employed in building steel and wooden boats and canoes. Stock is on hand with which to build wooden canoes. About 2,000, perhaps, to be turned out for the 1906 season. The Detroit corporation recently bought out W. L. Luke & Co., of Oldtown, Me., and the business will be moved to Detroit. The Michigan Steel Boat Co. has for some time been manufacturing automobile bodies, which will be continued. This company's beginning was at Kalamazoo several years ago. It was bought and incorporated in 1902, when the plant was moved to Detroit and located at 1250 Jefferson Avenue.

PORT ARTHUR & FORT WILLIAM.

Post Office Address, — — Port Arthur, Ont.

Mercantile Summary.

The merchant always looks at the cash register instead of the barometer to tell when the day is dull.—Philadelphia Telegraph.

A correspondent in London writes to the editor of The Monetary Times: "In every way Canada is coming to the front in London and the Kingdom; and the interest shows signs of becoming deeper than in that of any other section of the Empire."

That was a tolerably harsh jolt which was given to the electrical workers of Berlin, Germany, on the 1st October, when the employing electric firms carried out their threat to inaugurate a general lockout of their striking employees if they did not return to work on 30th ult. By this lock-out 35,000 men were rendered idle. Negotiations, however, are in progress for a settlement.

The Boston Varnish Company, Limited, Montreal, capital $50,000, has been incorporated. It proposes to purchase, manufacture and deal in paints, chemicals, oils, glass, etc. Z. E. Martin, of Chicago, and J. B. Lord and H. A. Hall, both of Malden, Mass., are named. The same parties practically are interested in another $50,000 Montreal concern, entitled the Martin-Senour Company, Limited, also with a capital of $50,000, and with similar objects.

The Sovereign Construction Company, Montreal, capital stock $1,000,000, has received a Dominion charter. It will carry on the business of general contractors and builders, acquire water powers, manufacture and deal in railway supplies and other appliances necessary in its undertakings, to make or buy steam and sailing vessels. Geo. Wm. Cook, of Montreal, and Etienne Dussault, of Levis, are charter members.

Leading members of the Independent Order of Foresters, including Dr. Oronhyatekha, as president; Hon. W. H. Montague, vice-president and general manager; also Sir D. McMillan, K.C., Lieutenant-Governor of Manitoba; Hon. G. W. Ross, M.P.P., of Toronto, and Hon. R. P. Roblin, Premier of Manitoba, and several other prominent men, have formed a land and colonization company under the name of the Western Canada Settlers' Mutual. Its purpose is to bring young farmers from other parts of Canada, or from the United States or elsewhere, and start them in the West under particularly favorable circumstances and on easy terms. They profess "to buy and sell lands, to put settlers on lands, to invest money for people, and to help on the development of the West." There is, it must be confessed, a good field for such work. The capital of the company is, we are told, a million at present, but it is expected later on to be two millions. The office will be in the Canada Life Building, Winnipeg.

The Boiler-Flue Cleaner and Supply Company, Toronto, has been incorporated. It will construct and sell and repair engines, boilers, flue-cleaners, etc. C. F. Adams, of London, Ont., and A. C. Buell, of Buffalo, are members of the company.

It has been stated recently that the Grand Trunk Pacific Railway is in negotiation with the Dominion Iron and Steel Company for a supply of $4,000,000 worth of steel rails, to be delivered during the next five years. It is stated that latter company recently refused a contract for rails from a Chinese railroad owing to the sufficiently large domestic demand.

Upon demand, an assignment has been made by Haycock & Dudgeon, uptown dry goods retailers in Montreal. Both the partners are well-posted dry goods men, who began on small capital eight or ten years ago. They obtained the confidence of a large Glasgow house, which supplied them with goods without stint, and they were evidently tempted to trade beyond their capital, besides which they recently became involved in some litigation with their landlord. Their liabilities are said to reach about $90,000, fully two-thirds being to the house above indicated.

In an interview at Minneapolis a few days ago Sir Thomas Shaughnessy, president of the Canadian Pacific Railway, said: "Plans for double-tracking our line are well under way, the principal work now being between Fort William and Winnipeg, but we also have 400 miles laid between Winnipeg and Regina, and the ultimate extension of this improvement to the entire main line will be accomplished as conditions warrant. No westward extension of the Duluth, S. S. and Atlantic is likely in the near future. We will build 500 miles more road next year, however, in Canada to meet conditions as they arise. With larger cars and other improvements we have practically doubled our capacity for handling the crops, but the pressure of business is as heavy as ever."

Mercantile Summary.

V. J. Hedden & Sons Company, Limited, intend to carry on a general builders' and contractors' business in Toronto, with a capital of $100,000.

A. A. Barthelmes & Co., Limited, Toronto, with a capital of $200,000, have a charter from the Ontario Government to make and deal in musical instruments and acquire the business of A.A. Barthelmes.

The Northern Exploration Company, Limited, share capital $100,000, has been granted a charter by the Ontario Government to carry on a mining, milling, reduction and development company's business, with incidental powers. F. M. Perry, M.E., and Stair Lander, of Toronto, are interested.

A by-law to give a bonus of $25,000 to the James Bay Railway to establish a divisional point and erect machine and car repair shops at Parry Sound was defeated in one ward of that town, but one to raise $20,000 for the improvement of the local electric light plant carried by a large majority.

Early this week it was reported in Winnipeg as an indication of the active grain movement which has been going on this season that two and a half million bushels of wheat have been marketed at Canadian Northern Railway points, of which amount one and a half million bushels have passed through Winnipeg to the lake ports. During the whole month of September last year only 650,000 bushels were delivered to the C.N.R., and 327,000 bushels shipped to the Lake Superior elevators.

In January last E. S. Giffin, of Lockeport, N.S., bought out the general store business of J. W. Giffin & Co. Now, in October, he writes creditors that he finds he is not in a position to meet his maturing obligations, and proposes that they accept 50 per cent. of their claims, which they are not likely to do without further explanations.—A. W. McDonald, general dealer at Hopewell, N.S., lately reported as seeking compromise indulgence, has now assigned. The account has been found of a slow, unsatisfactory character for some time past.

The Richelieu and Ontario Navigation Company have decided on making several important improvements to their service before next season, owing to the great increase in their business. The plans are said to include the building of another vessel of about the size of the new "Montreal," to ply between Montreal and Quebec, two new steamers to ply between Montreal and Prescott, and the lengthening out of the steamer "Toronto," so that forty additional staterooms may be gained. It is planned to make the two steamers operating between Montreal and Prescott have a capacity of fifteen hundred passengers each. That is, that they will having dining accommodation for 1,500, as compared with 600 as at present.

AGENTS WANTED in every unrepresented District in Canada.

James Wilson, the claims agent for the Canadian Pacific Railway at Toronto, died suddenly while seated in his office chair on Saturday morning. He had been connected with railroad interests all his life, and was appointed in 1890 to his late position, which he filled with satisfaction to all.

Our Saint John letter mentioned, a fortnight ago, the difficulties of some tow-boat men, arising from low water in the St. John river. We now learn that Parker Glasier, of St. John, N.B., doing business as a tugboat owner, under the style of D. D. Glasier & Co., has been obliged to assign as the result of late unfavorable conditions of business in his line. The liabilities are quoted at about $10,000, while he shows apparent assets of some $20,000.—Oscar Silverstein, dealing in cigars in the same city, is offering his creditors 35 per cent. on liabilities of about $5,000.

A Portland, Ore., paper says that retaliation upon the Hill lines for building the Portland and Seattle Railroad to reach Portland by the water level route along the Columbia river will come in the form of new traffic agreements, by which the Oregon Railroad and Navigation Company will admit the Canadian Pacific into the Columbia basin, through the Spokane gateway, and through such an arrangement use it as a weapon to combat the Northern Pacific and Great Northern Railways, their most aggressive competitors for northern traffic. By such an adjustment the present traffic agreement with the Great Northern would be abrogated and the Harriman lines would be in the advantageous position to offer Northern routing where desired, either for freight or passenger traffic, and prevent either of the rival competing roads sharing in earnings derived by such service. Another report says that the Great Northern is behind the new road, which is being built by Canadians, under the name of the Brandon, Saskatchewan and Hudson's Bay Railway.

The Canadian Pacific Railway Company is arranging for steamship connection between Vancouver and Ladysmith, B.C., which latter is now a place of 2,000 or 3,000 inhabitants. It is contemplated to have two trips by the steamship "Joan" each week each way.

That winter wheat is not the only resource of Southern Alberta seems to be shown by a report just to hand from Pincher Creek, speaking of the discovery of an oil gusher, with the large yield of 300,000 gallons daily (though it is well to discount these first oil reports quite largely), together with several smaller oil-producing wells in the neighborhood. The field is described as being less than five miles north of the boundary of the State of Montana and within forty miles of the main line of the C.P.R. The boring has been carried on, it is said, at the instance of John Lindham, a rancher, of Okotoks.

* * *

MONTREAL MARKETS.

Montreal, Oct. 4, 1905.

Ashes.—Present offerings are very small, and values are fairly held at the comparatively high figures lately quoted. Pearls are particularly scarce, and buyers are prepared to pay $8.00 for firsts. First quality pots are quoted at $5.25 to $5.27½, and seconds at about $4.75.

Cements and Firebricks.—A good aggregate of local business is reported, though outside orders are not very numerous. The general run of quotations range at from $1.80 to $2.00 for Belgian cement; English, $1.90 to $2.10; Canadian, $1.90 to $2.10. There is little being done in American or German makes. Firebricks are steady, $17.00 to $22.00 per thousand, according to brand.

Dairy Products.—There has been some strengthening in values of both butter and cheese since last report, though it appears to be a question if present prices of butter are not more or less artificial. Fancy creamery is quoted at 23 to 23¼c., and from 22 to 23c. for good to choice; dairy makes, 18 to 19c. For cheese there is a fair demand, with fine Westerns quoting at 11⅝ to 11⅞c, and 11⅜ to 11½c. for fine Quebecs. Cheese exports last week were fairly large, shipments by eleven steamships aggregating 93,122 boxes, being 4,000 boxes in excess of the figures for the corresponding period of last year. Of butter there were shipped last week 29,016 packages, being 9,200 packages more than at date a year ago.

Dry Goods.—The proportion of renewals asked on payments in this line due the 4th inst. have been small, and it is expected full returns will show up very satisfactorily. The almost August-like weather now prevailing is not helpful to city retail trade in this line, but wholesalers report a good business with the country. The week has developed nothing new in values.

Groceries.—Owing to the weak, unsettled conditions prevailing in outside markets for sugars, local refiners have made a further cut of 10c. a cental on all grades of refined, standard granulated being now quoted at $4.60 in barrels, with the lowest grade of yellows down to $4.10. In other lines there are no striking changes. Tapioca is very scarce, and is firmer at 4¼ to 4½c. Valencia raisins are cabled easier about a shilling. California prunes are much dearer than last year, it being figured that laid down cost will be 1¼ to 1½c. higher than last year. It is not expected that any French or Austrian prunes will reach Canada this year. Commodre figs are quoted very high. The "Bellona," the first direct dried fruit steamer, is due here about the 12th, and the "Jacona" a fortnight later. Nuts are all firm in prices, and the crop of walnuts is reported the smallest ever known.

Hides.—The usual monthly advance has taken place in lamb skins, dealers now paying 90c. each. Beef hides continue scarce, and rule firm at 1½ to 12c. for No. 1.

Leather.—Some orders for spring footwear are now coming forward from coast points, and leather men report a little more enquiry for leather. For manufactures No. 2 sole 24½c. is a pretty firm quotation, and there is reported scarcity of jobbing sorts of sole. Black leathers are all very firmly held at lately advanced prices, and Quebec tanners are reported comparatively bare of stock.

Metals and Hardware.—An excellent movement is reported in these lines. Pig iron is quoted firm at $19 to $19.25 for best brands of imported and domestic, as also are bars at the advance noted last week. Boiler plate, iron pipe, etc., also show some tendency to advance. Tinplates, Canadas, and black sheets sell at former prices, but galvanized sheets are rather firmer, and $4.40 is asked for 36-inch sheets of 28 gauge. Ingot copper is stiff at 17½ to 17¾c., and ingot tin is up again to 36½ to 37c.; lead, $3.70 to $3.80; spelter is dearer at 6¾ to 7c., and sheet zinc at 7 to 7¼c.; antimony, 14½ to 15c.

Oils, Paints and Glass.—Business in these lines is good. For glass there is a very active demand, stocks throughout the country generally being very low, while fresh supplies are hard to get from Belgium. Quotations are firm at $3.75 to $4.00 per 100 feet for first break. Turpentine is firmer at 93c. per gallon in single barrels. Linseed oil easy at 46 to 48c. for raw and boiled respectively. Fish oils dull. Shellac is firming up, white being quoted at $2.40 to $2.50; orange oil to 5c. less. Leads and putty are unchanged.

* * *

TORONTO MARKETS.

Toronto, Oct. 5, 1905.

Drugs, Chemicals, Etc.—The market for drugs locally is without feature. Prices are fairly steady and the market has a good undertone. Quinine and opium have made no appreciable change and business in these commodities is dull. The market for chemicals in the South, according to advices from Baltimore, Md., is firm and a good trade is being done. English reports say that

It DOES Make a Difference

which Company you insure in.
If making an investment in Real Estate or anything else, care is—or should always be—taken to secure property that has a reasonable chance of increasing in value, and giving a good return for the investment.
This same care should be taken in placing Life Insurance to see that the premiums are invested in such a manner that they give the best possible return to the insured.

IT **DOES** MAKE A DIFFERENCE WHICH COMPANY YOU INSURE IN.

Convincing evidence of the value of the Company's Policies from an investment standpoint will be mailed on application to:

CIGARETTES

STANDARD OF THE WORLD

SOLD BY ALL LEADING WHOLESALE HOUSES.

export trade in chemicals is good, though not very much demand for domestic requirements is to be noted at present writing.

Flour and Grain.—A fairly good volume of business is being carried on at the present time in both Ontario and Manitoba flour. Ninety per cent. patents fetch $3 in buyers' bags. A good trade is being done in millfeed, though there is a certain amount of scarcity in bran. Considerable activity prevails in wheat, and the quantity already coming through here inspected at Winnipeg is extraordinarily large. Oats are higher. There is a good export demand for barley at firm prices. Peas, rye, and corn are all practically unchanged. Rolled oats are a little on the easy side.

Fruit and Vegetables.—Cranberries are arriving in some quantity. Tomatoes are scarce and wanted. Grapes and peaches are still fairly plentiful and selling at fair prices. Prices may be quoted as follows:—

Peaches, 20 to 75c.; pears, 25 to 60c.; plums, 35 to 60c;. apples, basket, 15 to 25c.; grapes, Concord, 15 to 25c.; grapes, Moore's Early, 25 to 35c.; grapes, Niagaras, 16 to 30c.; Tokay grapes, $2.25 to $2.50; Cantaloupes, basket, 20 to 25c.; Cantaloupes, case, 65 to 80c.; Cantaloupes, Rockyfords, basket, 35 to 40c.; bananas, bunch, $1.75 to $2; lemons, box, $5.50 to $6; lemons, Jamaicas, barrel, $5.50; oranges, crate, $5.25 to $6; cranberries, barrel, $9 to $9.50; tomatoes, basket, 30c.; gherkins, 75c. to $1; celery, dozen, 30 to 35c.; onions, 25c.; onions, silver skins, 85c. to $1; onions, case, $2.50; sweet potatoes, barrel, $3 to $3.50.

Hides and Skins.—Though hides are coming in more plentifully, prices still keep very high. Sheep skins have gone up 10c. No change has occurred in tallow. For leather prices are unchanged, but the demand is brisk, and the position quite strong.

Provisions and Dairy Produce.—Creamery butter is in large supply and an easier tone is visible. Dairy continues about as before. Cheese is firmer than ever. Eggs are a little more plentiful with the return to milder weather, but values continue as before. Trade in smoked meats and provisions is quite active and the market strong.

Mercantile Summary.

Mr. Archibald Blue, census commissioner, took charge of the Dominion statistician's office at Ottawa on Monday last.

For the month of September the Canadian Pacific Land Department disposed of 112,728 acres of land for $561,407.52, which gives an average price of $4.98 an acre.

A Halifax exchange says that Rhodes, Curry & Co., of Amherst, N.S., have received a contract from the I. C. R. for the building of two hundred box cars; one hundred are to be built with a capacity of thirty tons and one hundred with a capacity of 40 tons. These are for November and December delivery.

Word comes from Winnipeg that during this season nine new churches have been built in that city and seven enlarged. Among the largest are Broadway Methodist, which cost $80,000, the German Evangelical Lutheran, $40,000; Point Douglas Presbyterian, $25,000; Zion Methodist will be opened in two weeks. It cost $70,000 and has installed a $6,000 St. Hyacinthe organ.

Town of Gananoque

DEBENTURES.

Tenders will be received by the undersigned until 4 o'clock p. m. of Tuesday, 24th instant, for the purchase of $35,000 Water Works and Sewerage Debentures, bearing Interest at 4%, payable half yearly, the money to be paid and Debentures delivered at the Treasurer's office in Gananoque.

Further particulars can be obtained on application to W. I. Wilson, Esq., Chairman of Finance Committee, or to the Town Clerk.

Highest or any tender not necessarily accepted.

S. McCAMMON,
Town Clerk.

Gananoque,
October 4th, 1905.

The growth of Custom house collections at the principal Canadian cities is marked. Montreal, for example, shows September duties of $1,077,000 as against $926,000 in the previous September and $3,349,000 for the three months as compared with $3,097,000. At Winnipeg, the collections of September were $283,708, where in September, 1904, they were $231,612. Toronto shows a considerable increase for the month.

The Halifax Chronicle of Friday last states that the Government is gradually acquiring the properties on the west side of Upper Water Street, between North and Gerrish Streets in that city, and tearing down the buildings and grading the land for railway purposes will likely soon be in progress. There has been some quibbling by private owners about prices, but as a rule the differences have been or will be settled.

Department, the number of automobiles in France registered for taxation purposes is 17,107. Of these 12,713 can seat more than two persons. Paris is represented by 3,146 automobiles, 2,613 of which have more than two seats. According to the Petit Journal, the number of horse carriages in France is 1,637,562 and that of cycles 1,150,098, including 16,118 with motors.

It is less than twenty-one years since the Edison Electric Company, which is now the General Electric, placed its works in the quiet town of Schenectady in New York State, the population of which town was at that time between 13,000 and 14,000. This year the population is 58,369, and the remarkable growth is largely by reason of the enormous development of the Electric works. Such companies have an enormous influence in fostering the growth of a community.

Some one, says Harper's Weekly, lately counted the vehicles that passed in a day on a road out of London. There were 4,577 bicycles, 567 motor vehicles—in all, 5,760. In France there vehicles—in all, 5,760. In France there are more than a million bicycles in use. Observing these figures, the Springfield Republican remarks that however it may be in this country, bicycles are not going out of use in England. For common needs of common people, it says, there is no vehicle to equal the bicycle.

The Canadian Electrical Development Company have made an agreement with the Toronto and Hamilton Railway Company. The latter company, we understand, undertakes to construct the line, and pay the interest on half of the cost of the right of way of the Power Company. By the arrangement, the Development Co. secures the construction of a line enabling them to control the right of way on their line. A difficulty at present has been the great gaps at the Humber, Port Credit, Bronte and Burlington, in the grade of the feed lines, and this is to be remedied. The company also secures a large customer for their electric power.

A meeting has been called by the Ontario Historical Society of military men and citizens generally, to be held at the old fort, foot of Bathurst Street, Toronto, on Saturday, 7th instant, at 3 o'clock, when a statement will be made of facts connected with Fort York, the oldest relic of the past in Toronto, and the most complete specimen of a stockade fort in Canada. Addresses will be made on the importance of this venerable spot as a feature of Toronto's future park system and upon the desirability of preserving a land-mark of exceeding interest to all who have any reverence for our defenders in the past. "The place is wanted for city tramways, for railway purposes, for industrial uses," is what we are told; and, indeed, a portion of it is already in use for factory purposes. But however proud we may be of the extension of our factories and the growth of our city, we should aim to grow not in wealth and bricks and mortar alone but in the less material elements which tend to make a community dignified and self-respecting. Other cities which have not in their earlier years paid attention enough to such matters as indicate a due regard for people and things of the past have later paid large sums to recover from the far-reaching grasp of unsentimental commerce bits of the long-ago for civic preservation. And Toronto will be unworthy of her reputation if she permits the Juggernaut of railway or tramway or any other kind of extension to crush out of existence reminders of the history of our city, which in future years we may lament without being able to replace.

⁂

MUNICIPAL OWNERSHIP.

Some facts and figures which may be pondered to advantage by municipal officers who are thinking, or whose clients are thinking of an extension of the principle of municipal management, are to be found in the experience of Sheffield, England. The Boston Transcript gives the report of Mr. Daniels at Sheffield on some of the drawbacks and dangers of public ownership of utilities serving the public. Says that gentleman:

"The city of Sheffield, in the management of its electric tramway system, finds itself confronted with a condition that some of the more far-seeing members of the city council (notably Sir Joseph Jonas, the lord mayor) have insisted has existed for some time, and that condition, despite the fact that the system has been operated at an apparent profit, while furnishing cheaper transportation than any system in the United Kingdom is due to a failure to properly charge off a reasonable amount yearly for depreciation of plant.

"The report of the tramways committee for the past year show the following condition: The mileage run was in 1901, 2,315,347 miles; in 1902, 3,791,993; in 1903, 4,926,083; in 1904, 5,768,231; in 1905, 6,049,899. The passengers carried rose from 61,450,993 in 1904 to 63,952,283, and the revenue from all sources from $1,130,738 to $1,170,713, an increase of 2,350,290 in number, $39,975 in revenue, and in car mileage, 281,668 greater than that of the previous year. In 1901 each car earned on an average 21 cents per mile run and the average fare per passenger was 1.8 cents. The figures for the following years were: 1902, 23½ cents and 1.8 cents; 1903, 20½ cents and 1.8 cents; 1904, 19 cents and 1.8 cents; 1905, 19 cents and 1.8 cents. If the fares per passenger in 1905 had been the same as in 1901 the revenue would have increased by the sum of $37,472. The average fare per passenger in Manchester was 2.38 cents. Bradford, 2.26 cents, and Liverpool 2.22 cents. The net profit in 1904 was $132,412 and in 1905, $84,317, or $48,665 less. This decrease was not due to cost of management being excessive, because the percentage of that cost was less than ever before; nor was it due to the cost of production of energy, for that cost in Sheffield is among the lowest in the country.

"The decreased profit was in the first instance attributable to the increased charges in 1905 over 1904 without any corresponding decrease in revenues. Salaries and office expenses previously charged to capital are now transferred to revenue, and represent $10,123; rates and taxes caused by reassessment, $17,817; repairs to cars, permanent way and power station, $37,536; interest on loans, $35,132; instalments for sinking fund, $22,193; making the total increased cash charges over the previous year $122,801. To be deducted from them were $10,738 decrease in traffic expenses, $2,655 saved in insurance, $12,348 decrease in power expenses, a total of $22,741. The corporation is constantly besieged with applications for extensions of the tramway service to outlying districts. This is felt to be a policy that ought to be adhered to, but it is apparent to all that no free extensions of the service are possible without providing in some way for increased revenue. It is also conceded now that the past policy of the tramway management has been wrong, in that they have not allowed enough for depreciation and renewals.

SCOTT & WALMSLEY,
ESTABLISHED 1858.
Managers and Underwriters.

"The city of Glasgow sets aside 6 cents per mile for depreciation; Manchester allows 2.4 cents, and Liverpool 2 cents; Sheffield is supposed to allow 2 cents, but if it had, the account instead of showing a surplus of $84,321, would have shown a deficit of $38,348. There the matter stands at present. The only remedy in sight appears to be to raise the rate of fare, and that no member of the Sheffield council seems to be ready to advocate."

It is sometimes the case that municipalities launch into conducting enterprises hastily or upon insufficient, perhaps inexpert, advice, and as the result of exasperation at over-charges by private or corporate ownership of utilities. From this cause it has come about in Canada that municipal ownership has not given at all times economical or satisfactory results. In some cases it has been shown to be disappointing. Such attempts might not have been made if careful enquiry had been made into the experience of other places.

⁂

UNITED STATES FINANCES.

Henry Clews & Co., New York, in their circular, dated New York, September 30, 1905, said, stock exchange speculation has this week reflected the cumulative indications of strain in the money situation. A further hardening of call rates has taken place; but, coincidently, evidence has developed of the determination of important banking interests to

WHO HOLDS THE CONTROL ?

In all Stock Companies the stockholders retain the full control, even where policyholders have been allowed "a voice" in the direction of affairs; but in a purely Mutual Company such as

The Mutual Life Assurance Co. OF CANADA.

the Policyholders alone elect the Board of Directors, who appoint all the Officers and, therefore, Mutual Policyholders, through the Board, control and perpetuate the efficient management of its affairs.

"Continuity of Management" is desirable only when exercised in the best interests of policyholders.

keep the situation under control and prevent as far as possible undue alarm and liquidation such as would naturally result from spectacular, even though temporary, advances in call rates. The additional engagements of gold for import under conditions that on the surface do not indicate profit suggest that the movement has indirect connection with stock market operations; and that the large cliques and operators who are the holders of the great bulk of the floating supply of securities are using every possible means to prevent a severe recoil during the season of monetary activity from the high prices to which they have advanced the general list of stock exchange securities. The outside public—in contradistinction to the professional manipulators and speculative interests—are not in the market as investors and have not been interested as such during the recent advance. Their only activity has been that of traders to catch fluctuations; and the burden, therefore, of maintaining the market at its present high level lies with the cliques and other professional interests already mentioned. Their efforts to support the market, or their efforts to scientifically unload in the face of the monoy situation that is now at hand. promise a period of active fluctuations for some time to come, and suggest the necessity of extreme caution in operations on the buying side and the advisability of taking quick profits. Extreme conversatism can hardly at this time be too strongly recommended in trading, especially in stocks that are now at record-making prices, as the "high and mighty" may fall like other mortals. Speculatively held stocks at abnormally high prices—at prices not warranted by dividend disbursements—are for obvious reasons particularly susceptible to the adverse influence of difficult banking acommodation. There have, it is true, been active and successful bull campaigns when money has commanded a much higher range than that now current. At the same time it is hardly probable that a readjustment of accounts to a higher money level can be accomplished without a period of active liquidation marking the progress of such readjustment. The immediate outlook certainly does not favor a return to the redundant money conditions that have been current thus far this year. It would not be surprising if a still higher call money rate should obtain during the coming week.

THE METROPOLITAN LIFE INSURANCE CO.

(INCORPORATED BY THE STATE OF NEW YORK.)

The Company OF the People, BY the People, FOR the People.

ASSETS, $128,094,315.24

Proof of Public Confidence

This Company has more premium-paying business in force in the United States than any other Company, and for each of the last 11 Years has had more New Insurance accepted and Issued in America than any other Company.

The Number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec and Ottawa.

Significant Facts

This Company's Policy-claims paid in 1904 averaged in number one for each minute and a quarter of each business day of 8 hours each, and, in amount, $102.54 a minute the year through.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1904.

391	per day in number of Claims Paid.
6,561	per day in number of Policies Issued.
$1,426,700.50	per day in New Insurance Written.
$114,060.67	per day in Payments to Policy-holders and addition to Reserve
$73,326.8	per day in Increase of Assets.

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave. New York City.

Amount of Canadian Securities deposited with the Dominion Government for the protection of Policy-holders in Canada, over $2,600 000.00

Canada Life's Total Business

Think how many people will benefit from the amount of insurance carried in the Canada Life.

At present the Company's total business is

Over $105,000,000.00

The Sun Life of Canada had a triumphant year. Impossible to give the increases in this space—suffice it to say that never has the Company's motto "Prosperous and Progressive" been so magnificently maintained. Ask for leaflet giving the Record of 1904.

THE WESTERN OUTLET.

Manitoba is no longer the "West" that it was only a few years ago. At least the "Far West," which includes British Columbia and the new provinces of Alberta and Saskatchewan, is what is usually meant when one refers to the wonderful development being made in new settlement, grain-growing and transportation matters. The extraordinarily rapid growth of the Edmonton district and the equally marvellous manner in which winter-wheat has come to the front in the formerly great ranching region of which Calgary is the centre, indicate that ere long the problem will be to find the most economic outlet for the vast stores of agricultural and perhaps mineral wealth in the Far West of Canada seeking profitable markets. The greater part of the immense production of Manitoba will, no doubt, continue as heretofore to roll eastward by way of Fort William. But as prefaced, Manitoba is a long way from being the centre of the probable future West, and just in the same way that eastern ports may be the natural outlet for its production, such outlet for the products of that portion of the West which is nearer the Pacific Ocean must be sought in the contrary direction.

Fortunately, it would appear that the natural markets and the natural outlet are in harmony. From all accounts, Japan and China are rapidly becoming consumers of bread. Japan has lately been calling loudly for Canadian flour. What more natural then than for the great new grain fields of Alberta to ship their produce through the western gateway of the Pacific, Vancouver, and through any other port created by the Grand Trunk Pacific! Haulage would be saved, a profitable market would be developed, and great Canadian ports would be built up on the Pacific seaboard. This is a side of the matter which is now being urgently brought to the attention of the National Transportation Commission by the Calgary Board of Trade, and other important bodies in Alberta and British Columbia.

Another question, which has been taken up more particularly by the Edmonton board, is the improvement of navigation on the Saskatchewan River, which undoubtedly would be of great benefit to the enormous agricultural country passed through by it. And still another matter, the importance of which to the growth of the West can hardly be exaggerated, is the finding of a route to Europe by way of Hudson's Bay. If feasible, such a course would be the means of saving hundreds of miles, not only compared with other Canadian routes, but with those in the United States as well. The importance of this latter point is such as can be readily understood.

* * *

THE HARDWARE TRADE.

The hardware trade may be said to be in good shape, judging from reports by wholesale dealers in Ontario and Quebec. There is some complaint as to slackness in payments from the North-West, but hardly so much so as in the case with some other lines of merchandise. The excellent crops in the prairie country as well as in Ontario, have given retail merchants cause to face the future with renewed light hearts, and the consequence is seen in the disposition to send in good sized orders for all lines of seasonable articles.

Among the most prominent features of the trade at present is the heavy call for builders' hardware, due, we suppose, to the desire to make such headway as possible in building houses before the close both of navigation and of constructive operations. Nails, screws, bolts, nuts, hinges, cement, are all in active demand. Of window glass the same may be said, but recent heavy advances in price caused a slight falling off. Sporting goods are also in demand.

perhaps more than usually so even considering the season. Loaded cartridges have been somewhat slow in delivery, but guns and other ammunition have been going forward in large quantities. Fishing appliances are also in good request. Wire nails have gone up in price across the American line, but so far the rise has not been followed here. A rather extra volume of trade is being carried on in cutlery. There is some scarcity, it is said, in certain quarters, of cement, but the movement of this article was very heavy during the earlier part of the season. Its use in building operations is spreading fast.

The position of the heavy metals is quite strong, and high values generally prevail. Bar iron has already advanced considerably, while pig-iron, from what comes to hand in the way of advices from the factories, is ordered ahead for several weeks, and prices may become higher. Galvanized iron and black sheets are also quoted higher. There is a strong demand for both lead and copper. The position of the iron market in the United States is indicated by the following from The Iron Age:—

> While the largest producers of iron and steel have been preparing for some time for the heavy consumption, the buying movement has come somewhat earlier than they expected, and has been of surprising volume. As an indication of what has been happening we may note that the September sales of the United States Steel Corporation constituted a record, and have been double its capacity. The most interesting development of the past week has been the rush to buy furnace coke for 1906. A number of the large steel companies have closed very important contracts, and the pig iron makers generally have hastened to cover. The price has advanced to $2.55 to $2.65 at ovens for strictly Connellsville coke, which is about $1 above the price at which coke was sold in the spring. This means a very serious addition to the cost of production of pig iron, and accounts for the attitude which makers are assuming. They are putting up prices, and are chary of taking business beyond the first quarter of 1906. Then, too, the feeling is growing that speculative buying on the part of consumers, of which there are some indications, should be discouraged.

A report from Manchester, England, says:—

> About a month ago we were able to report a brisk demand for pig iron and the trade in general improving. Since then values have advanced steadily to the total extent of 3s. 6d., 2s. 6d., and 6s. 9d. per ton in Scotch iron, Cleveland iron, and hematite respectively. There is a general impression of good trade prospects, and large orders have recently been placed not only for near delivery, but also for delivery over the first half of next year. The demand continues strong, and prices tending further upwards.

* * *

THE FORESTRY CONVENTION.

We have referred in a previous number to the call which had been issued by Sir Wilfrid Laurier for every person interested in the highly important question of Canadian forestry to meet in convention in Ottawa in January next. The following is the text of the invitation, a copy of which, with Sir Wilfrid's signature attached, we have received with a good deal of pleasure:

Office of the Prime Minister of Canada.

Ottawa, 21st August, 1905.

To the Public of the Dominion of Canada:

Canada possesses one of the largest areas of virgin forest of any country in the world, and is ranked by European experts first, or among the first, of the important sources of the world's timber supply for the future.

The preservation of the streams in perennial and constant flow, which is largely controlled by the forests on the watersheds, will have an important influence on the industrial and agricultural development of the Dominion. The expansion of our electrical and mechanical industries will be regulated to a great extent by water, which forms the greatest source of power in all countries; and some of our Western districts are dependent on irrigation to ensure the success of agricultural operations.

In all the older Provinces the clearing of the soil has been carried to such an extent that the ill effects on the water supply and on agriculture are clearly marked, while on the Western prairies the need of sheltering trees for houses and fields is seriously felt by the settlers.

The early construction of the Transcontinental Railway, and of other railways, through our northern forested districts, and the consequent opening of those districts to general traffic, will increase the danger from fire which has already been a most active agent of destruction.

These conditions are not new; they have from time to time received public attention, and during the session just closed Parliament authorized the summoning of a convention for the more thorough discussion of the same.

I therefore hereby call a public convention to meet in the city of Ottawa on the 10th, 11th and 12th of January, 1906, under the auspices of the Canadian Forestry Association, and to this convention are specially invited: Members of the Senate and House of Commons; Lieutenant-Governors of the Provinces; members of Legislative Councils and Legislative Assemblies of the Provinces; Dominion and Provincial forest officials; members of the Canadian Forestry Association; representatives of lumbermen's associations; representatives of boards of trade; representatives of universities; representatives of agricultural colleges; representatives of farmers' institutes; representatives of railway companies; representatives of the Canadian Mining Institute; representatives of the Canadian Society of Civil Engineers; representatives of associations of land surveyors; representatives of fish and game associations, and all others who take an interest in forestry.

An invitation is also extended to the Bureau of Forestry of the United States, the American Forestry Association and the state forestry bureaus and associations to send representatives to this convention.

(Signed), WILFRID LAURIER.

The convention, the date of which is 10th, 11th, and 12th January, 1906, will be composed of: Lieutenant Governors of the Provinces; members of the Senate and the House of Commons; members of the Legislative Councils and Legislative Assemblies of the Provinces; Dominion and Provincial Forest officials; members of the Canadian Forestry Association; representatives of lumbermen's associations, of boards of trade, railway companies, universities, agricultural colleges, farmers' institutes, the Canadian Society of Civil Engineers, the Canadian Mining Institute, associations of land surveyors, fish and game associations, the Bureau of Forestry of the United States, the American Forestry Association, state forestry bureaus and associations, and all others who are interested in forestry.

The subjects to be considered will be discussed under the following divisions: The Nation and the Forest; Forestry in relation to Agriculture and Irrigation; the Forest and the Lumber and Pulp Industries; the Relation of our Forests to our other Industries; Railways; Water Powers; Mining; Building Trades; Wood Working Manufactures; Scientific Forestry and Forestry Education.

We note that by the kindness of the Canadian railway companies a single fare rate over their roads on the certificate plan is likely to be allowed delegates, regardless of the number in attendance, while in regard to rates on railways in the United States, announcement will be made later.

The secretary of the Association, who has all arrangements under charge, is Mr. R. H. Campbell, Department of Interior, Ottawa, who will be glad to give any information desired.

* * *

PRICES OF COMMODITIES.

The London Economist's Index Number, showing the average movement in values of a number of the principal commodities, now stands at 2,219 as compared with 2,163 three months ago, and 2,136 at the end of last year. The wide distribution of the movement and the fact that it has occurred principally through an enhanced demand for raw materials, which in turn indicates brisk trade in the finished articles, would appear to indicate considerable improvement in general conditions in the British Isles.

The last three months have been a period of more than usual interest in the iron market. It will be remembered that the pig-iron warrant market was subjected to a "corner," which came to an end in May last, leaving the manipulators with a heavy stock of warrant iron to carry. This they seem to have been well able to do, since it has further increased during the three months, while at the same time the price has advanced, and is probably somewhere about the average level at which the accumulated stock was purchased. Prices of finished iron and steel have been very firm, while lead, tin and copper, though not quite so high as at one time during the quarter, are all still quite high priced.

Practically all textile commodities are high in value. Cotton has been steadier than for some time, though there have been rumors of further attempts to corner the market. Wool is in inadequate supply, but the sources of supply are, perhaps, too numerous to admit of much manipulation.

Food supplies have in some cases shown a lowering tendency, which, in the decrease of cost of living, has been of considerable advantage to the manufacturing interests. Wheat, for example, has made a notable decline since July. Meat has kept steady. Sugar has fallen heavily. Tea has advanced, but as the duty has recently been reduced in England, this should not hurt consumers materially. Petroleum has gone up.

* * *

WAGES IN CANADA AND THE UNITED STATES.

An interesting section of the third volume of the census of 1901, is that in which is made a comparison between the cost of manufacture in Canada and the United States. The conclusion is that in respect to wages, materials, and miscellaneous expenses, the Canadian manufacturer has the advantage, the average ratio for all industries being $84.07 in Canada, and $85.35 in the United States. That is to say, for every $100 value of product, the cost for wages, materials, and miscellaneous expenses is $84.07 in Canada, and $85.35 in the United States. The average wage for all industries would appear to indicate an advantage for the Canadian manufacturer, its cost to him being $148.64 less per employee than the American manufacturer has to pay. Of course, as Mr. Archibald Blue, the Census Commissioner, admits, this question is deserving of more investigation, cheap labor not being always a pure advantage. It may be due to a lower standard of living in one country than the other, or to less efficiency of the labor, or the larger supply of that labor, or to a narrower margin of profit owing to more circumscribed production. However this may be, it is worthy of note that the ratio of wages to value of products is 2.58 per cent. less in the United States than it is in Canada. At the same time the ratio of capital to value of product is $75.50 in the United States against $92.90 in Canada, which shows the advantage of the large capital and the high state of organization possessed by United States industries.

The figures show that the total capital employed in 14,650 manufacturing industries in the Dominion is $446,916,487, a little more than half of which is represented by working capital, and the balance by lands, buildings, machinery, and motive power, tools, implements, etc. The number of employees of all classes is, according to the census, 344,035. We were prepared to find it even larger; but this is a very respectable figure for the industrial army of the Dominion to reach.

* * *

EAT MORE FISH.

Vast stores of some of the finest fish in the world are to be found off both the eastern and the western coasts of Canada. Yet Canadians, taken as a whole, are far from being great fish eaters. Not that they do not like such a diet, which indeed, on the score of healthfulness, is not easily surpassed; but simply that they have not been educated to a taste for the toothsome morsels of the deep, which Providence has placed near their portals. It is true that large quantities of fresh fish from the lakes are consumed annually, and the idea has, perhaps, been formed that this is superior to that which has been taken out of salt-water, an opinion which the best qualified people consider a delusion. But whether fresh or salt, domestic or imported, the value of fish as an article of diet should be better known. In rheumatic cases and in nervous affections the instruction is common from up-to-date medical men to their patients: "Give up eating meat three times a day: eat fish, eat fruit, eat eggs." And the advice is sensible. Many a business man has been improved in health and spirits, whether he knew it or not, by acquiring the habit temporarily while at the sea-side, or holidaying in Muskoka or other lake districts, of eating fish more regularly than he does at home.

From the point of view of those who employ themselves in examining the main sources of economic food production, this neglect by Canadians, that is by those living in the central and western regions, of such an important addition to diet as fish, is lamented, and some of them have from time to time taken pains to point out the error.

The Dominion Government has also tried during the last year or two to see wherein improvements might be effected in the historic industry of catching fish. A few months ago, for example, a Scotch steamer was brought across the Atlantic to develop the "steam-drifting" business along our eastern coast. An expert also came out, at the invitation of our Government, to introduce into Canada the methods which have been in such successful use in Scotland. These efforts have already been attended with good results.

Another Government experiment which is being watched with interest is the salmon pond near St. John, N.B. The impounded fish, before being released, are tagged with a date, the object being to discover whether the fish return to their old spawning grounds a second season. A number of four-pound fish also have been marked with their weight, with a view to ascertaining their rate of growth, that is to say, provided they be caught again.

All these and other researches are in the right direction, for they help to make perpetual a source of great natural wealth to the Dominion—a source of wealth which might be made much greater than it is at present, if only a really large demand could be created for salt-water fish on the part of our people. For that is the trouble. The consumption of this article is diminished owing to the high prices, but the prices are high largely because there is an insufficient demand from Ontario and other inland parts of the Dominion to allow of freight rates, etc., being reduced. And thus it comes about that one of the best, cheapest, and most wholesome classes of diet is in a measure unknown to a large proportion of the population.

* * *

FIRE INSURANCE AND CREDIT.

In our mercantile summary columns to-day is the story of a man in a remote part of Quebec Province, who, being a merchant and buying on credit, had insured his stock and premises for only half their worth. His place took fire last month, when something like twenty thousand dollars went sky-ward in smoke and flame. He had insurance on only half this amount, and now he is applying to his creditors to let him off with half the amount of their claims. Such logic does not convince, does not deserve to convince; and creditors ought not to be expected to lose half of what this man owes them because of his negligence or parsimony. If he were a rich man, and could afford to take his own risk of fire for $20,000, that is one thing. But it is quite another thing if, in consequence of the loss of $10,000 he is compelled to ask his creditors to compromise with him. He is a short-sighted merchant, and a poor-spirited one.

Another case we heard of, only yesterday, is that of a lumber merchant in an Ontario town. His stock of lumber (for he was a retailer) ranged in value from $12,000 at one season of the year to $25,000 or $30,000 at another, and he had been known to keep insurances of $15,000 to $20,000 on his piles. He appears never before to have suffered by fire, but this year a fire swept his yard, and he lost perhaps twenty thousand dollars. During 1905, we are told, he had allowed policy after policy to lapse, until at the time of the fire he held only one fire policy, namely, in an English company, for $5,000. And this $5,000 is practically the only cash asset he has to recommence with. We are not told how much he owes, nor what arrangement he proposes with creditors. If he does not owe what he cannot pay, and so does not need to try and make others suffer for his negligence, or for his trying to economize in fire premiums, he is fortunate. If he does, his slackness and wrong-headed attempt at "economy" will stand in his way if he attempts to compromise. For no merchant deals fairly with those from whom he buys, if, having little or no means of his own, he seeks to make a livelihood by their crediting him, while he makes no adequate effort to provide indemnity in case of fire for them and himself.

* * *

SEPTEMBER FIRE LOSS.

Some reduction is shown in the fire loss for the month of September this year compared with last, the figures being $13,715,250 and $14,387,650 respectively. The following shows the losses in summarized form for the first nine months of the years 1903, 1904, and 1905:—

	1903.	1904.	1905.
January ...	$13,166,350	$21,970,200	$16,378,100
February ..	16,090,000	90,051,000	25,591,000
March	9,907,650	11,212,150	14,751,400
April	13,549,000	23,623,000	11,901,350
May	16,366,800	15,221,400	12,736,250
June	14,648,350	10,646,700	11,789,800
July	12,838,600	11,923,200	13,173,250
August	8,428,350	9,715,200	11,435,600
September .	9,939,450	14,387,650	13,715,250
Total 9 mos.	$114,971,500	$208,560,500	$131,436,000

The Journal of Commerce and Commercial Bulletin, of New York, from which we take these figures, states that the Pacific Coast shows up very expensively in the September list of fires, the largest loss being in that section. The Baltimore fire occurred in February, 1904, and is charged as $70,000,000 loss. If this be deducted from the 1904 nine months' total the remainder would still be in excess of the figures for the first nine months of 1905.

* * *

LIFE ASSURANCE MANAGEMENT IN THE STATES.

The revelations made before the committee which is investigating the affairs of life assurance companies in the United States of America continue to afford room for reflection and food for indignant remonstrance. The array of names of highly salaried officers—$10,000; $20,000; $40,000; $100,000 *a year* each—many of whom are found to be relatives or marriage connections of the president of several of the large companies, is causing the strongest disapprobation. And so it should. Such heavy and unjustifiable drafts as these upon the income of the companies are simply a drain upon the policyholders. And the policyholders have the strongest right to object to seeing money which should be returned to them, or added to the faces of their policies by way of profits, frittered away by payments of what cannot but be considered exorbitant sums to a favored few in salaries and commissions.

Publication of the facts has elicited scathing criticism of the methods pursued in handling the enormous accumulations of these great companies. It has also brought out, here and there, comment more bitter than sensible of the system of life assurance; while at the same time it has given color to the contention that these companies have been charging too much premium, since they can make such huge accumulations. But it is important to observe that there has not been any question of the solvency of the companies; the fact of their extravagance in management does not imply any doubt of their sufficiency to meet their important obligations. We think it well to give some expressions upon the matter from a few of the weightiest organs of public opinion. For example, the Morning Post, of London, England, says editorially respecting the disclosures before the committee:—

> Englishmen have been profoundly shocked by the discovery that these international corporations have been used in the interest of Wall Street coteries, and that some of the most distinguished representatives of American commerce, finance and public life have allowed themselves, and have been allowed, to treat the premiums of millions of policyholders as a means of private gain. Americans can scarcely be surprised to learn that the confidence of Europe in their business integrity has been staggered by the multiplying proofs of so much laxity and wrong-doing, or that public opinion on this side of the Atlantic judges the moral obliqueness which the Frick committee imputed to some officials of the Equitable Life Assurance Society far more harshly than it judged the Panama scandal, for example, or than it would judge similar lapses from the strict code of honesty on the part of directors of some purely industrial concern.
>
> Life insurance companies are commonly regarded as a form of savings bank. The vaster they are, the less able are the policyholders to superintend their workings and the greater becomes the moral and material responsibility of their directors. If these directors prove faithless to their trust they deal a blow of peculiar effectiveness at business ethics and habits of national self-denial. The opinion that expects from them more careful, more impersonal management than it would expect from the directors of an ordinary commercial company is, on the whole, sound opinion.
>
> Where the proportion of cost to income in industrial insurance is 7 per cent. in Germany and 40 in Great Britain, in the United States it is 48. Where the proportion of expenses of management to income in ordinary life insurance is slightly over 9 per cent. in Great Britain, it is more than 17 in America. Not until the Federal Government grants licenses to insurance companies and appoints Federal officials to supervise their working will it be possible for policyholders, either in America or Europe, to feel any approach to security.

And the Bankers' Magazine, of New York, says in its October issue:—

> The insurance investigation in New York has attracted a great deal of attention in financial circles, particularly the revelations showing the relations existing between the insurance companies on the one hand and the banks and trust companies on the other. While the fact has been brought out that the banks and trust companies owned or controlled by the insurance companies may render the latter valuable legitimate service, it has also been made to appear that they render a service which the insurance companies ought not to require, and that the banks and trust companies should not perform. It is one thing for a trust company to employ its machinery in the legitimate purchase of high-class investments for the parent insurance company; but it is quite another thing for the trust company to be made use of to take over and carry assets of a character that the insurance company does not wish to appear in its balance sheet.
>
> Some of the facts brought to light show a regrettable lack of the finer and higher sense of appreciation of the duties and responsibilities of trusteeship on the part of those charged with the handling of the vast funds entrusted to the life insurance companies.
>
> The accumulation of enormous sums of money in the hands of life insurance companies and savings banks is bound to give rise to serious problems when this money comes to be invested. For many years the Legislature of New York has been under pressure from interests that desired to sell securities to the savings banks, and it was only quite recently that a general investment law was passed which will, it is believed, put a stop to the scandals possible under the former order of things. Perhaps the law relating to the handling of insurance funds could be so modified as to prevent the recurrence of conditions like those which have lately been the subject of so much unfavorable comment.
>
> Absolute control over several hundred millions of dollars is a tremendous power to be lodged in the hands of one man. To avoid mistakes in the management of so large a fund would imply almost superhuman wisdom, and perhaps it would also require superhuman virtue to administer such a trust without being in some measure influenced, directly or indirectly, by considerations other than those which should obtain. Too much money, like too much honor, is a burden rather heavy for a man who hopes for heaven.
>
> If the investigation of the insurance companies shall result in checking their growth for a time, it will probably be of great benefit to the policyholders. There has been, unquestionably, too much racing for big totals; and the present problem would seem to be not how to get more business, but how to take better care of that already in hand.
>
> Notwithstanding the conspicuous faults in insurance management which have been brought to the surface by the investigation of the Legislative Committee, it is at least well to bear in mind that the solvency of none of the companies appears to be in doubt. Their investments, upon the whole, are of a very high character. It is, of course, deplorable that such an investigation has been rendered necessary; but its results can hardly fail to aid in clearing up the financial atmosphere.

* * *

—Judge F. A. Smith, of the Chicago Appellate Court, hit the nail on the head when he declared the other day that there is no such thing as peaceful, polite, and gentlemanly picketing. The statement was made in deciding against Franklin Union Press Feeders, and three of its members who had been fined $100 each, and sentenced to thirty days' imprisonment for violating an injunction secured by the Chicago Typothetæ, prohibiting interference with employees. "There is no such thing as peaceful, polite, and gentlemanly picketing," said the judge, "no more than there can be chaste, polite and gentlemanly vulgarity, or peaceful mobbing or lawful lynching."

AMERICAN BANKERS' ASSOCIATION.

Thirty-first Annual Meeting.

This is the week of the American Bankers' Association annual convention. It began nominally on Tuesday at the New National Theatre in Washington, and closes to-day. The first day's business was on Wednesday, when addresses of welcome were made by the president of commissioners of the District of Columbia; by John Joy Edson, president of the District Association of Bankers, and by a representative of the Federal Government, the reply to these being made by Mr. E. F. Swinney, president of the American Bankers. Very elaborate preparations had been made by the Washington bankers, who organized reception committees, banquet committees, and all sorts of committees to see that the visitors and their accompanying ladies had "a good time." The banquet at the New Willard Hotel on Tuesday night must, from the descriptions given, have been a memorable occasion. The arrangement for it is thus described for us by a New York reporter:

> "The banquet will be unique in many features. The tables will be set to form a dollar mark. The menu will be in the form of a bond, with each course attached in the form of a coupon. The committee searched the country for a form of bond that could be used without infringing on the legal rights of various corporations, and finally secured what it wanted. The dinner souvenirs will be handsomely engraved coupon clippers. There will be no set speeches at the dinner; in fact, it is possible that there will be but one speech during the evening. Secretary Shaw will probably make a short address at the close of the dinner."

After reports of committees of the Association and an address from Mr. Frank A. Vanderlip, of New York, a paper was submitted (we now quote from the programme as furnished by the Bankers' Magazine for October) by Hon. W. B. Ridgely, Comptroller of the Currency, on "The Examination of Banks." A committee on nominations for membership was then chosen, by States. The subjects of discussion for the second day (Thursday) were "Commercial Education," introduced by Professor Joseph F. Johnson, of New York University School; "The Scotch System of Banking," by Robert Blyth, of Glasgow, general manager of the Union Bank of Scotland, Limited; "Practical Benefits of Membership in the Association," by Walker Hill, of St. Louis. On Friday the topics for papers were: one on "Our Commerce," by Harvey D. Goulder, of Cleveland, who would doubtless afford the bankers of the United States information and statistics of the traffic and the great ships of the American lakes that would fairly astonish those who do not live in the Northern or Northwestern States and are strangers to their shipping. Then a presumably important deliverance from the Secretary of the United States Treasury, Hon. Leslie M. Shaw. This appears to conclude the business sittings of the whole body, but various committees had to meet. There were, on separate floors, meetings of the Savings Bank Section of the Association with papers, addresses and debates, and of the Trust Company section, both on the 10th. Receptions, excursions, and entrées to the beauties of Washington were provided in the most lavish manner, and the occasion was one long to be remembered by its participants.

We are able to give a few extracts in another part of the paper from the addresses made on the United States banking system and existing conditions in that country.

* * *

A DELUSIVE ARGUMENT.

There has appeared several times within the past week or two in various city journals a prospectus of the Sovereign Fire Insurance Company of Canada, authorized capital $2,000,000, and various puffs of it have appeared. From the circumstance that the provisional directors are largely the same as those of the Sovereign Life Company, and that its head office is at the same place, the inference has been drawn that Mr. Addison H. Hoover is to be the manager of the company when it is organized and gets into working order. This may or may not be, but it is our business at the present moment to see what this prospectus says to the public, whom it asks to pay 25 per cent. premium for the privilege of possessing $250,000 stock in the proposed company. The idea conveyed is that there are too many foreign and British companies in the fire field and not enough of native ones. Hence, they say, the "necessity for a sound, substantial corporation, the shareholders and policyholders of which would be protected by a large cash capital paid up in full . . . and a strong directorate of business men, who would conserve these resources," and so on. So far, good; and there need be no objection to any one who has plenty of money, and who feels like it, putting it into fire insurance shares—though we would remind him that he has no need to pay a premium of twenty-five per cent. or any other amount upon them, since there are a number of Canadian companies whose shares can be procured at a decided discount at this very moment. What we object to, however, is the next paragraph, headed "Profits of Fire Assurance Companies." It is there set out that British joint stock fire companies are paying great dividends; that United States fire companies are paying good dividends; that Canadian companies were able to pay dividends in former years, and that now, with premium rates so much higher, "the business is fixed upon a substantial basis, and the profitableness of the future is unquestionably assured." Surely a more misleading paragraph was never penned. If we can conceive any man, looking for an investment, who is not informed about the losses of Canadian fire companies and the quotations for their stock at either private or public sale to-day, the reading of this paragraph might induce him to risk his money under a great misapprehension. Canadian companies have notoriously been losing money. The accumulations of British companies, made in other lands and times (which are such a blessing when conflagrations come and hundreds of thousands of pounds sterling are sliced off them by the fire-fiend) were not formed from any business they did in Canada; and the writer of the prospectus, quoting so boldly from the Superintendent's report, does not dare to quote from that official's remarks and table on page xii. of the millions lost by the companies at Ottawa, Hull and Toronto. And whatever the writer means by the business [of fire insurance] being "now fixed upon a substantial basis," it is certainly not true, as his concluding sentence avers that "the profitableness of the future is unquestionably assured."

* * *

DEATH OF MR. ST. CLAIR BALFOUR.

On Sunday last death suddenly and unexpectedly took off one of the most esteemed of Hamilton's merchants, Mr. St. Clair Balfour, who had just entered his fifty-sixth year, and might have been supposed to have many years of business activity before him. An unpretending man, Mr. Balfour was yet of good metal: sound in his principles, able in his business, of warm heart and ready impulses for the help of others, he was a good citizen and a delightful companion. Many, indeed, will miss his cheeriness, not only in Hamilton, but in other cities and towns.

Mr. Balfour was a native of Kirkwall, Scotland, where he was born in 1850. As a youth he lived in Glasgow, and at the age of about twenty came to Canada, and settled in Hamilton, entering the employ of A. Murray & Co., dry goods, but shortly afterward going to the wholesale grocery house of Brown & Gillespie as book-keeper. He remained with the firm when its style became Brown, Routh & Co., and then shortly afterwards became a partner with Mr. Adam Brown in the firm of Brown, Balfour & Co. On the retirement of Mr. Brown, Mr. Balfour became head of the firm of Balfour & Co., and continued to be such until his death.

* * *

FINANCIAL ITEMS.

The profits of the Dominion Iron and Steel Company for the five months ending May 31st last, which date now represents the end of the company's fiscal year, are stated at $366,062, besides $4,796 in rents. From this sum was paid $164,083, interest on first mortgage bonds, $30,779 on second mortgage bonds, $81,048 interest on floating debt, and $23,416 to sinking fund on first bonds, leaving a profit of $72,532 to reducing the debit of profit and loss account on May 31st to $1,021,708. This debit had been increased during 1904 by $643,000, when profits on sales were $124,755, compared with the $366,062 for this year's five months. The profits include bounties paid. Since May 31st the rail mill has begun operations, and the directors reported that the company's output will be increased at an early date by a third blast furnace being brought into operation, while the tonnage of steel will, it is hoped, be enlarged by the improvements in the open hearth department. The liabilities May 31st included bills payable, $2,873,222. The assets included $1,780,534 in cash, materials, product, etc., and $528,818 on special deposit. The annual charges are interest and sinking fund, first mortgage bonds, $450,000; interest on second mortgage bonds, after October 1, 1905 (lessening annually), $135,000; redemption of second mortgage bonds, 10 per cent. annually, $250,000. Total, $835,000.

The Canadian weekly bank clearings have been unusually large of late. In a period of ten weeks the aggregate clearings of our eleven clearing houses averaged 19 per cent. higher than in the corresponding weeks of 1904, ranging as they did from $55,000,000 to $66,000,000 weekly, and culminating at $76,419,000 in the week ended October 5th. One has to go back to 1st December, 1904, to find a parallel for this, the clearings in that week having been $77,054,000, and on the 20th November that year $75,727,000 —but these were quite exceptional amounts for 1904.

The bank clearings were last week unusually heavy on both sides of the line. In some southern cities of the Union, it is true, there have been slightly lower figures than at the like date of the previous year, but the exchanges at all leading centres in the Middle, East and West show an increase, total exchanges for the week at all leading cities in the United States being $2,798,360,856, a gain of 22.5 per cent. over the corresponding week last year. Average daily bank exchanges in the States for the year to date are compared below for three years:

	1905.	1904.	1903.
October	$494,233,000	$403,650,000	$334,375,000
September	398,354,000	322,135,000	217,736,000
August	371,651,000	270,154,000	278,807,000
July	398,705,000	317,720,000	344,982,000

Since writing what appears elsewhere about the American Bankers' Convention, with more than three thousand present, we get in yesterday's despatches some glimpses of the proceedings of Wednesday: Mr. Frank A. Vanderlip, former assistant secretary of the United States Treasury, said he believed the ease with which the financial world withstood the strain of a war which cost the combatant nations two billions of dollars was due to the greatly-increased production of gold in recent years. To this increased production he also gave the credit for the recovery from industrial depression during the past three years. At the same time he expressed the belief that in this very increase there was a possible future disturbance of values. He spoke of dangers which lurk in the situation in the United States. "Among those which we know exist comes first our illogical and unscientific currency system. We know that this system may at any time breed us trouble. Indeed, it is when other conditions are most favorable that the danger is greatest. A strain is on our currency system, and we know that we are threatened by great social disorders." Mr. Secretary Shaw used very plain language about the defects of the United States system of banking. Upon the conclusion of his address, in which he gave a graphic picture of the prosperity of the country, contrasted with a monetary system which is inflexible, and liable thereby to bring disaster at any crucial time, he was loudly applauded by his auditory. Mr. Shaw suggested as a remedy a heavily-taxed national bank note currency, which would be drawn forth at times of unusual demand for money, and by reason of the tax be retired immediately upon changed conditions.

* * *

—We hear that Mr. F. A. Conroy, treaty commissioner to the Indians in the Far North, has returned to Edmonton with a good account of the agricultural prospects of the Peace River district. He says that early in June he saw wheat seven and eight inches high, and the harvest, he believes, was completed by August 17th. He also tells us tomatoes were ripening on the vines in the open at Wabiscaw on September 2nd.

DRY GOODS NOTES.

M. Savaria, of Waterloo, Que., is asking that town for a bonus of $30,000 to assist in enlarging his knitting factory.

The Clinton Knitting Company has been granted by the Ontario Government a charter authorizing it to make and sell hosiery, knitted goods and yarns at the town of Clinton. Among the provisional directors are Samuel Owen, of New York, and H. B. Combe, of Clinton.

It seems a pity that the British Cotton Growers' Association, a body from which so much was expected in the way of finding a means of finding a more regular source of cotton supply than that furnished, under present schemes of manipulation, by the Southern States, has not been more successful in raising the capital necessary for the carrying out of its plans. Commercial Intelligence says the future of the British cotton manufacturing industry practically turns upon the success of efforts to secure supplies of cotton from wider sources, and is of the opinion that the Colonial Office should come to the rescue in a cause so inseparable from national prosperity in the future.

* * *

FOR GROCERS AND PROVISION DEALERS.

The steamship "Keemun" sailed last week from Vancouver with 3,800 tons of salmon for the Orient. She also took out about 40,000 feet of lumber, consigned to China.

The cheese factory at North Smith, near Lakefield, Ont., has been destroyed by fire, together with about $1,000 worth of cheese. Loss was estimated at about $4,000, partly covered by insurance.

It is stated in a cable from London that the Puget Sound salmon canners have cut prices on one-pound tall cans of sockeyes by 5s., causing great confusion among British buyers. The Vancouver packers are described as being uneasy.

The Keewatin Flour Milling Company has placed a contract with the Allis-Chalmers-Bullock Company, Limited, of Montreal, for the erection of machinery for the former's large flour mill at Keewatin. It will cost about $225,000. Power will be derived from the Lake of the Woods. The mill building and elevator are already under construction.

The steamer "Bellona" made a good run from Gibraltar to Montreal, arriving at the latter port on Tuesday, and she is now discharging a cargo consisting of 89,743 half-boxes of Valencia raisins, 1,902 quarters and 5,175 eighths. From Patras she brings 1,345 cases of currants, 19,695 halves, 850 quarters and 25 barrels. From Malaga she brings 4,750 boxes, 386 quarter boxes, 1,039 cases, and 417 bundles of raisins, 1,185 boxes of shelled almonds, 1,200 frails of figs, besides grapes, onions, etc., from other Mediterranean ports.

* * *

—The Dominion Government's surplus for the last fiscal year turns out to have been $7,871,320, compared with Hon. Mr. Fielding's estimated surplus of about $9,000,000. The revenue reached $71,180,626,, or approximately half a million greater than the amount collected the year before. The expenditure during the year was $63,309,305, compared with $55,612,832 in the year previous, while the expenditure on capital account was $15,441,403, or $4,392,200 more than in the year previous. The debt is increased $5,349,113, against the estimate of $1,250,000. The Customs revenue of the Dominion showed an increase of $731,037, of the Post-office an increase of $473,047, of Public Works an increase of $422,123. Excise collections declined to the extent of $372,233, and the miscellaneous account declined $743,166. The principal items of increase in expenditure on capital account are public works, railways and canals. The canals show $9,840,028, an increase of $4,007,075; bounties, $2,234,685, an increase of $1,104,643. For railway subsidies the amount paid was $1,275,629, or $771,248 less than in the year previous.

—It is interesting to notice the quantity of Canadian fruit from the Niagara District that comes to Toronto. In one month, September last, the total received by rail and water was 1,373 tons. Translated into pounds, this means not far from three million pounds. Of the total, 628 tons came by boat and 745 tons, or 87,566 packages, by train. Of these receipts and of fruit previously stored in Toronto eighty-nine carloads, or 1,135 tons, were shipped out by the wholesale houses to the Provincial trade. This fruit consisted of grapes, peaches, plums, and apples, the heaviest item among the lot being peaches.

* * *

—"This has been the dullest week of the season in fire insurance circles," was the reply of a Toronto agent to an enquiry about the condition of business. The lumber-cut is small this year, and so we are not getting the risks we are accustomed to look for from the lumbermen at this time. And then the Western grain is not moving in any great quantity yet. My experience in this respect seems to be general among the offices. But we are not discouraged by the general position or outlook. Canadian losses have not been excessive, although the general fire loss figures for this continent did not make a good showing in September. We shall have a fairly good year if fires grow no worse from now forward to the new year.

* * *

—Mr. J. Henniker Heaton, a member of the British Parliament, makes a powerful plea in a recent issue of the Times for universal penny postage. The present postage rate, he claims, is excessive, and is a serious handicap on commerce, "an embargo on neighborly amenities, and an impediment to free intercourse between the Mother Country and her sons and daughters over the sea. He claims there is an absolute certainty that within three or four years the several Governments would be receiving quite as satisfactory returns from foreign postage as they do now, owing to the development of correspondence under the lower rate. Mr. Heaton submits a long list of prominent men of all classes who have enrolled themselves as members of a universal penny postage league.

* * *

—The establishment of the direct steamship line from Canada to South Africa two or three years ago has resulted in a considerable development of trade between the two countries, says Mr. C. Kittson, Canadian commercial agent at Cape Town the following figures illustrating this: In 1896 the total of the Canadian sales in South Africa amounted to £17,963. In 1902 the value of Canadian exports had increased to £299,674. Last year the total had reached £1,907,962. Mr. Kittson says the Cape colonists are not yet able to produce enough cereals to supply the wants of the population, and this year flour, meal, etc., will be imported to the value of four million dollars. Australia is endeavoring to capture this trade from the United States, and Mr. Kittson thinks the Canadian producer should also be a little more active.

* * *

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ended with Thursday, October 12th, 1905, as compared with those of the previous week:

	Oct. 12.	Oct. 5.
Montreal	$31,031,868	$30,130,530
Toronto	23,929,081	24,337,256
Winnipeg	10,288,067	8,850,664
Halifax	1,859,261	1,820,312
Hamilton	1,528,900	1,584,759
St. John	1,149,480	1,073,947
Vancouver	1,776,274	2,120,744
Victoria	797,207	660,380
Quebec	1,617,962	1,862,416
Ottawa	2,347,936	2,827,430
London	994,720	1,150,944
Total	$77,320,756	$76,419,382

The Dominion Atlantic Railway took possession on Saturday night last of the Midland Railway running from Truro to Windsor, Nova Scotia, connecting with the D. A. R. System at the latter town. The purchase of this road was completed several months ago, but the actual change was not made until now. The acquisition of this road gives the Dominion Atlantic direct communication between the western counties and the centre of Nova Scotia. The Dominion Atlantic have now three hundred miles of railway, and have their steamship service from Yarmouth to Boston and New York.

The Montreal firm of Markus & Sisinwain, wholesalers of woolens, trimmings, etc., and also manufacturers of umbrellas under the style of the Standard Umbrella Co., have made an abandonment of their estate, on demand, and a meeting of their creditors is ordered by the Court for the purpose of appointing a curator. The list of creditors is a very long one, numbering some 110 in all, comprising about 25 European firms, some of whom are interested for fairly large amounts. Their direct indebtedness is figured at from $85,000 to $90,000, with indirect liabilities of $40,000. A considerable proportion of the stock is said to be under advance, and the estate is expected to pan out poorly.

OUR AUSTRALIAN LETTER.

The new customs regulation, referred to in my last letter on freight charges on merchandise, has worked out rather differently to what was expected of it. The regulation reads as follows:

"F.O.B. Value.—On and after August 1st provisions section 154, paragraph A, Customs Act, are to be strictly complied with in regard to assessment of value of goods for duty; the following charges are to be included in estimating free on board value, namely, cost of labor and materials (except outside packages) used in packing, and all cost of conveying goods from place of sale and placing them on board ship, except the following charges, which must be included: Stamp duty, including that on bills of lading; also buying commission and brokerage.

"The value for duty of goods forwarded, e.g., from Montreal, in Canada, overland to New York for shipment at the latter port is to be taken as f.o.b. at the Canadian frontier."

It is the application of the last paragraph by American importers which has surprised the local Customs officials, and given them a clearer idea of the geography of North America than they ever had before. A large quantity of American goods, such as typewriters, computing scales, cash registers, etc., are shipped to Australia by the Canadian Pacific Railway and the port of Vancouver. In many cases the goods are manufactured in the Eastern States, and if the value was reckoned at Vancouver the amount of duty would be a fair increase on the duty reckoned on the value at Dayton, O., Pittsburg, Pennsylvania, or other point of manufacture. But the American importer naturally makes his entry with cost of freight to the place on the Canadian border where his goods crossed the line, whether that place was in Quebec, Ontario or farther west. The effect is, of course, to stimulate American shipments by the Canadian route to the disadvantage of the American lines and San Francisco boats. Unfortunately the arrangement does not work out quite so satisfactorily to the Canadian manufacturer. He finds the 'Frisco route is too expensive to be of use to him, and the difference of freight over Eastern-made goods to the United States border and to New York is a small item. It is expected that this loosely-worded regulation will be altered shortly.

From Fiji it is reported that the Vancouver Sugar Refining Company have recently purchased a large sugar mill and plantation with the object of controlling their own supply of raw sugar for their British Columbia refinery. Their plans include a large railway bridge, a substantial wharf and connecting railway line. The company have purchased in Sydney a hulk with capacity of 1,000 tons for storage and lightering. The enterprise will increase the importance of Fiji to the Canadian steamship line, and should indirectly lead to a large development in the Canadian exports to the islands of the Pacific.

The favorable prospects for the coming wheat harvest advised a few weeks ago are not quite confirmed by present indications, but farmers in the principal growing districts still look for a better than average crop. The wool crop is being cut, and an exceptional yield of high quality staple is assured.

Usual weather conditions in this country have been reversed of late, the coastal districts suffering for want of rain, while the interior, speaking generally, has had a good supply. As the coastal district is the seat of our dairying industries the production and export of butter is suffering.

Most of the minerals in which Australia is a producer are bringing high prices, and some expansion is expected as a result. The new Coppabella silver finds are attracting much attention, and the district is boomed as another Broken Hill, but reports go to show that while the surface prospects are most favorable, extensive shaft and tunnelling operations are needed to prove the value of the field.

F. W.

Sydney, Sept. 11, 1905.

OUR HALIFAX LETTER.

A proposal is on foot here to erect a memorial to Sir Samuel Cunard, the pioneer of Atlantic steam navigation, and a native of Halifax. Mr. E. L. Thorne, general manager of the Union Bank of Halifax, has been appointed treasurer for the Cunard Statue Fund, and subscription lists are about to be opened. Such a subscription might well be a national one, and the response should be liberal. Sir Samuel Cunard was one of the most sagacious, far-seeing business men this continent has produced, and one whose renown is well worthy of perpetuation.

The unusually heavy purchases of lambs in this Province lately is supposed to be due to an attempt of American speculators to corner the meat market, if such a thing is possible. There is a great scarcity of lambs on the United States market, and there have been a number of Americans, representing large firms, going through this Province buying all the lambs available at good prices. The supply here has been short owing to the great scarcity of feed last winter, and the market is now about bare.

The coast is infested with enormous shoals of dogfish, and the fishermen are devoting their time to the capture of the destructive pests. The dogfish reduction works at Canso are running night and day. Two members of the United States Fisheries Department have been spending some time inspecting the works and investigating the manner of coping with the dogfish pest. They are making exhaustive enquiries, and it is thought possible that some joint action may be taken by Canada and the States to rid Atlantic waters of the dogfish, which description of shore shark infests the Atlantic coast of the United States as well as Canada.

Judgment has been given in the Admiralty Court on the collision case between the steamers "Parisian" and "Albano." The collision took place off Chebucto Head last March. Mr. Justice McDonald places the whole blame on the "Albano," damages to be assessed later. Commander Finling, R.N.R., nautical adviser of the court, placed the responsibility on the "Parisian."

The Provincial Exhibition this year closed with a greater deficit than has been. The weather was unfavorable during nearly the whole eight days, and the attendance was "away off" in consequence. Next year, with a Dominion exhibition to finance and provide for, it is expected the deficit will be a startling one, and will result in the exhibition being held only every two years thereafter. At the present time the small county exhibitions are being held throughout the Province, and with the extremely beautiful weather which has prevailed for the past ten days have enjoyed a good deal of success.

College extension work is attracting a good deal of notice here at the present time. Both Dalhousie and King's have invaded Cape Breton to do work among the miners, and are taking up the work which has to a large extent been done in the past by American correspondence schools. The Dalhousie evening schools at Springhill, Cumberland county, and Stellarton, Pictou county, coal mines, were opened last week under most favorable circumstances, and the classes in Cape Breton have been going on for some time. The classes are supplementary to the Government mining and night schools, and cover such subjects as mining, metallurgy, chemistry, geology, mathematics, mechanics, etc.

The "Agnes Donohue," the Nova Scotia sealer, which, with her captain and crew, was seized in Buenos Ayres for alleged seal poaching, has been released after more than a year of effort, and has sailed for this port.

The eastern part of the Province is much elated over the great discovery of coal recently made at Stellarton. For a long time search has been made for the seam which had to be abandoned many years ago, when the Ford pit exploded and was inundated. At last it has been found. At a distance of over 1,200 feet a seam of magnificent coal, nearly forty feet thick, has been found, and the whole county of Pictou is rejoicing thereat.

HATS AND CAPS

The National Transcontinental Railway Commission met here last week, and at a meeting before the Board of Trade, representing the whole Province, the desires and recommendations of the Province were presented. It was urged that there should be no diversion of the route of the Grand Trunk Pacific to suit particular localities, but that the shortest and most direct route between Quebec and Moncton be chosen. Mr. George S. Campbell presented the case to the Commission. He said that Halifax and Nova Scotia make no sectional appeal, but are prepared to take their chance of traffic on the shortest and most direct route. Halifax had suffered once before by the divergence of the C.P.R., a route having been surveyed from McAdam Junction to a point on the Intercolonial, near Moncton, but it was never built. Every mile the route is shortened is of vital interest to this port, which, in relation to the rest of Canada, suffers from its geographical position. The Commissioners have gone hence to Sydney and Charlottetown.

The regular quarterly meeting of the Board of Trade was held on Tuesday. The membership continues to increase, and progress generally is reported. Owing to the efforts of the Board the following terminal improvements have been secured or are being prepared: Double track from Campbell Road to Deepwater, enlargement of the yard, erection of flour shed and pier.

The progress made with the steel shipbuilding proposition was explained at the board, and, as The Monetary Times has expressed a good deal of interest in this proposition, I detail results achieved thus far. In August representatives of the Boards of Halifax and Dartmouth, and also of the shipbuilding company, interviewed Finance Minister Fielding. He advised delay until next session, and suggested that in the meantime we should "fight on" and try to enthuse Western builders, and bring all our pressure to bear next session.

Halifax, 9th October.

IN THE OLD COUNTRY.

With the Canadian Manufacturers.

At Walsall the tourists had a really remarkable reception. It is the great saddlery town of England. The people lined the main street for a quarter mile and cheered the visitors, and the houses bore flags, while the drill hall, where a lunch for 400 was given, was a mass of flowers and flags and Chinese lanterns in such rich profusion as we had never seen before. This was the first place out of London where a visit had been arranged for us by the London Chamber, and the warmth of the inhabitants was excelled by that of none we subsequently met. Individual free passes were given us over the corporation tramways; and every member of the party received a copy of a most elaborate and beautiful leather-bound "programme" (of 124 pages), filled with facts and figures of Walsall and the countryside about, with many delicate photogravures and photographed inserts. The visits to factories here were numerous and instructive.

In Birmingham the arrangements were admirable, and, so far as one's observation went, carried out well. It was one's own fault if he were lonely, or in any respect at sea, for plenty of the citizens were ready and willing to show the visitors the many things of interest this famed town had to show. In the morning the C.M.A. delegates were welcomed at the council house by the Lord Mayor, Mr. Alderman Beale, M.A., and the president of the Chamber, Right Hon. Jesse Collings, M.P. To their addresses of welcome our president, Mr. W. K. George, responded. Visits to industries and to educational or other institutions succeeded. Under the guidance of Professor Ashley (formerly of the Toronto University staff) a party led by our Mr. Burton went by special electric car to the university; another party, headed by Mr. Gartshore and guided by Mr. Goodman, to the works of the Birmingham Small Arms Co.; another, led by Mr. H. G. Nicholls, of Toronto, to the engineering works of the General Electric Co. at Witton; Mr. Brian and Mr. Fleury took several to the celebrated silver works of Elkingtons; still others visited the pen works of Joseph Gillott & Sons, the jewellers' art school and Walsh's glass works; also Taylor & Challen's, where minting machinery was in operation. It is impossible, of course, to say how the delegates who were expert merchants or mechanics were individually impressed by all they saw here, but there was no exception heard to the confession of interest and surprise at the great variety offered us. The renown of municipal working as exemplified in Birmingham led many of us to assemble at the General Hospital, the Law Courts, the Shaksperian Library, the Municipal Art School, Technical School, likewise Art Gallery and museum, in the first named of which among some of the finest works of art to be found in England, we saw Bouguereau's beautiful painting, "Charity." In the Museum are some of the finest pictures, besides rare Italian and Japanese curiosities, the original drawings of Burne-Jones and his designs for stained-glass windows, oils by Ford Madox Brown, and many of the most prized paintings of Millais and Rossetti and the other pre-Raphaelite artists. To Mr. Whitworth Wallace, curator of the Museum, a most accomplished man, the visitors are extremely indebted. The party were pleased to have the benefit of the local knowledge and ready attention of Mr. Peter B. Ball, commercial agent for Canada in Birmingham, a valuable officer, and, as we discovered, a popular man in this district.

An excellent luncheon awaited our keen appetites in the Grand Hotel at one, given by the Birmingham Chamber. What was considered by many *the* treat of the day was an address from Right Hon. Joseph Chamberlain, to which our president responded. The whole party were conveyed to the model village of Cadbury Brothers at Bournville, where both Mr. and Mrs. Cadbury delivered addresses: one, homiletic and tedious; the other, by that sweet-mannered lady, piquant and brief. Returning to town at about seven, we had time to prepare for a memorable reception in the Grosvenor Rooms of the Grand Hotel, tendered by Mr. Taylor, chairman of the Chamber, and his daughter. A fuller, a more instructive, and a more enjoyable day I cannot recall during the entire trip.

The receptions given to the delegates at various points "in the Provinces," which expression means in some circles anywhere outside of London, but which meant for us the great towns of Staffordshire, Lancashire and York, varied in their character and scope, but were all friendly and

* * *

UNITED STATES FOREIGN TRADE.

While United States orators and senators and newspapers are boasting from time to time of the wonders their country is achieving or going to achieve in world trade, and while they forget or conceal what a small share their vaunted foreign trade makes of the gigantic total, a plain-spoken man, James J. Hill, of the Great Northern Railroad of America, tells them some plain truths. Says Mr. Hill:

"The people who are banking on Oriental trade are bound to be disappointed. The United States cannot compete with foreign countries until we can manufacture products at a lower cost, which means cheaper labor. We have outgrown the present tariff laws. Great Britain furnishes the Orient half of its iron and steel, the United States less than one-tenth. The transportation rates are the same. We send only raw materials, such as iron, steel and raw cotton, a mere bagatelle. I will never build another ship in this country. The United States, unaccustomed to owning ships on the high seas, offers no encouragement to American bottoms. Kaiser William is the most active seeking agent in the world. The Chinese boycott has been the greatest commercial disaster America has ever suffered. If all other nations on earth closed their doors to American goods, it would not be half as bad as the Chinese exclusion alone.

"The American people are fools when they vaingloriously pat themselves on the back over the so-called American invasion of European and Oriental markets, while the other countries, saying nothing, have practically monopolized the trades. As long as the people of this country want politicians to make laws detrimental to the great commercial and industrial enterprises, the United States must expect to get along with a small share of the foreign trade."

It must be a blow to the self-love of the usually boastful American to be reminded of the mean comparative position his country holds with respect to ownership of salt water shipping. And Mr. Hill may expect some full-flavored abuse for daring to say that he will never build another ship in the United States. But he has tried it on a large scale, from the fresh water ships "North West" and "North Land" of 5,000 tons, plying on the Great Lakes, to Pacific liners of four times that tonnage. And if he determines to go abroad to buy future ships he must have good reason.

* * *

"COLONIZING" ON A LARGE SCALE.

It looks as if "New Quebec" is on the road to a rapid rate of development such as is distinguishing New Ontario. According to a despatch from Boston, a syndicate is now in course of formation in that city for the purpose of acquiring a vast tract of land in the northern part of the Province of Quebec, north of Lake St. John, the intention being to purchase from 400,000 to 500,000 acres of land, fifty to one hundred miles north of the parts already colonized. The syndicate, it is said, will immediately enter into negotiations with the Government of the Province in connection with the project. If the land can be secured at a reasonable price, it is ready to undertake the settlement of the lands purchased, bearing the cost of surveying and construction of roads, etc. The syndicate will engage to place 150 families annually on these lands, and will erect grain mills, saw mills, etc., and possibly railroads in order to bring the region into connection with the portions already colonized. Beside the cost of purchase, the syndicate would have to expend hundreds of thousands, if not millions, of dollars to develop their lands. It is further stated that several New York capitalists are also talking of forming a syndicate for the purpose of acquiring great tracts of land north of Lake St. John.

LIGHTNING RODS.

After considering the matter for something like three years, the National Fire Protection Association has formulated specifications for a standard lightning rod. There being no patents upon any part of the appliance, competition will regulate the price. The directions for making and placing the rod are given by Fire Marshal Davis, of Ohio. He summarizes thus: Protection against lightning is advisable on isolated buildings, and on all buildings having tall chimneys, steeples, high peaked or gable roofs, or flag poles. One "rod," with proper air and earth terminal, is recommended per unit of roof area, from 2,000 to 5,000 square feet, according to character of roof; i.e., from 40 by 50 feet, a building of which dimensions would cover 2,000 feet to, say, 60 by 84 = 5,000 square feet. Particulars of what constitutes the standard lightning rod are given, which we condense as under:

Conductors to be put in sheet or tape form of either copper, weight not less than 6 ounces per foot, or iron weighing not less than 2¼ pounds per foot, the latter to be painted or galvanized to prevent corrosion. Should be rur down side of building where best ground is obtainable, preferably on the side most exposed to rain. Not to be run nearer than five feet to interior piping unless absolutely unavoidable. To be run as straight as possible, avoiding all turns of radius of less than one foot, and to incline downwards throughout its entire course. Should never be insulated, but fastened securely to the surface. Must never be run through iron pipes.

The proper grounding of rods is important. The Board recommends as a standard a copper plate not less than two feet by three feet by 1-16th inch buried in permanently damp earth four feet below the surface, with three inches of crushed coke or charcoal underneath, and the same material above to within six inches of the surface of the ground. Or, an iron casting with not less than six square feet of surface. Should be buried with not less than six inches of scrap metal and coke under and six inches over same. "A proper ground is absolutely essential, and permanently damp earth is absolutely required."

* * *

LAKE SUPERIOR CORPORATION.

The annual meeting of the Lake Superior Corporation was held at Jersey City, New Jersey, on Wednesday of last week. Mr. C. D. Warren, the president, was happily able to refer to the fact that the last Canadian property of this important company to remain in the receiver's hands, viz., the Lake Superior Power Co., had been released, and had now passed into full control of the corporation. It is a matter for congratulation that the aggregate net income of the plants operated is now in excess of the fixed charges of the corporation. The outlook for the present year would appear to be encouraging. With the present equipment an output of 150,000 tons of rails may be looked for, which is half as much again as last year, while in addition to this the pig iron required for this rail production will, it is calculated, be turned out by the company's own furnaces.

For the fiscal year ending June 30th last the company's income was as follows: Interest on investment securities of subsidiary companies from net earnings, $543,455; interest from banks and other sources, $42,084, or a total of $585,539. The liabilities on the same date stood at: Coupons from first mortgage bonds outstanding, $452,174; general expenses, taxes and organization costs, $98,562; profit and loss, $34,802. The production during the year was as follows: Ore, 203,569 tons; pig iron, 66,235 tons; steel rails, 98,822 tons; ground wood pulp, 27,817 tons; lumber sales, $233,147.

The officers for the ensuing year were elected as follows: Charles D. Warren, president; Charles E. Orvis, first vice-president; Thomas J. Drummond, second vice-president; John T. Terry, Jr., treasurer and secretary; Edward White, assistant treasurer and assistant secretary; directors, Alfred P. Boller, Dumont Clarke, Francis H.

THE BIRMINGHAM CHAMBER OF COMMERCE.

We acknowledge the receipt, through the courtesy of a subscriber in Birmingham, of a copy of the "Commercial Year Book of the Birmingham Chamber of Commerce, with a trade index of its members." The book, which is one of 300 pages, compiled by the secretary, G. Henry Wright, F.C.I.S., acquires added interest for us from the fact that its introduction is furnished by Professor W. J. Ashley, now Dean of the Faculty of Commerce in the University of Birmingham (and a member of council of the Chamber), but formerly professor of Political Economy in Toronto University.

That the incorporated Chamber of Commerce of Birmingham is an influential body may be inferred from the facts that in addition to elected members from among the merchants of that great city the council embraces (ex-officio) the mayors of Aston, Smethwick, West Bromwich and Birmingham itself; the presidents of the Coventry, Dudley, Kidderminster, Walsall, North Staffordshire, Wolverhampton and Worcester; various members of Parliament, among them Joseph Chamberlain and Evelyn Cecil; and several Birmingham organizations of industrial and other kinds. That it is no part of the intentions of the Chamber to hide its light under a bushel appears when we are told that copies of the Year Book have been sent to the English, foreign, Canadian and other colonial boards and chambers, to the British ambassadors, consuls and consular agents, to the principal town clerks in England, to 1,000 home and foreign clubs, and to 2,000 merchants outside the Chamber.

It is a book worth having, too; and since this one is labelled "First Year of Issue," we conclude that its appearance, as, indeed, its title implies, will be an annual event. There is not as much about the trade of Birmingham among its statistics as one would naturally expect, for the great bulk of the 136 pages given to this department consists of Board of Trade figures relating to the trade of the whole United Kingdom. But pages 109 to 112 give entertaining particulars of the different manufacturing output of Birmingham and District, which designation includes the counties of Warwick, Stafford and Worcester, on all which the town of Birmingham abuts. And pages 64 to 66 give tables of the number of persons employed in different trades in this district compared with the whole number in the Kingdom. The arrangement or re-arrangement of official Board of Trade figures of production, import and export—a laborious work—is skilfully done, and will make the book one to which many will turn with satisfaction who desire to know readily the bearing of such figures upon principles or facts. Pages 118 to 125 on inter-imperial trade are valuable. And we call attention to Mr. Wright's occasional heading, entitled "Memorandum."

In the Trade Index, which portion of the book occupies about one-third of the whole, the names of firms or companies who are members of the Chamber are given, with their addresses, telephone numbers, telegraph code used, etc., in parallel columns, and arranged under descriptions of the kind of business done. The enterprise of the Board in this publication has been well supported by advertisers, for we have counted ninety-eight pages of advertisements—a good proportion of them full-page ones. There must be twenty or thirty towns and villages whose trade goes to make up the district totals. Really, as the touring Canadian Manufacturers discovered in their recent visit, so outspread are the manufactures of that marvellous Island that one cannot go five miles in any direction without seeing the stack of a furnace or the chimney of a coal-pit or factory. It takes a whole page to enumerate the products of Birmingham, but other places near have a repute for some specific output, as Redditch for fishhooks and needles;; Coventry, for silks, watches and motors; Walsall, saddlery and harness; Atherstone, felt hats; Bilston, brass founding and japanned ware; Cradley Heath, chains and anchors; Tamworth, earthenware and terra cotta. Wolverhampton and Dudley have, of course, long been famous for iron and brass goods of many kinds.

It would be easy to go on, did space and time permit, quoting from this very full volume. And we should like to quote largely from the admirable introduction. But a good purpose will have been served if we have induced those in Canada who have been so fortunate as to receive a copy to peruse it with care. For, if a single district of the Midlands can present such an array of industries, whose products go everywhere in the world, what should we think of Britain's aggregate industries supposing we could get an adequate view of them!

* * *

—The city of Hamilton shows a growth in the last twelve months of about two thousand in population and $3,000,000 in the value of property assessed. Although the increase in number of her citizens is not so great as Hamilton had a right to expect, a growth of something like ten per cent. in property and income assessment is nothing to be ashamed of. The assessment department figures are given below: Real property, $27,161,313; business assessment, $3,874,025; income assessment, $1,536,325; area assessment, $78,035; total, $32,649,698. The assessment of the previous year totalled $29,734,484, so that the increase amounts to $2,915,214, or nearly 9.8 per cent. The figures of population for the two years are here compared, showing an increase of 1,989: Population, 1905, 59,547; population, 1904, 57,558.

* * *

—Many people in Northern Ontario would appear to be on the hunt for diamonds in that region, judging from the several samples of rock supposed to contain diamonds which are making their way to the Geological Survey at Ottawa. So far, none of the samples have proved to contain the genuine article, but have crystals of other minerals, garnets being one of the varieties. Work will shortly be done by the Geological Survey to locate the source of the drift diamonds, which have been found to the number of about twenty. These precious specimens drifted away from their original home, but their discovery proved the existence of the diamond in not remote places; and it is to be remembered that experts believe there will be great diamond fields discovered some day in Nipissing, Algoma, or adjacent districts in New Ontario. Some of our experts have already been sent into the district.

* * *

—That the feeling in favor of municipal ownership of utilities, whether well or ill-founded, is becoming recognized as a real danger by some of those interested is shown in the address of Mr. W. Caryl Ely, president of the American Street Railway Association, at a convention in Philadelphia on the 28th ult. He said: "The question of municipal control of street railways and other public utilities may soon become an issue in municipal politics. In several instances, indeed, it has already been interjected. This is due to a mass of censorious statements in the public press that none of us has taken the trouble to deny, but we can keep quiet no longer; we must refute the statements or suffer by them. Some believe that this wave of sentiment that is sweeping over the country will subside in a short time, but it will not. It is for us to stop it or we will be swept away. At the last analysis the question resolves itself into this: Can or cannot municipal ownership, under our present form of government, successfully operate street railways? The answer is, emphatically, it cannot. All this theoretical and academic talk that we hear is so much wind. Municipal ownership of trolley roads under our present form of government is impracticable. It is municipal socialism the demagogues are shouting."

Mercantile Summary

The Pembroke Electric Light Company is authorized by the Ontario Government to increase its capital stock from $50,000 to $150,000.

The London Box Company, whose factory in London, Ont., was destroyed by fire a few weeks ago, have bought a site upon which they will shortly begin to re-build.

J. A. Haralson, a prominent mining expert of Georgia, has bonded the sixteen "Cotton Belt" claims on Shuswap Lake, B.C., the price being $100,000. The ore is silver-lead.

The fire, water and light committee of the Winnipeg city council has decided in favor of sinking another well at once to augment the water supply. The cost is estimated at $50,000.

The Canadian Oil Refining Company, Limited, of Toronto, has a charter to manufacture, buy and sell petroleum oil, salt, and other products, and to carry on the business of piping and storing refined and crude petroleum oil and other products of oil land.

The Tracadie Lumber Company's mill, hotel, and several other buildings, with a large stock of manufactured lumber, were destroyed by fire on the 9th inst. at that place, which is near Antigonish. The property is owned by a Maine company. The loss is estimated at $100,000, covered by insurance.

The Canadian Hart Corundum Wheel Company, Limited, with a share capital of $75,000 and headquarters at Hamilton, has been granted a charter to carry on business as manufacturers and dealers in abrasive materials, machinery and hardware, and to mine and treat minerals. G. F. Webb, Chas. and Seward Wilcox, both of Hamilton, Ont., are among the provisional directors.

The contract for the Lake Superior branch of the Grand Trunk Pacific Railway from Fort William to Lake Superior Junction, about two hundred and ten miles, has been awarded to Foley Brothers, Larson & Company, of Winnipeg. This means that about five hundred miles of the Grand Trunk Pacific will be under actual construction by the end of October, and it is hoped fully a thousand miles will be under way by the end of November.

The Government has made some new regulations respecting quartz, gold and copper mining in the Yukon. Up to the present time the Government has exacted a royalty of 2½ per cent. on all gold produced in the Yukon, both from placer and quartz sources. To encourage the development of quartz workings, which require a large preliminary outlay, the royalty on quartz gold will not be exacted hereafter, provided improvements amounting to $25,000 are made to the claim within five years from the passing of this Act or in case of a group of claims, if a quartz mill of five tons per claim capacity is erected within five years.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST. EAST TORONTO.

Mercantile Summary.

The Marion Steam Pump Company is operating a gold dredge on the Yukon River some 50 miles up from Dawson, and is said to be making large profits. The plant is operated by electricity.

The E. H. Harcourt Co., Limited, will carry on business in Toronto as printers, publishers, stationers, lithographers, and manufacturers and dealers in stationery supplies. The share capital of the concern will be $100,000.

The Brakehurst Oil Company, Limited, Sarnia, Ont., capital $100,000, will carry on a mining, milling, reduction and development business. J. H. Cooper, of Sarnia, Ont., and G. M. Trefts, of Buffalo, N.Y., are among the provisional directors.

The Robson Leather Company, Limited, is taking over the long-established leather and tanning business of James Robson & Sons, of Oshawa, and will perhaps take over other businesses of a similar character. It will work on a share capital of $100,000.

We acknowledge receipt of a large-sized and handsomely executed calendar, from the month of July this year to the close of next year, from the Benallack Lithographing and Printing Co., proprietors of the Bishop Engraving and Printing Co., of Montreal.

Several important strikes are reported from the dry ore belt around Slocan City, B.C. One is said to have been made at the Myrtle group of claims, owned by Tattersall Bros. & T. Wareing, at the head of Twelve Mile Creek. The vein makes a showing of fourteen feet in width, giving, it is said, silver values of 100 to 200 ounces per ton. Grey copper, native silver and argentite are sprinkled through the ore.

The Dominion Government, it is said, will shortly begin work on the construction of a marine railway at Sorel, P.Q., to provide facilities for the repair of Government steamers, dredges, etc. At present steamers and dredges on the Lower St. Lawrence ship channel have to be taken to Quebec and put in dry-dock for repairs. This involves expense, loss of time, and the inconvenience of being removed from the facilities of the Sorel shipyard.

Figures furnished by the Inland Revenue Department indicate that the average consumption of beer in Canada for the last fiscal year was five gallons for each person. The spirits used give an average of a little over a gallon for each person. The figures of the Government show that the consumption of spirits was 1,031 gallons per capita, at a cost of $1.84, and 4,972 gallons of beer at a cost of 21 cents. The consumption of wine was comparatively small, being .09 of a gallon per capita, costing four cents. The tobacco statistics show that smoking was indulged in to an enormous extent. There is an average consumption of a little more than two and a half pounds per capita, costing $1 a person.

A Change in the Trusteeship.

Whether of a Will, Marriage Settlement or Bond Issue, is a troublesome and expensive matter.

Where private trustees are appointed such changes are inevitable.

The Trusts Company alone enjoys continuity of tenure, fixity of residence and permanent records.

Mercantile Summary.

Ratepayers of Arnprior, Ont., have voted in favor of a by-law to grant a loan of $35,000 to the Montreal Suspender and Umbrella Manufacturing Co. to assist that company to erect a large factory there.

Mr. P. B. McNamara, Canadian Commercial Agent at Manchester, Eng., states that a company there wishes to obtain an analysis of Canadian Cobalt silver ore, with a view to purchasing it in a raw state if possible.

A large syndicate has been formed in London, England, it is said, to buy some 500,000 acres of land belonging to the Canadian Pacific Railway in the vicinity of Edmonton, Alberta. Great interest is being taken in the proposition.

The strike in the collieries of the Western Fuel Company at Nanaimo, B.C., which has been going on for the past four months, is now declared "off," the men and their employers having come to an agreement, bound by a two years' contract.

The Rothschild Cobalt Company, Limited, is the name of a new half-million dollars concern to be started at Haileybury for the purpose of carrying on a mining and development business. M. and H. J. M. Rothschild, of New Liskeard, are interested.

A. E. Armstrong, doing business in Montreal as a jobber in flour, sugar and heavy groceries under the style of the Standard Flour and Feed Co., has assigned, and is said to owe as much as $56,000. He has been a large operator in foreign refined sugars, having, it is said, some $40,000 worth warehoused in that city, on which article there has of late been a heavy shrinkage.

Word comes from Nova Scotia that Alex. McDonald, Jr., in a small general store way at Harrigan's Cove, near Halifax, is insolvent. Liabilities are mainly local, and of small extent.—Thomas Hartling, also a small trader at Quoddy, in the same district, has put his affairs into the hands of G. Faulkner, of Halifax, assignee.—J. L. McLean, in the tailoring line at Old Bridgeport, N.S., has assigned with only small liabilities.

Hon. Frank Oliver, Canadian Minister of the Interior, is of opinion that the resources of the Yukon as a great mining country are by no means exhausted. Much interest, he says, is taken by the people of Dawson and the surrounding country in the surveys for an extensive system of water supply which Engineer Thibeaudeau is now making. It seems to be the general opinion that if a sufficient supply of water can be secured, the riches of the bench claims and what is known as the White Channel will astonish the world. This White Channel, it appears, is composed mainly of whitish decomposed quartz from which the gold can be easily extracted, and it is contended that it is there in paying quantities.

Mercantile Summary.

A manufacturer of trunks and valises at Montreal in a moderate way, James Sager, has become involved through sickness, and the defalcations of an employee, and is reported as seeking compromise indulgence on liabilities of about $12,000.

The Canadian Pacific Railway is making headway on its line from Victoria Harbor to a junction of the Ontario and Quebec divisions, probably either at Peterborough or Havelock, the result of which will be to much improve the chain of transportation from the North-West to the seaboard.

Joseph Warren, for the past thirty years a prominent general dealer at Pointe a Pic, Que., was unfortunate in being burned out last month. His loss has been estimated at $20,000, only half covered by insurance, and he has come before his creditors with a proposition that they accept 50 per cent., cash, on their claims.

Mr. J. Nishimura, accompanied by two expert Japanese farmers, are visiting Canada under commission from the Japanese Government to buy stock for breeding purposes. It is believed that a cross of the native cattle with Canadian-bred animals would be excellent. Besides several Ayrshires and Shorthorns they have already purchased thirty thoroughbred horses.

Municipal reform pays good dividend, says the Philadelphia Record, in noting the fact that contracts for twelve miles of asphalt street paving have been awarded at the lowest figures that city has ever had the advantage of. "On these contracts, the difference between $1.52, the present price, and $2.59, the price under gang administration, represents a saving of a good deal over $200,000 on the work awarded yesterday."

A winding up order has been issued in the matter of the Pineo-Dowson Co., Limited, manufacturers of patent medicines, etc., in Montreal, and C. A. McDonnell has been appointed liquidator. The company was chartered under Dominion letters, patent as recently as last April, with an authorized capital of $100,000, and shortly after starting operations became involved in litigation with regard to the use of certain formulae.

A voluntary assignment has been made by J. A. Ledu, general dealer at Coteau Station, Quebec., who formerly worked on his father's farm, and who began to be a "merchant" in 1903, with but little of the trade knowledge or experience necessary to success in that calling.——Hormisdas Sauvé, in a grocery business at Cedars, Que., an adjoining parish to the above, has also failed as a merchant after a very brief business experience, extending over about sixteen months. If both these men will take a resolute hold of the plough handles or harrow a while, they would do more good to themselves and the country.

A Canadian Associated Press despatch says that Leroi, No. 2, has declared a dividend of one shilling per share on Saturday last.

An offer of forty per cent. is made by Joseph Marcotte, dry goods retailer, Montreal, lately reported as failed.——T. Bouchard, a recently insolvent grocer, of the same city, makes an offer of 25 cents on the dollar.——H. Belisle, butcher and grocer, also of Montreal, has made an offer of 30 cents, on liabilities of $1,877.

The Dominion Government has passed an order in council establishing on the Prince Edward Island Railway the same maximum freight mileage tariff as that now in force on the Intercolonial Railway. There is said to be not much difference between the first-class rates of the two roads, but there is a material difference in the third, fourth and fifth class rates. The traffic manager suggested that for the sake of uniformity, and also to obtain additional revenue during the winter season, the maximum rates on the Intercolonial Railway should be applied to the Island road.

It is agreeable to find, from the trade enquiries lately made, that a greater interest appears among merchants and manufacturers in France on the subject of Canada as a place to do business in. La Chambre de Commerce Francaise de Montreal has received a number, of which we cite the following: Several good firms in Epernay, Bordeaux and Cognac want representatives to sell in Canada champagne, clarets and brandies. Two French olive oil houses wish agents to introduce their products in Canada. A French manufacturer of hosiery desires an active agent in Canada. A French maker of boots, well appreciated on English markets, wants to be put in touch with Canadian buyers; so does a French manufacturer of cards, for photos. A French editor of illustrated post-cards desires an agent in Canada. A maker of printing ink wants a representative in the Dominion, and a Parisian maker of artificial flowers wishes buyers in Canada.

THE BRITISH POST-OFFICE.

An enormous and steadily increasing business is done by the British Post-Office Department. A report upon it or rather a condensation of the departments' report for the year ended with 31st March last, is forwarded to Washington by Mr. Stephens, United States Consul at Plymouth, Eng., and reprinted by the New York Journal of Commerce. The number of letters delivered in the post-office continues to increase, the total for the year being 2,624,000,000. The number of letters delivered in London, however, shows a decrease of five per cent. This, it is claimed by the authorities, represents no falling off in London's correspondence, but is rather owing to the popularity of picture post cards, of which there is an increase in number equal to nearly twenty per cent. Newspapers to the number of 179,000,000 were posted, while there were 843,000,000 half-penny (1 cent) packets and 97,000,000 parcels. A grand total of 4,479,000,000 communications of various kinds, excluding telegrams, passed through the mails.

Although the number of insufficiently addressed letters was smaller than in the previous year, the total value of the contents thus jeopardized was greater by more than $20,000. A slight increase shows in the numbers of articles found loose in the post during the year. These included $5,699 in cash and $58,632 in checks and other forms of remittance. During the twelve months 88,969,000 telegrams passed over the post-office wires, against 89,997,000 in 1903-1904. This falling off is thought to be due to the growth of the telephone system. The total number of conversations over the trunk telephone wires for the year was 15,461,822. This shows an increase of 1,993,847, or say 14.8 per cent. over the number for the previous year. The gross revenue derived from this service was $1,850,769. The average value of each conversation was about 12 cents. The telephone is being more largely used for sending messages to the various post-offices for transmission as telegrams or express letters. Over two and one-half million telegrams were sent in that way during the year, and 48,000 express letters.

The postal revenue of the year was $79,202,180, the expenditure $55,749,573. The net profit was $23,408,603, or nearly $980,000 more than last year. There has for years been a heavy deficit in working of the state telegraphic system. On the working of the telegraphs, if allowance be made for interest on the capital created for their purchase, the telegraph deficit on the year is $5,917,557. It should be noted, however, that the yearly deficit on telegraph revenue is decreasing. We do not find in this condensation any comparison of the parcels post carriage of the last year with previous years. The amount of freight carriage done by the British post-office has given rise to much controversy and strong objection.

COSTLY MUNICIPALIZATION.

An outline of the result of municipalizing an industry is given by the London Daily Mail in describing the experience of the ratepayers of Marylebone, one of the boroughs of the city of London. It appears that from the very first the story of municipal electric lighting in Marylebone has been one of blunders and mistakes, "and these blunders," says the Mail, "promise to cost the borough a vast sum before it learns by bitter experience that municipal trading rarely in the long run proves a success.

"A few years ago when there was a general impression abroad that electric lighting was a veritable gold mine, certain officials of Marylebone were seized with the idea that an excellent way of lowering the rates would be for the borough to supply its own electric light. It was in the height of the fever for municipal trading, when it appeared as though money could always be borrowed at 3 or even 2½ per cent., and when the public had not begun to understand that for every municipal scheme which proves a tolerable success, two prove dismal failures.

"The electric lighting of Marylebone was then in the hands of a private company, the Metropolitan Electric Supply. Under the terms of the Metropolitan Lighting Act the borough authorities, without giving the unfortunate ratepayers information of their proceedings, went to the company and required the sale of its enterprise in Marylebone. The company offered to accept £900,000 for its cable system, station and goodwill. The borough authorities, however, declared this price too high, went to arbitration upon it, spent some £60,000 in law costs, and finally were ordered to pay over £1,200,000 to the company. Thus at the start through lack of business capacity they had saddled the ratepayers with an unnecessary charge of £360,000, on every penny of which interest and sinking fund charges will have to be paid. The indifferent management of the negotiations aroused considerable indignation in Marylebone, but the ratepayer in a large borough is almost helpless, and nothing could be done.

"The borough authorities next proceeded to build a new and costly power station at a time when everything points to the future supply of London with electric current being carried out from works of the largest size, when electricity will be manufactured not in teaspoonfuls, but upon an enormous scale, so that the Marylebone station will be virtually obsolete before five years have passed. . . .

"Great caution should always be exercised in London boroughs in pledging their future too heavily, if only because there are numerous instances in the immediate past of social migrations and of the decay of once prosperous and wealthy districts. The final conclusion, however, will be that our system of government is at fault in permitting so vast an outlay being incurred against the wishes of those who will have to pay the bill, and against the real interests of the poorer ratepayers, who do not use electric light and probably never will."

* * *

POST-OFFICE MYSTERIES.

The clerks in the foreign branch of the post-office in New York, says the Epworth Herald, have many amusing episodes to tell. One day a modest young man, after inspecting the mail-slots marked "foreign," "city" and "domestic," approached the clerk at the window.

"Where do you mail letters?" he asked.

Ascertaining that the letter was for city delivery, the clerk told the man to drop it in the slot marked "city." The modest man went over, read the inscriptions, and came back to the window with the letter still in his hand.

"Well, did you mail it?" inquired the clerk.

"No," replied the man; "I don't know what to do. You see, it's this way. She lives in the city, but she's a foreigner and a domestic."

On the same day a man approached the window, and, thrusting in a money order, asked for the cash. "We don't cash these here," said the clerk. "This is the foreign branch."

The man leaned over and said, confidentially, "I know this is the foreign branch. That's why I came here. That order is from my father-in-law in Cincinnati, and"—lowering his voice—"he is a foreigner."

* * *

THE TEXTILE CENTRES.

Business in Bradford, Yorkshire, has been quiet in all kinds of both home and colonial wools, not because there was any sign of less confidence in the trade, but because stocks of wool are now reduced to an unusually low ebb. As the quantity of wool offering at the present London Colonial wool sales is small, a little excitement there might make the process of covering orders extremely expensive. Attention has repeatedly been drawn to the unusually high values of all kinds of crossbred colonial wools at the present time, and it was certainly the opinion of some of the large users that the prices of these wools had reached high water-mark at the July sales in London. Since that time, however, prices have put on another 10 per cent., and there is every reason to expect that this advance will be fully maintained quite up to the end of the present sales. There can be no doubt that very dear crossbred wools must mean the dropping out of use of a good many cheap fabrics used by the million which are made from these wools, and of decline in this branch of wool consumption. Any tendency towards lower values seems to be more than counteracted by the great increase in the consumption of crossbred wools in the woolen and tweed trades, and the fact that the attenuated stocks of crossbred wools will not be replenished by the new season's wool to nearly the same extent that the available supply of merino wool will be increased. Most of the leading makers of mohair dress goods, both in plains and also in very neat fancy effects, report that they have sold very good quantities of these goods much more freely in the home trade for the coming spring season than was the case a year ago. It is said that creams and light shades of grey and fawn will also be in demand for dust-coats.

Prices for raw silk softened somewhat during the present week, says the Dry Goods Economist, due to the unwillingness of manufacturers to purchase to any extent at the present high rates quoted, for the reason that prices for the spring season of 1906 for the finished materials are not yet established. It is the opinion of manufacturers that but little relief from the present high prices will be experienced during the spring 1906 buying season, as the most reliable reports from foreign raw silk centres are to the effect that high prices are to rule for some time to come. The raw silk market still shows a comparative advance of 15 per cent. as compared with prices that ruled one year ago, with No. 1 Japan filatures as a basis for comparison.

—An eccentric farmer near Highland, Kansas, was married the other night. "Do you," said the preacher, "take this woman to be your wedded wife, to love and to cherish in sickness and health, for better, for worse, for rich or for poor, until death do you part?" There was an awkward pause. Then the bridegroom finally replied, "Them's the calculations."—New York Tribune.

* * *

—Genius that may grow to great things must have been born in the office boy of whom the St. Louis Post-Despatch tells this story: The "boss" was bending over a table, looking at the directory. The new office boy slipped up quietly and put a note in his hand. The boss read: "Honored Sir. Your pants is ripped." The boy's pay was raised.

It DOES Make a Difference

which Company you insure in.

If making an investment in Real Estate, or anything else, care is—or should always be—taken to secure property that has a reasonable chance of increasing in value, and giving a good return for the investment.

This same care should be taken in placing Life Insurance to see that the premiums are invested in such a manner that they give the best possible return to the insured.

IT **DOES** MAKE A DIFFERENCE WHICH COMPANY YOU INSURE IN.

Convincing evidence of the value of the Company's Policies from an investment standpoint will be mailed on application to:

SWEET CAPORAL

CIGARETTES

STANDARD OF THE WORLD

SOLD BY ALL LEADING WHOLESALE HOUSES.

MONTREAL MARKETS.

Montreal, October 11, 1905.

Ashes.—Business is light, but receipts are lighter, and first quality pots, of good tares, bring from $5.25 to $5.30; seconds, $4.75 to $4.80. Pearls are particularly scarce, and would probably readily bring in the neighborhood of $8 per cental.

Dry Goods.—Fuller returns with regard to retailers' payments on the 4th inst. show that the proportion of paper provided for at that date was not as large as that of a year ago, the falling off being on city paper, which is hardly surprising considering the slowness of trade in this direction as recently noted. Sorting business shows some decline, owing to the late prolonged spell of fine warm weather, but wholesale trade may be called fair as a whole, with some proportion of orders being already placed for spring prints, etc.

Dairy Products.—The shipments of cheese for last week were the largest for some time past, aggregating 119,334 boxes, as compared with 103,281 boxes for the same period of last year, and the total exports for the navigable season to date reach 1,646,626 boxes, just about 46,000 boxes in excess of the figures at this date a year ago. Shipments of butter were moderate, being 20,807 packages. The conditions existing in the cheese market are greatly different from those of a week ago, fine Easterns being quoted at 11⅛ to 11¼c.; fine Western whites, about 11½c., and colored, 11¾. In butter the market tends to quietness, but finest creamery is held at 23¼c., good to choicest ranging from 22 to 23c.

Furs.—There is as yet nothing doing in new catch of raw furs, and buyers' quotations will hardly be issued before the middle of November. It is expected that values will be fully sustained, if not advanced in same lines, at the approaching London sales to be held at the end of the month.

Groceries.—Advices from primary points indicate that Valencia raisins are very easy, being actually lower in price than known for some years. Loose Malagas are firmer in sympathy with the high prices of California fruit, but they are still cheap in comparison with the latter goods. Sultanas are advancing slightly. Shipments of new dates, which had been materially delayed by the obstruction of the Suez Canal, are now en route for New York. We have noted elsewhere the arrival of the "Bellona" from Mediterranean points. Filberts are slightly easier, also shelled almonds. The sugar market is still an easy one, with $4.60 the ruling figure for standard granulated in barrels. In teas there is a little more doing, but the movement is not an active one. Japan's continue to firm up, and the quality of goods now coming to hand is comparatively poor. Low grade Ceylons and Indians tend to firmness, but the better grades are in full supply with values in buyers' favor. The stock of low grade gun-powders and young hysons is getting into narrow compass, owing to the policy of the Government in now subjecting such goods to close inspection before admission.

Town of Gananoque

DEBENTURES.

Tenders will be received by the undersigned until 4 o'clock p. m. of Tuesday, 24th instant, for the purchase of $35,000 Water Works and Sewerage Debentures, bearing Interest at 4%, payable half yearly, the money to be paid and Debentures delivered at the Treasurer's office in Gananoque.

Further particulars can be obtained on application to W. I. Wilson, Esq., Chairman of Finance Committee, or to the Town Clerk.

Highest or any tender not necessarily accepted.

S. McCAMMON,
Town Clerk.

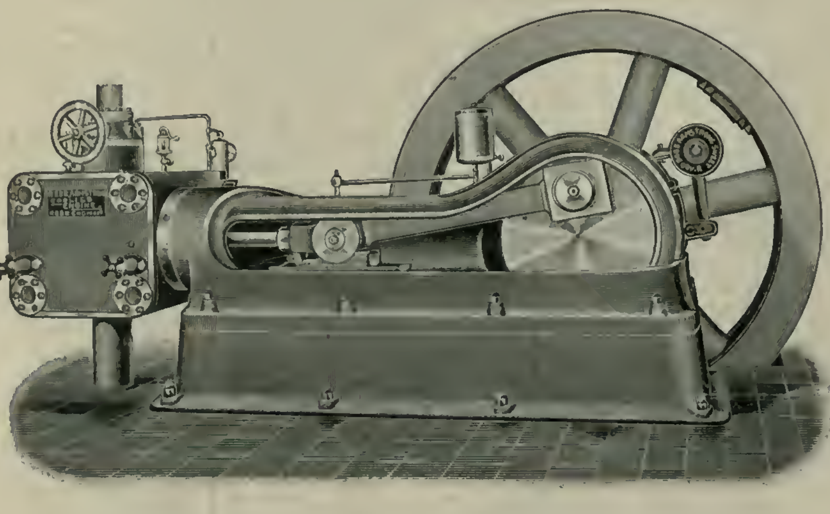
Gananoque,
October 4th, 1905.

Hides.—From 11½ to 12c. per pound continues to be freely paid for No. 1 beef hides, though receipts are a little more liberal during the past week or so.

Leather.—Boot and shoe travellers appear to be doing well on the road, some manufacturers reporting the proportion of orders on hand at date considerably ahead of this time a year ago. No great amount of cutting prices is yet being done, however, and leather men report just a moderate movement, with values in all lines very firmly held.

Metals and Hardware.—The demand in these lines continues active, and there

A FINE STEAM PLANT.



"I will say without qualification that it is as fine a boiler and engine plant as I have ever had the pleasure of seeing for its size. The engine was working without heating, and absolutely without any noise. I wish to congratulate you on your success in building this class of engine, and hope that we may have pleasure in dealing with you again."

The above refers to a 350 horse power Robb-Armstrong Corliss engine and two 175 horse power Robb-Mumford boilers installed by us.

is a tendency to increasing firmness in manufactures of iron generally. One large maker of wire nails has advanced his prices 10c. a keg, and revised quotations are looked for at any time for boiler plate, iron pipe, etc., etc. Owing to the constant advance in ingot tin higher prices for tin plate are deemed not improbable. Ingot tin is quoted strong at 36½ to 37c.; pig lead is again firmer at $3.80 to $3.85; copper steady at 17¾c.; spelter, $6.75 to $7; sheet zinc, 7 to 7¼.: antimony is a little easier at 14 to 14½c. Other lines remain as they were.

Oils and Paints.—About the only notable feature since last writing is quite a strong advance in turpentine, which is now quoted at 97c. per gallon in single barrel lots. Linseed oil continues to rule easy; castor, 7 to 8c.; fish oils dull, with cod oil quoted at 36 to 38c.; steam refined seal, about 45c.; whale oil, 35 to 40c. Ground white lead, $4.25 to $4.50 for pure, according to lot; bulk putty, $1.40.

Wool.—The demand from woolen mill men is still of a slow character, but prices of all kinds are firmly held at the following quotations: Domestic fleece, 28½ to 29c.; ditto pulled, 30 to 31c.; ordinary capes, 17½ to 18½c.; North-West, 19 to 21c.; fine B.A. scoured ranges up to 45c. per lb.

⁂

TORONTO MARKETS.

Toronto, October 12, 1905.

Drugs, Chemicals, Etc.—No appreciable change has occurred in the position of the staple drugs. Business in local markets continues in fair volume, with no special feature worth noting. A report from Manchester dated 29th ult., said, referring to chemicals: The better feeling mentioned in our last report a month ago is fully maintained and in fact strengthened. With the close of the holiday season there has been a serious settling-down to business, and satisfaction is in general expressed with the present position of affairs and the outlook. For export there is a good demand, and the home trade also is fair. There is more enquiry for delivery over next year, and although values in general are inducing caution, much care is shown in buying, and whilst the tendency is to cover prospective wants liberally there is little disposition towards positive over-purchasing. In the heavy alkali branch there is a good tone. Consumers of bleaching powder continue to cover their wants for next year and prices are firm, but under special circumstances some slight concession is granted. Caustic soda values are steady for prompt and forward delivery, and contracts are being placed for next year. Other alkali products are moving off steadily. White powdered arsenic has advanced strongly, a shortage in supply having become apparent.

Flour and Grain.—The usual quotation for ninety per cent. patents now is $3 in buyers' bags, with more for extra brands. Not much is doing in the export business, freight rates being exceedingly high. There is a good demand for shorts, and bran is rather scarce. Rolled oats is a little on the easy side. Ontario wheat is meeting with only a light movement. That of the Manitoba wheat is being hampered by a shortage of cars and there is considerable complaint from millers, who have sometimes had to cancel their orders. Oats are very firm, and some complaint is heard respecting quality. Rye is firmer owing to increased demand. In corn little trade is being done. Other lines are much as before.

Fruits and Vegetables.—Prices for all kinds of fruit keep up well. Plums are now practically out of the market. Pears, too, are becoming scarcer. There have been a good many lemons entering the market this week and prices are lower. We quote: Peaches, 20 to 90c.; pears, 50 to 85c.; plums, 35 to 60c.; apples, basket, 15 to 25c.; grapes, Concord, 15 to 30c.; grapes, Niagaras, 17 to 30c.; Tokay grapes, $2.25 to $2.50; Cantaloupes, basket, 20 to 25c.; Cantaloupes, case, 65 to 80c.; Cantaloupes, Rockyfords, basket, 35 to 40c.; bananas, bunch, $1.75 to $2; lemons, box, $4.50 to $5; oranges, Jamaicas, barrel, $5.50; oranges, crate, $5.25 to $6; cranberries, barrel, $9 to $9.50; tomatoes, basket, 30c.; celery, dozen, 35 to 40c.; onions, 25c.; onions, silver skins, 85c. to $1; onions, case, $2.50; sweet potatoes, barrel, $3 to $3.50; peppers, large, 20 to 50c.; peppers, small, 50 to 75c.

Groceries.—Trade in general groceries has shown marked improvement the last few days. Sugars are a trifle firmer than they were, though no change in price has taken place. An active demand is noted for tea. Canned goods are in good movement and there is a firm undertone. Dried fruits are meeting with a seasonable demand. Payments are said to be better than they were a month ago.

Hides and Leather.—The offerings are of good quality and are quickly absorbed, at unchanged firm prices. In some grades of leather there is said to be some degree of scarcity. Business is good and values strong.

Managers and Underwriters.

Provisions.—Really choice dairy butter is not in large supply and the demand is quite active, while other grades are more plentiful. Cheese is still very firm. Eggs are in good demand and are quite firm. Poultry is easier. Smoked meats are firm and there is a good market.

Seeds.—Prices for alsike are a little easier owing to a slackening of the foreign demand, while red clover is firmer.

Wool.—The market for wool may be described as quiet, with values holding about the same as last week.

Mercantile Summary.

According to the London Globe, in an orchestra discovered in a convict settlement in Siberia the conductor is a successful assassin, the cornist a retired forger, the saxophone player a garroter, and the assistant drummer a man whose wife passed away suddenly of concussion of the brain. "Execution" is said to be their strong point. The orchestra is known in the locality as a "band of marauders."

It was a significant statement which arrived by cable last week from Berlin, Germany, that the Association of Metal Manufacturers had decided to lock out its employees on October 14th to support the electrical firms whose men are on strike. The patience of capital has been long tried by the unfairness of strikers, and the employers are now

having their turn at combination in hitting back.

On the 11th inst. there were two fires, one in Quebec Province and the other in Ontario, which were both very serious in their results and might have proved very much worse. The first was at Chicoutimi, where a fire, which broke out in a blacksmith's forge, spread and destroyed fourteen dwelling houses, at a loss of fully $25,000. The second was at Marmora, where the St. James' Hotel sheds, H. Warren's blacksmith's shop, McDonnell's store, the Pearce lumber yards, and several other properties were consumed. A high wind was blowing at the time the fire started, but fortunately it began to rain heavily and this perhaps was the only thing to save the town, as there is no fire protection.

⁂

CANADIAN CHEESE AND BUTTER.

The weekly report of the Trade and Commerce Department, Ottawa, makes a quotation from D. Weddel & Company's Colonial Dairy Produce Review, London, in which, it is highly satisfactory to note, not only the quality of Canadian cheese, but the condition in which it has been arriving during the past year in the British markets are highly praised. The depreciation in the general quality of cheese for the previous year was mainly due to the large proportion made before the cows were turned out to grass, and while they were still being fed on dry fodder. During the year just ended the quantity of fodder cheese imported was very much reduced, and its quality was also proportionately improved. The more satisfactory arrangements made by the shipping companies for carrying cheese at lower and more suitable temperatures by means of cool air chambers greatly assisted in both the superior condition and the better quality which was found on arrival during the year. The Dairy Commissioner for the Dominion is given great credit for his labors in educating the cheese-makers of Canada into turning out an improved article, and one more suitable to the requirements of the British markets, as well as for his endeavors to reduce the damage to the cheese in transit. There are still, however, opportunities for both him and the cheese-makers for preventing the damage, and also avoiding the monetary loss, which occurs through "heated" cheese.

Canada, from a variety of causes, is far and away the greatest cheese producing colony in the world, and during the past decade has increased its supplies to our markets by 32,985 tons, and during the last six years by 21,759 tons. It is difficult to ascertain exactly the amount of Canadian cheese imported into the United Kingdom, as during the winter months shipments are made via United States ports, and though our customs returns are excellent, and compiled with great care, yet there is no doubt that large arrivals of cheese are consequently credited to the United States which ought to be entered as Canadian.

The supplies of butter in the Mother Country from Canada are very irregular in quantity from year to year, and, while showing nearly 11,000 tons increase in the past decade, exhibit an increase of less than 1,000 tons for the last six years. No doubt the fluctuations in the price of cheese influence the export of Canadian butter, and, for the year recently concluded, owing to the low price of cheese last year, the export of butter increased by 3,000 tons, the total amount being 12,847 tons, which has only once been exceeded, viz.; in 1903, when it reached 13,238 tons.

The year ended June, 1905, was unfortunately not free from complaints of Canadian butter being far inferior to Australian and New Zealand, while there are no natural conditions that make this necessarily so. It is the fault largely of customs and habits, and defective organization, compared with the colonies of the Southern Hemisphere. Of course, the private separator and the bad practice of churning "collected" cream of different ages are in use in Canada as in some other countries, and the inferior quality of Canadian butter is too often traceable to this source. The Canadian authorities now raise no objection to the reasonable use of preservatives in butter, and it is the opinion of experienced dealers that if butter-makers would use only the best of these, and not those of the lowest price, it would be an improvement.

WHO HOLDS THE CONTROL ?

In all Stock Companies the stockholders retain the full control, even where policyholders have been allowed "a voice" in the direction of affairs; but in a purely Mutual Company such as

The Mutual Life Assurance Co. OF CANADA.

the Policyholders alone elect the Board of Directors, who appoint all the Officers and, therefore, Mutual Policyholders, through the Board, control and perpetuate the efficient management of its affairs.

"Continuity of Management" is desirable only when exercised in the best interests of policyholders.

"The Unexpected Always Happens."

Who is there but has had brought home to him the truth of the above statement? It is always the accident that was least looked for that actually does occur. Nobody is immune from accident. Your experience and observation confirm that fact.

WISE men prepare for such emergencies by carrying an accident policy. The WISEST men see to it that that policy is an Employers' Liability Combination Policy, issued by

THE METROPOLITAN LIFE INSURANCE CO.

(INCORPORATED BY THE STATE OF NEW YORK.)

The Company OF the People, BY the People, FOR the People.

ASSETS, $128,094,315.24

Proof of Public Confidence

This Company has more premium-paying business in force in the United States than any other Company, and for each of the last 11 Years has had more New Insurance accepted and issued in America than any other Company.

The Number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec and Ottawa.

Significant Facts

This Company's Policy-claims paid in 1904 averaged in number one for each minute and a quarter of each business day of 8 hours each, and, in amount, $102.54 a minute the year through.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1904.

391	per day in number of Claims Paid.
6,561	per day in number of Policies Issued.
$1,426,700.50	per day in New Insurance Written.
$114,060.67	per day in Payments to Policy-holders and addition to Reserve
$73,326.8	per day in Increase of Assets.

PRODUCT OF MANUFACTURING CENTRES IN CANADA.

Supplementing what we said last week about wages and the cost of production in Canadian manufacturing industries, we give some further figures and comparisons respecting industrial life in Canada, taken from the third volume, just issued, of the Census of 1901. The number of manufacturing establishments in the Dominion is found to be 14,650, with employees numbering 344,035. This statement would indicate that only about one in seventeen of our population is employed in manufacturing concerns.

It is important to bear in mind, however, that in taking this industrial census the rule was laid down that no workshop was to be considered or counted as a "factory," that employed less than five persons. It will be seen, therefore, that the output of some trades must be vastly greater, and the number of persons employed in them much larger, than the totals here given make out. Bakeries, boot and shoe shops, tanneries, blacksmith shops, and printing offices occur to the mind as illustrating what we have said. It is impossible that the *eleven* blacksmith shops, with $77,974 worth of product, here tabulated, represent all the smithies in Canada. And we cannot but think that 340 wagon and carriage shops, turning out goods to the value of $6,650,000, do not adequately represent the number and industrial value of the shops of this kind scattered over the thousands of towns and villages of the Dominion. It is doubtful, too, whether there are not many more shops than 114 turning out agricultural implements. Certainly we have more than eighteen boat shops, putting out $143,000 worth of boats and canoes, whatever we may think of such a total as 39 places where ships are built and repaired. Such considerations confirm our impression, declared last week, that 334,000 by no means represents the number of persons in Canada engaged in manufactures.

Of the total number of persons industrially employed it appears from the census figures that 44,633, or nearly a seventh, are workers in Montreal factories. It will be a surprise to most people to learn that the factory workers in Toronto, who number 42,515, or one-eighth of the total, so nearly equal the aggregate of Montreal. Hamilton's factory workers are ten thousand, and those of Quebec nine thousand. According to the figures of total wages paid in each city, Montreal's employees are paid more per head per annum than those of Toronto in the proportion of $400 to $364.70, which is something we were not prepared to hear, for the supposition has prevailed that labor was better paid in Toronto than in Montreal. However, it is demonstrated that labor is cheaper in the city of Quebec, where the average is only $330.72 per head per annum, while it is $397.66 in Hamilton; $396.33 in London, and $350.68 in Ottawa. It is plain that Winnipeg must be in a different category from the other cities, for she pays her industrial workers $573.96 per head yearly.

We find the value of the product of Canadian industries during the last census year stated at $481,053,375, a very much increased figure over that of ten years before. But, having in mind what we have said above, a decided addition must be made to the $481,000,000 given as the aggregate product in order to arrive at the real output of Canadian industries in 1901. That they have grown greatly since that date is, besides, evident to any one. Taking the figures as we find them, Quebec and Ontario produced 83.12 per cent, of the whole; that is to say, the output of Province of Ontario establishments, 6,543 in number, was $241,533,486, while the output of Province of Quebec establishments, 4,845 in number, was $158,287,994. The proportion turned out by Ontario was 50.22 per cent. of the whole, and of Quebec, 32.9 per cent. The growth of the country's industries is shown in the fact that for all works having a yearly product of $25,000 and over, the average value of output increased $12,925 from 1881 to 1891, and $20,307 in the ten years from 1891 to 1901.

The following statistics are given to illustrate the relative production of the chief centres of manufacturing:

Montreal stands first. Her value of manufactured products in 1901 was $71,099,750; number of establishments, 932; capital employed, $57,148,661; number of employees, 44,633; wages, $17,810,356.

Toronto second. Value of products, $58,415,498; number of establishments, 847; capital employed, $52,114,042; number of employees, 42,515; wages paid, $15,505,466.

Hamilton third. Value of products, $17,122,346; number of establishments, 230; capital employed, $13,494,953; number of employees, 10,106; wages paid, $4,054,592.

Quebec fourth. Value of products, $12,779,546; number of establishments, 255; capital employed, $9,588,739; number of employees, 9,384; wages paid, $3,103,518.

Winnipeg.—Value of products, $8,616,248; number of establishments, 103; capital employed, $4,673,214; number of employees, 3,155; wages paid, $1,810,845.

London.—Value of products, $8,122,185; number of establishments, 120; capital employed, $6,824,574; number of employees, 5,675; wages paid, $2,249,186.

Ottawa.—Value of products, $7,638,688; number of establishments, 208; capital employed, $10,358,711; number of employees, 6,886; wages paid, $2,414,822.

The cities next to these as manufacturing centres are in order of their importance, Halifax, Saint John, Brantford, Vancouver, Guelph, and Victoria. Of the larger towns the figures will appear later.

* * *

THE LUMBER TRADE.

It is a striking commentary on the era of progress and prosperity on which Canada, in common with several other countries, seems to have entered, that, in spite of the growing use of substitutes for lumber, the demand for white pine is increasing without cessation, and that prices are continually becoming firmer. Houses are now more and more being made of cement; old wooden sidewalks are being replaced by either that material or any one of a dozen others; wooden beams have given place to steel girders. Yet the call for lumber becomes even more insistent. The cause for this, of course, apart from the generally prosperous state of trade and industry is not far to seek. Pine has to be sought further and further away, and the extra expense arising from this fact, together with the high cost for labor and supplies, have put an enhanced value on the product. In the face of this, then, and the firm tone of the market, due to the large demand for building and general purposes, any decline in prices in the future, certainly in the near future, would appear to be out of the question. Since our last report, while there has been little actual advance in quotations, the tendency along this direction in certain grades has been quite marked. Laths, for instance, while still obtainable at the prices quoted a month ago can generally only be had at a 50c. advance. Of other lines, too, in less measure, the same can be said.

The above refers more particularly to Ontario conditions. In Quebec, conditions are not very different. The British Columbia manufacturers of lumber are engaged somewhat intensely in tariff arguments, while they seem to be enjoying a good market for their product. In New Brunswick the conditions are not promising, as our St. John letter of Tuesday shows. Low water has caused many of the mills to shut down. However, the prospects for spruce deals seem to be brightening in sympathy with a better demand from Great Britain.

As to the latter country, a recently received circular from Liverpool states that business at that centre for the past month was more encouraging, the consumption having considerably exceeded imports, and stocks now, generally speaking, being within moderate compass. Some lines have advanced in value, though increased freight rates have partially been instrumental in bringing this result. The arrivals from Canada last month were 25,290 tons register, and from all countries 390,852 tons, or about 9,000 tons in excess for the same period of last year.

The circular, which is from Farnworth & Jardine, then goes on to speak of Canadian lumber thus:—

> Pine Timbers.—Of waney a fair quantity has been imported to both Liverpool and Manchester, largely on contract; the consumption has been satisfactory; stocks are ample, but not excessive; values firm. Square pine has been imported to a nominal extent, and as the consumption has also been very limited the stock remains practically unaltered; prices unchanged. Red pine has not been imported, but as there have been no enquiries for this wood, the stock remains unchanged. Oak logs.—The import has been 25,000 cubic feet, and as the demand has been very limited the stock has increased, but remains within moderate compass; values unaltered. Elm.—The consumption during the past month has about equalled the import, consequently stocks are still on the light side, and values rule at a high point. Pine deals have been imported to about an average extent; there has been a fair consumption with slight fluctuations in values. Red pine deals are not in much demand. Birch logs have only been imported on a small scale, stocks are light, values firm. Planks have again been imported freely, but the consumption has more than kept pace. British Columbian and Oregon pine has not been imported; there has been a fair consumption, stocks are firmly held, values unchanged.

* * *

MR. LARKE ON TRADE WITH AUSTRALIA.

It has been said that no nation ever became great without an export trade. The remark renders particularly interesting the address of Mr. J. S. Larke, the Canadian Trade Commissioner to Australia, before the Halifax Board of Trade, because it was devoted to giving suggestions as to the building up of trade between Nova Scotia and Australia. The products of our Maritime Provinces, which, in Mr. Larke's opinion, would be the ones most likely to appeal to Australian taste or need are fish and fish products, cement, and plaster. The consumption of fish in Australia is about $1,500,000 per year, of which Canada sends only about one-tenth. Mr. Larke thinks that Canada loses a deal of trade with the Island Continent through the absence of direct steamship connection between the two countries. Another suggestion which he made was in favor of a great Canadian exportation company, with a capital of at least $250,000, which could regulate shipments, and take advantage of dull times when manufacturers would be willing to sell at a low price to keep their employees at work, and their machinery in motion. This, of course, is looking to the future, for our manufacturers are not now even thinking of such things as dull times. But Mr. Larke, being an observant man with a memory, doubtless foresees the likelihood of a lull in the present extraordinary activity, and would provide an outlet for the slack period when it comes.

* * *

IMPORTED BANK CLERKS.

A despatch from Montreal has stated that one Canadian bank, the Bank of Commerce, has advertised in Glasgow, Scotland, for fifty junior bank clerks, at a salary of £50 a year, and that other Canadian banks are also negotiating to bring out a number of English and Scotch boys. The number of branches being opened by our banks, especially in the North-West of Canada, renders it needful, we are told, to go outside the country to get men and juniors to man them; and it has been found that Scotch lads, "when caught young enough," make good bankers. The secretary of the bank named when enquired of this week about the matter stated that they had advertised in Glasgow for bank clerks, but not for any specific number, and had not yet received any applications. The fact that this step is being taken by one bank, possibly by more, indicates that some of our banks are likely to relax their regulation which forbade the engagement of any person as a junior bank clerk whose age exceeded twenty. The reason for this rule probably is that when over that age they are less tractable; or having already formed certain counting-house habits which a bank accountant might not approve they would have more to unlearn in order to conform to the methods in use behind a bank's counter.

It may be that one reason for the scarcity of Canadian young men willing to enter banks as juniors is that they deem themselves not well enough paid by the $200 or $250 offered them. And there is an impression among youngsters that they have to dress better and live better if they work in a bank than if they work in a merchant's entry-room, or in a manufacturer's counting-house. Now we have no sympathy with the snobbish notion that a bank clerk because he is a bank clerk is better than any other clerk of equal morals and intelligence. But there is something in the contention, so often heard, that $250 or $200 a year is not enough for a young man to get who is to be sent possibly a thousand miles away from his home, to board at a hotel or private house. That is, if his parents are not in circumstances to assist him—for he will not now-a-days be able to pay his board and dress himself as bank clerks are expected to dress on such a sum. This, we are assured, has been the experience of at least half a dozen young lads of whom we have heard in the last twelve months.

There have been many examples in the ranks of commerce and finance in Canada of men who when young made their way upward by habits of the sternest frugality and industry. We know of some now wealthy and distinguished, who thought it no disgrace to live on oatmeal and herring, cooked by themselves, until their merits enabled them to secure better pay and better food. And we doubt not that even in the present more luxurious days youngsters can be found capable of this sort of self-denial. But they are by no means in the majority. It may be predicted with reasonable certainty that if Canadian banks succeed in getting from the British Islands any considerable number of youngsters at £50 per annum the Scottish members of the group will be found, as has been the experience in other spheres of life more adaptable and more economical than the English members.

Not long ago, a newspaper man, in conversation with the general manager of an important Canadian bank upon the subject of the rapid growth in number of branches, ventured to express surprise that the banks were able to secure trustworthy managers and clerks enough to go round so many branches. "But we don't, hang it all, we don't," was the excited reply of the manager; "we get some of the worst job-lots of men and boys you ever saw or heard of." And their experience is not singular, for merchants and manufacturers have the same complaint. Among the many avenues of instruction that are now open in Canada for lads and young men whose aim is business life it would be well if the training to which pupils are subjected should include attention to the old-fashioned but always essential qualities of respect for authority, willingness to work, courtesy, economy. To these must be added sedulous effort to learn every branch of the profession.

* * *

THE COST OF LIFE ASSURANCE.

There are evidences of uneasiness in the public mind lest some of the weaknesses of administration now being laid bare by the examination of life insurance companies in the United States may be found to exist in Canada. And this apprehension is hardly likely to be allayed without some sort of examination of companies by a competent authority. The revelations made at the New York enquiry, which has been going on for some weeks, have already had the effect of seriously lessening the number of new policies being taken out in the three largest of the United States companies doing business in Canada. And it is quite possible that the fear of extravagance in management of Canadian life companies may deter many from doing what they ought, and are otherwise disposed to do, in securing indemnity for their families or dependents. Life assurance as a beneficent system ought not to suffer from a fear which may be exaggerated, if not groundless, but steps can be taken to remove that fear. If examination in addition to that of the superintendent of insurance at Ottawa will satisfy the doubters, let it be had. Sound companies do not fear it, and unsound ones cannot too soon be uncovered.

Looking over the completed insurance report for 1904 of the superintendent, this week to hand, it is found that there are fifty-three regular life assurance companies reported upon as doing business in Canada besides four using the assessment plan. Forty of these are termed active companies, i.e., those taking new policies. Twenty-one of them are Canadian, seven British, and twelve American. They took fresh risks, amounting to $98,306,000 in that year, and their aggregate of assurance in force exceeds $587,000,000, an increase of nearly $40,000,000 over 1903. For every $100 premiums received there was paid to policyholders $49.01, leaving $50.09 to be carried to reserve, expenses, and profits. This leads us to remark upon the expenses of companies, a direction in which we are convinced economies are practicable. Out of more than fifteen millions of dollars paid for net premiums to Canadian companies last year, almost one-third went for expenses of conducting the companies. That is to say, 32.08 per cent. of the total premium income and 25.46 per cent. of the total income was thus absorbed. So much should not be necessary. Half the amount is found sufficient for the purpose by companies in Great Britain, and we do not see how Canadian companies should need double what they find ample. Different elements that enter into various phases of the business make it unfair to apply the same test to all, namely, the percentage of expenses to income. But out of twenty companies we may take half, and compare their ratio of expense. The newer companies are at a disadvantage in such a comparison, and industrial companies must necessarily be at greater expense. Still we compare the older and larger companies as under, giving total income and total expenses, and noting the percentage in each case. They are placed in the order of their gross amount in force:

	Total income.	General expenses.	Percentage of expense to income.
Canada Life ...	$4,293,689	$921,600	21.46
Sun Life	4,561,798	1,098,971	24.09
Mutual of Canada	1,725,308	300,095	17.38
Confederation ..	1,702,799	331,402	19.46
North American .	1,504,063	395,406	26.28
Manufacturers ..	1,659,107	394,645	23.78
Great West	796,209	221,877	27.86
Imperial	708,975	228,105	32.15
Federal	617,853	171,006	27.67
Dominion	206,763	50,127	24.24

The Great West and the Imperial, being younger companies, must be expected to have a larger ratio of expense than older ones. The like may be said of the Excelsior and the Home Life, which are not in the above list. The London would probably show a smaller ratio but for its large share of industrial business. Of the ten companies listed above, the average expense is 24.43 per cent. of the total income. The lowest being 17.38, and the highest 32.15. The question is not unnatural why the expenses of the Canada Life are larger than those of the Mutual Life, or the Confederation Life, both of which are younger companies. The still larger ratio of the Sun is to be accounted for, we presume, because it does business in so many distant parts of the world where its Canadian competitors have not penetrated. It is to be remembered, besides, that the Canada, the Confederation, the Imperial, the Manufacturers, the Mutual, the North American, and the Sun all do business outside the Dominion, and this adds to their expense ratio. We happen to know that the managers of some of our life companies are very desirous to lower their ratio of expense, but the fear of losing business appears to deter them from any decisive step in reduction of commissions, and what not. The present is a good time to make resolves in the direction of economy where economy is needed.

* * *

ENGLISH JOINT STOCK COMPANY LAWS.

Notwithstanding the many amendments which have been made in recent years in the British statutes regarding joint stock companies, there are still a great many needed, if we are to judge from several of the speeches which were made at the autumnal conference of the Incorporated Society of Accountants and Auditors in Sheffield last month. The basis of the present laws on the subject was, we believe, laid as far back as 1862, but since then, from time to time many serious defects have been discovered, which have been remedied so far as the wisdom of Parliament could direct. As recently, however, as the year 1900 it was realized that a thorough over-hauling of the regulations was still highly necessary.

Companies much over-capitalized, burdened with a goodwill account out of all proportion to their capacity to earn profits, and left by their founders in numerous instances with insufficient working capital, continued to be launched, and the shares subscribed for by a too-confiding investing public. There being no need to disclose in detail exactly what the company was formed to purchase, this over-capitalization was rendered simple; hence we read of nearly a million of money being realized as the profit of the promotion of one scheme. Companies, too, were re-formed, a million pounds or so added to their capital and offered to the public, who, fascinated by a popular name or article, subscribed for the shares, never pausing to think that they were buying the same concern carrying on the same business, with possibly a slightly-increased turnover, but certainly not enough to justify the amount of increased capital. Another serious defect was the power possessed by directors of companies to proceed to allotment, with manifestly not enough money to successfully carry on the business—a defect productive of much loss to the investor.

The Act of 1900 certainly did much to minimize these evils; it served also to reduce very considerably the number of companies launched. But even it did not render the regulations perfect from an investor's point of view, as was set forth in an address to the conference by Mr. A. E. Woodington, of London. For instance, he stated that, while the object of ordering the filing of returns by allotment, and of notices of statutory meetings, etc., was to enable a shareholder to see exactly what has been done with the money subscribed, and what amount is left to provide working capital for the business, this object was by no means always attained, the reports being sometimes issued in such a way that, though meeting the letter of the law, they were altogether lacking as a means of real protection for investors.

Another matter taken up by the gentleman before mentioned, was the qualification of directors by a direct holding in their company. In his opinion, this is a provision which does not mean a great deal. It is held, of course, that a substantial stake in any undertaking is the best guarantee of fidelity to the company's interests. But a compulsory investment by a director of, say, £500 in a company which has a capital of half-a-million or more, does not guarantee fidelity any more than it does competency or business ability. Another matter which is becoming of serious importance is the personal liability of directors. Numerous actions have been taken in recent years for non-disclosure of material facts in prospectuses, and many with success. Considering the difficulty of deciding what may ultimately prove to be material, responsible men are often deterred from accepting office.

Mr. Woodington makes a plea for the simplification of the whole code of laws regulating joint stock companies in England. It has been generally recognized that the status of the law in that country is in a better condition that it is in Canada. Eternal vigilance is the price of safety in this as in other matters, which shows that our law-makers in this country would do well to follow closely the march of events in company legislation in the Mother Country, which has had a vast experience.

* * *

THE MOLSONS BANK.

It is interesting to remember, when reading the account of the annual meeting of the Molsons Bank on Monday last in Montreal, that this well-known institution is now fifty years of age, having been founded in 1855. And a number of the particulars given by the president in his comparison of that day with the present in the history of Canadian banking are of a striking character. For instance, the doubling of the number of banks and the remarkable increase in branches; the increase in banking capital; the growth in bank deposits from $11,000,000 to $533,000,000 in fifty years, and the accumulation of some $117,000,000 of further deposits in the hands of other financial institutions. Indeed, the career of the Molsons Bank itself is an example of noteworthy growth for its capital is now ten times what it began with, and the reserve, $3,000,000, is equal in amount to the capital, while it has forty-eight branches in five Provinces of the Dominion.

Turning now to the report of the latest year, namely, that ended with September, we find the circulation to have been large, within $100,000 of the limit, indeed; loans, $21,308,000, compared with $19,820,000 last year; net profit, though less than in the preceding twelve months, is at the rate of 13.3 per cent. Assets have now reached $30,000,000, of which $11,500,000 is in liquid form. The dividend has been raised to ten per cent. per annum. Usual contribution is made, and properly, to the Pension Fund, bank premises account being now $400,000 instead of $300,000. The setting aside of $29,000 as a special bonus to officers is an act of the management which will find approval outside as well as inside the bank's doors. The position which the institution has now reached is a marked illustration of the growth of Canada, and places the Molsons Bank still more firmly among the group of prominent financial institutions of Montreal.

* * *

AN ERROR ABOUT LONDON'S "FIRE PROTECTION."

A widely quoted interview in the newspaper press stated that Mr. Edward Atkinson, the well-known Boston fire expert,. had, during a recent visit to London, Eng., predicted another great fire in that city, and that he had reflected in contemptuous terms upon the present London fire protective service. Mr. Atkinson himself now says he had no such interview, and made no investigation whatever of that city's present fire service. It is true that some years ago he examined the National Art Gallery, and, in his report on the subject, referred to several points wherein the hazard for fire was great. These dangers have, however, been now removed. With regard to the capacity of fire hydrants in London, they would be considered, says Mr. Atkinson, as quite inadequate from an American standpoint, and the power of the engines was low; that is to say, at the time he made his former visit. Since then, however, he believes great improvements have taken place, and, besides that, the buildings are comparatively low in height. which makes a great difference, indeed, when comparing the relative efficiency of the service in the two countries. One strong advantage possessed by the London fire authorities, who, as Mr. Atkinson admits, have a most excellent organization, is the fact that the inspection of buildings is under the general direction of the London County Council, and members of the fire brigade have direct power to act as inspectors of theatres, tenement houses, etc. Mr. Atkinson adds, speaking of his own country, the United States: "We shall not remove the danger of excessive loss or of conflagrations until the service of the fire department is put under the charge of trained men, who can act and organize as they have in London, and who shall have authority to enter and inspect premises, and in some direct way compel attention to their suggestions."

* * *

LIFE ASSURANCE NOTES.

A new office building is soon to be occupied by the London Life Insurance Company as a head office. It is Wellington Street, near Dundas Street, London; frontage, seventy feet by forty, and will afford needed room for the office staffs and agents in both the industrial and ordinary branches of the company's business. An illustration of the new building appears in the London Life Monitor for the month of October.

Every effort should be made by the reputable press and by conscientious and intelligent speakers, says the "Burlington Hawkeye" to disabuse the minds of the small policy-holders in those great assurance associations of any idea that the companies are in the slightest danger of failing to carry out their contracts with them. It should be pointed out to such people that the loss occasioned by their withdrawals will fall, if at all, on the multiplied thousands of men who have worked and saved to carry an insurance policy for the benefit of their families, while the larger policy-holders, keeping their premiums paid, will not only realize the face value of their policies, but share in the increased dividends, increased at the expense of their shortsighted fellow-investors who withdrew.

We learn that Mr. Arthur J. Hughes, who has been for several years actuary and secretary of the Crown Life Insurance Company, has resigned his position in Toronto to accept that of secretary and actuary of the China Mutual Life Assurance Co., headquarters at Shanghai. Mr. Hughes has had some years' valuable observation and practice since he left the Manufacturers Life to take more responsible positions, first with the Insurance Corporation of Ontario, and next with the Crown Life. He had been well grounded in both the theory and practice of underwriting, and took care to add to his experience in his later positions. Some of the China Mutual people, wanting a good man, came over to Canada to find one. And we believe they have secured a good man in Mr. Hughes; though it is a little hard on the Crown Life authorities to take away from them a man who has helped to found the company and to build it up into popularity.

A curious side-light concerning workmen's compensation awards, and what becomes of the money, has been shown in the County Court, presided over by Judge Emden. He recently remarked that the duties cast upon him under the Workmen's Compensation Act had given him a considerable insight into the results of widows starting small businesses. His experience, both under the Act named, and in connection with the general work of his courts, showed that widows starting small businesses almost invariably failed, and lost everything. Not only is the Act very difficult to administer, but it would also appear that after awards had been made the persons whom it was primarily intended should be assisted, through ignorance of the value of money or how to invest it, become worse off than ever. It would be much better if the Act could be so amended that this compensation money should be administered safely and profitably on behalf of the recipients. —London Review.

Mr. Justice Doherty delivered a judgment in Montreal a few days ago of interest to the insuring public in regard to the practice of paying life insurance premiums, particularly first ones, by a note. A Mr. Chas. Kool, it seems, entered into an arrangement by which he was to take out a policy for $10,000, and give the agent a note for the first premium, which note was not to be paid in cash, but was to be "worked out." Shortly afterward he contracted spinal meningitis, and died before the note fell due, although he was under the impression that his life was fully protected to the extent of the policy. The company refused to recognize the policy, and, on the widow suing to collect it, the judge took the case from the jury on a point of law and dismissed it with costs against the widow. The judge drew attention to the fact that, under the terms of the policy the contract did not come into effect until the first premium had actually been paid during the good health of the insured. But not only did the evidence show that cash had not been paid, but that the note was to be paid for in the shape of solicitation work.

Mr. Nelson B. Smith has been added to the Halifax board of the London and Lancashire Life Assurance Company in the room of the late Hon. John F. Stairs. The board now consists of Messrs. Hector McInnes, J. C. O'Mullin, Walter Mitchell, H. R. Silver and Nelson B. Smith. At the last board meeting in Halifax the general manager of the company, Mr. B. Hal Brown, referred to the new business of the present year up to end September as showing an increase of 20 per cent. over the same period in 1904.

FIRE INSURANCE MATTERS.

Paterson, N.J., proposes to abolish the floor watch in all local fire engine houses. Last June, when a reduction of 15 per cent. was made in insurance rates, one of the considerations was that the floor watch system should be introduced and maintained. If that sort of tactics is countenanced in Paterson, the insurance companies ought to be able to meet it without much trouble.—Investigator.

Agents of stock companies in New England are becoming considerably disturbed over the enormous loss of business to the "factory mutuals," estimated at $10,000,000 in the last two years. The alleged causes are various according to the losers, among them being lower rates and friction with rating committees and special agents. The mutuals write the business sometimes at 16 to 20 cents a hundred under the stock rates. Of course, they employ no brokers, and thus save their commission of 15 to 20 per cent.—United States Review.

A very considerable business is shown by the Richmond, Drummond and Yamaska Mutual Fire Insurance Company, whose year lately closed, the revenue having reached $90,000. The losses by fire were $43,000 odd. Both revenue and losses were the largest in the history of the company. The assessment levied to cover the losses and expenses is, we are told, the same as last year. Mr. F. Prefontaine was re-elected president, Mr. C. C. Cleveland vice-president, Mr. McCaig manager and secretary, Mr. Bothwell general inspector, and Directors Jones and Lyster the Executive Committee.

One of the old mutual fire insurance companies of the Province of Quebec is the Missisquoi and Rouville. Its seventieth annual report tells us that the number of risks in force on the mutual system was 4,165, and under the cash system 730, a total of 4,895, insuring $5,187,059. The premiums and assessments amounted to $25,777, and the losses to $9,871, a ratio of 38.3 per cent. The total expense was $9,688. The assets amount to $117,223, of which sum $51,535 is municipal securities, and $14,950 cash, the remainder being composed of premium note capital, etc. Mr. H. B. Mussen has left the employ of the Canada Atlantic Railway, and has formed a partnership with Mr. W. T. Stewart to engage in insurance brokerage at Montreal.

DRY GOODS NOTES.

Mr. W. Smith, of Philadelphia, Pa., proposes to start a hosiery factory in London, Ont.

Owing to dullness in the Kidderminster carpet trade it is said many weavers are on their way from that town to Canada.

A bulletin issued by the Census Bureau at Washington shows the production and distribution of the cotton of the United States available between September 1, 1904, and September 1, 1905, to be 14,455,994 bales. Of this, 61 per cent. was exported, 30 per cent. was used in domestic consumption, leaving a surplus of 9 per cent.

It is now stated in Montreal that the attempted absorption of the Montreal Cotton Company by the Dominion Textile Company is "off" for the present, the shareholders of the former having listened to the advice of men prominent in their management to pool their holdings in order that they might be sure the combine should not obtain control.

From a study of conditions in the fine dress goods trade it looks as though the most popular colors for fall will be greens, reds, plums and purples. Broadcloths are general favorites. For spring there is a leaning toward taffeta batiste. High-class eoliennes are doing well, both in the plain weaves and fancy designs. The demand for immediate delivery runs to broadcloths, panama weaves, serges, henriettas and similar plain materials and a few plaids. Suitings in black and white worsted effects are in demand also.

FOR GROCERS AND PROVISION DEALERS.

" 'That lady who just went out—didn't I hear her ask you for fresh-laid eggs?'

" 'Yes, sir,' the clerk answered.

" 'And you said we hadn't any?'

" 'Yes, sir; that is correct.'

"The grocer, purple with rage, yelled: 'Didn't you see me lay those eggs myself on the counter not ten minutes ago? You are discharged, you mendacious scoundrel, and see that you don't look to me for a reference, either.' "

The Moyune Tea Company, Limited, is the name of a company which has just been granted by the Ontario Government a charter, authorizing it to purchase the business now carried on in Toronto by A. H. Pepall and H. P. Nasmith, and to import and buy and sell teas, coffees and groceries.

The British Columbia Government has decided to be represented in the various fruit exhibitions in England this year, and not only this, but to send large commercial shipments for distribution and sale at various points. A special commissioner will be sent out having these in charge. The Canadian Pacific Railway will co-operate by giving free freight to Montreal.

Very good reports continue coming to hand regarding the volume of live stock shipments from Alberta. A press despatch of 16th inst. said that nearly fifty thousand head will have been taken from the ranges before the season closes. The stock will go in better condition than for years, because of the abundance of grass. The prosperity among the farmers and stockmen can be understood in the light of statements by implement men that five times as much was collected last month on machinery notes as was collected for the same time last year. One firm has outstanding in Alberta $300,000 of these notes, and the payment before maturity to save three months' interest has been very large, and so it should be.

A paragraph from the report of Mr. A. MacLean, Canadian agent in Japan, which appears in the weekly report dated 9th October of the Department of Trade and Commerce, Ottawa, reads as follows: "Owing to warmer and more settled weather since the beginning of September the shortage of the rice crop, which was at one time estimated at about 20 per cent., will be materially decreased. According to investigations made by the Department of Agriculture and Commerce, the rice crop throughout the country this year is estimated at 40,292,653 koku (one koku nearly five bushels), which shows a decrease of 9.1 per cent. compared with an average year. It is, however, yet premature to form an estimate nearly accurate."

A large Minneapolis milling firm, the Pittsburg-Washburn Co., having been requested to give a close and expert examination into some samples of No. 1 red winter wheat grown in Alberta, and having yielded at the rate of thirty-four bushels per acre, gave its opinion to the effect that it was a very fair quality of milling wheat for some purposes, but that the percentage of gluten was lower than the spring wheat raised in the north, and also the quality and color of the gluten were somewhat lower. The color of the flour made from this wheat would be of not so good a quality as that from spring wheat. However, admits the firm, it is a good bread-making flour if properly used, and if it can be raised on a yield of thirty bushels to the acre should be a very profitable crop to the farmer, and would find a ready sale to millers at a fair price.

Not much satisfaction can be found in the results of recent shipments of Canadian eggs to Great Britain. As a matter of fact, comparatively few have gone forward, owing to the high prices prevailing in the country markets, which are practically on an equality with what Irish and Russian eggs are selling for in England. It is stated that French eggs of finest quality, which are probably quite equal to the best ever sent from this country, have been selling in Bristol at 8s. 6d., while holders of Canadians have been asking 9s. 3d. Some lots of Canadian eggs received lately in Manchester were put in cold storage, awaiting a better market. In a few cases 9s. 3d. has been obtained, but it was only owing to a temporary local scarcity or some other ephemeral cause.

* * *

GALT BOARD OF TRADE.

On Tuesday evening last, 17th inst., was held in the council chamber of that town the annual meeting of the Galt Board of Trade. The attendance was good. The retiring president, Mr. Jos. Stauffer, gave an address reviewing the work of the year, and commenting upon the substantial growth of the town during that period. A deputation were appointed to wait on the Ontario Government to protest against the proposed amendment to the County Councils Act, and to ask for an amendment to the High Schools Act, whereby townships shall be asked to contribute a fair proportion towards the capital expenditure for high schools and collegiate institutes. Officers were elected as follows: President, J. H. Fuyer; vice-president, F. S. Jarvis; secretary, A. J. Donaldson; treasurer, James E. Warnock.

* * *

OUR SAINT JOHN LETTER.

Members of the Provincial Government and prominent lawyers from New Brunswick are at Ottawa this week arguing before the Secretary of State a matter of great interest to the people of this Province. At its last session the Legislature of New Brunswick granted a charter to the Grand Falls Power Company, Limited, an American syndicate, who put up a deposit of $50,000 as a guarantee of their bona fides, and agreed to develop the water power at Grand Falls, to go into the manufacture of ferro-manganese from bog ores, to develop electricity for light and power purposes, etc. Some years ago similar rights had been granted Senator Redfield Proctor, of Vermont; Sir W.m C. Van Horne and others, but they never acted under their charter, and the time given them has now expired. Last winter these parties obtained at Ottawa etters patent under the same name as the company incorporated by the New Brunswick Legislature. Now the New Brunswick company is seeking to have the Secretary of State change the name of the Ottawa company, while the Ottawa incorporators are asking that the charter granted by the New Brunswick Legislature be disallowed on the ground that it has not the control of the waters of the river. If this latter contention is successful, the rights of he provincial company will be cancelled. The Government of New Brunswick has no doubt of the bona fides of the company it incorporated, and say that development work on an extensive scale has only been delayed pending a settlement of the questions in dispute. It is ten years ago since the other company first secured rights, and up to the present nothing has been done to develop the water power, which is one of the finest on the continent, using the majestic body of the River St.John.

There is very little likelihood of the big lumber mill at Tracadie, burned last week, being rebuilt. The mill was a thoroughly well-equipped one, but it is understood that the timber lands in the vicinity were pretty well exhausted. Another mill recently destroyed by fire and not likely to be replaced is that of Messrs. Donald Fraser & Sons at Fredericton. By the Tracadie fire the insurance companies lost upwards of $120,000, but the actual loss to the owners is said to have been much greater.

A number of St. John merchants have taken legal proceedings to obtain possession of goods claimed by them, but held by the Sayre Company at Sussex. Recently Abdallah Sayre, an Assyrian, doing business at Beersville, failed. It is claimed that he had purchased goods worth upwards of $8,000, and that when a fire came before the assignment he collected some $1,500 insurance and $1,200 more on the building, all in the name of his wife. Soon after his assignment the Sayre Company at Sussex was formed, the members being Mrs. Sayre and other relatives of Abdallah aforesaid. The St. John merchants claim that the stock with which this company started is the same that they shipped to Abdallah before the fire, and on which the insurance companies paid insurance. Upon making enquiry, St. John merchants identified their goods, and Montreal parties who sold to Abdallah Sayre shortly before his failure have been asked to send men down for the same purpose. While this is not a new form of swindling, the present appears to be a particularly glaring instance.

The city of St. John has awarded Messrs. D. W. Clark & Son a contract for $145,337 to build a new deep-water wharf for the accommodation of steamers coming here for the winter port trade. This wharf will be ready for the winter of 1906-7, and will, it is expected, be first used by the big new boats of the C.P.R. fleet.

There is much speculation here over a visit paid the city on Saturday by Mr. McGuigan, of the Grand Trunk. He was accompanied by Prof. McLeod, of McGill, and together they visited and carefully inspected all the terminals of both the I.C.R. and C.P.R., getting figures as to the sizes of sheds, warehouses, etc., and much other valuable data. What does it mean is the question now asked on all sides.

William H. Murray, one of the leading lumbermen of New Brunswick, and head of the lumber firm of Murray & Gregory, who died a couple of weeks ago, left an estate that has been probated at $615,000, and that is expected to reach nearly the million mark. This is a very large estate for this Province. It all goes to relatives. Mr. Murray was an unmarried man.

The lumber situation in New Brunswick continues serious. Quite a number of the saw-mills have been shut down, and some are being dismantled, the owners having come to the conclusion that there is no likelihood of a sufficient rise of water to bring out logs that were hung up because of the small spring freshet.

The Royal Bank of Canada opened on Monday a new branch in this city in the north end. The Royal has also made definite announcement that it is the purchaser of the McLaughlin Building, on King Street, and will tear it down to put up a modern bank building. Some of the tenancies run for seven years, so it may yet be a long time before the promised new building materializes.

The wireless telegraph station on Partridge Island, at the mouth of St. John harbor, has just been completed, and is now sending and receiving messages.

That a New Brunswick company can go out into the markets of the Dominion and successfully compete for trade with the concerns in the large centres is seen in the success that is attending the operations of the Hartt Boot and Shoe Company, of Fredericton. Its spring business was thirty per cent. greater than last year, while the fall shipments are reported the heaviest in the history of the company. At the annual meeting a few days ago a substantial dividend was declared, and the outlook for the future is said to be unusually bright.

St. John, N.B., 17th October.

* * *

—Among those houses making enquiries relating to Canadian trade at the Canadian Government Office in London are a London firm making glues, gelatines, varnishes, sizes, paint removers, etc.; an English house producing perfumery of good quality; a London firm which makes camel hair brushes and hog hair paint, varnish and enamel brushes; and a correspondent at Turin, Italy, has asked to be placed in touch with Canadian exporters, as he is seeking to extend the trade between Italy and the Dominion.

* * *

—The annual meeting of the shareholders of the Dominion Iron and Steel Company took place in Montreal on the 18th inst., with Mr. J. H. Plummer, the president, in the chair. An important feature was the announcement of the resignation of Mr. Frederic Nicholls, who did much in carrying the affairs of the company safely through a hazardous time. It is understood, indeed, that his acceptance of the onerous office of vice-president was due to his desire to help in pulling through a great Canadian industry. To-day, the prospects of the concern appear bright. The forecast is made by a leading ex-official of the company that the time is not far distant when the mills will be turning out 800 to 1,000 tons of steel rails per day. Mr. Plummer stated at the meeting that the finances of the company during the last four months showed a very satisfactory record. The following is the board of directors for the ensuing year: Messrs. R. B. Angus, Hon. Geo. A. Cox, H. F. Dimock, Hon. L. J. Forget, Hon. Robert Mackay, Hon. D. McKeen, Wm. McMaster, F. S. Pearson, Col. H. M. Pellatt, J. H. Plummer, Frederic Nicholls, W. B. Ross, Elias Rogers, Sir W. C. Van Horne, H. M. Whitney and E. R. Wood.

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ended with Thursday, October 19th, 1905, as compared with those of the previous week:

	Oct. 19.	Oct. 12.
Montreal	$28,395,161	$31,031,868
Toronto	22,871,302	23,929,081
Winnipeg	9,704,142	10,288,067
Halifax	1,861,439	1,859,261
Hamilton	1,428,960	1,528,900
St. John	1,220,905	1,149,480
Vancouver	2,166,150	1,776,274
Victoria	803,262	797,207
Quebec	1,620,065	1,617,962
Ottawa	2,676,454	2,347,936
London	1,119,137	994,720
Total	$73,866,977	$77,320,756

Vault doors in Bank of Montreal and Royal Trust Company, Montreal Three times larger and heavier than any other in Canada. Doors and Vestibules weigh **60 tons**. Total weight of lining and doors **260 tons**. Accepted to be the finest piece of vault work in construction and workmanship in the Dominion. — Built by the old established firm of

J. & J. TAYLOR, Toronto Safe Works, Toronto.

Established 1855.

BOOKS RECEIVED.

We have received a copy, in pamphlet form, of an address upon the subject of "The Benefit of a Real Estate Department to a Trust Company." This address is one made by Lorenzo E. Anderson, vice-president of the Mercantile Trust Company, of St. Louis, at the convention of the American Bankers' Association at Washington last week.

The prospectus of Moody's magazine reaches us. It is intended to be a monthly review for investors, bankers, and men of affairs, edited by Byron W. Holt, and published by the Moody Corporation, 35 Nassau Street, New York, at $3 per year. The proposed contents of the October issue are, a symposium upon the increasing supply of gold; the break-down of the Russian financial system; the present time of prosperity; pitfalls of speculation as shown by the analysis of 500 actual accounts.

* * *

Mr. J. F. M. Stewart, assistant secretary of the Canadian Manufacturers' Association, was entertained on Tuesday evening last at a complimentary dinner in the National Club on the eve of his marriage. By way of marking their respect for his work and their esteem for the man, a large number of his friends in the Association presented him with a number of pieces of furniture Mr. W. B. Tindall, chairman of the Toronto branch, was in the chair, and among the speakers were:—Messrs. P. W. Ellis, W. K. George, J. F. Ellis, J. P. Murray, T. A. Russell, W. P. Gundy, S. M. Wickett and R. A. Donald, who was secretary of the banquet committee.

EDUCATION IN QUEBEC.

At a banquet to Hon. Adelard Turgeon, one of the Province of Quebec ministers, there was some good speaking, both by the guest of honor and by some of those around him at the table. One of the Provincial members present, Mr. G. Langlois, declared his desire to have in the Government of the Province a committee on education, and he also advocated the founding of an educational department under a responsible minister. French Canadians, he declared, must have a better practical education. Major G. W. Stephens, of Montreal, made a speech full of sense and suggestion. In the course of his address the Major said:—

"We are in the Province of Quebec, in round figures, two millions of people, of whom 1,600,000 are the descendants of old France, and 400,000 are the descendants of old England, Ireland, and Scotland. We have a Provincial Government that is divided into several departments for the supervision and management of finance, mines, crown lands, fisheries, and public works.

"We hand over to a body of eminent men, called the Council of Public Instruction, the trust of providing education for two millions of people, and we give them $210,000 per annum to work with. The Council of Public Instruction never meets as a body, but its two committees meet together twice a year and spend just four days in deliberation upon the most important factor in our national existence.

"Female teachers in the Province of Quebec in rural districts receive an average wage per day of 32 cents, and male teachers an average of 44 cents. We pay our bricklayers 65 cents per hour; we pay our plasterers 45 cents per hour; we pay our carpenters 35 cents per hour; we pay our plumbers 35 cents per hour, and we pay our teachers, who are to give these people their education, less *per day* than these people earn per hour.

"What is the remedy?"

"We want education to become the free inheritance of every child born in the Province and for every child that comes to help in its building. We want to create a public school system that will pay its teachers a living wage and make the profession of the teachers throughout the length and breadth of this land an honorable calling in the eyes of the people. We want to create technical schools for the artisan, so that Canadian skilled labor can take its place along side of any other. We want to create an agricultural school that will compare with that in operation in our sister Province of Ontario.

"We want to have our people realize that education means prosperity, happiness, mutual confidence, greater comfort of the home, cleaner streets in our cities, better roads throughout our Province, integrity in our business transactions, less crime and ignorance. We want our people to realize that the more money we put into public schools, the less we will put into prisons and asylums and hospitals."

* * *

THOUGHTS FOR COTTON MANUFACTURERS.

The cotton manufacturing industry is the life-blood of a large and very thickly populated portion of Great Britain, and it is one of the most important industries of other countries as well. Moreover, during the last two years in particular it has, perhaps, through manipulations and dramatic ups and downs in its raw material, drawn more general public attention to itself than any other branch of manufacture. It will, therefore, not be out of place to make some reference to the proceedings of the New England Cotton Manufacturers' Association at its convention a couple of weeks ago in Atlantic City, N.J. Much of the speaking was, as is natural, devoted to a "boosting" of the American cotton manufacturer, his works and ways, and to estimates of how long it will be before the United States shall have left Great Britain hopelessly in the rear as a great manufacturing country. Nevertheless, there was much good meat in several of the addresses, the speakers of which were not afraid to point to existing evils and abuses in the manner whereby cotton futures are manipulated to the detriment of not only the manufacturers and the consumers, but to the producers of raw cotton themselves.

Speaking of exports of cotton goods from the United States, Mr. J. R. MacColl, the president of the Association, stated that up to the present they have been mainly in coarse, heavy goods, on which the element of labor is small and the output large. On this class of fabrics American mills can successfully rival European mills. On other fabrics careful investigation shows American costs to be 10 to 50 per cent. more than foreign, according to the labor involved in production and the degree of success attained in inventing or utilizing labor-saving devices. With an average duty of over 50 per cent. collected on manufactures of cotton during the year ending June 30, 1904, the imports amount to $50,000,000, foreign value, proving conclusively that many fabrics can still be produced abroad at a cost 33 1-3 per cent. less than here. A comparison of the exports of the United States and Great Britain by classes of goods shows that the former's principal business has been in grey and bleached goods, and that in the other classes which involve the complications of color and design American manufacturers have done hardly anything. The future opportunity, therefore, lies particularly in the latter classes.

A topic which was of peculiar interest to all was the efforts which are now being made by Great Britain, France, Germany and other nations to grow cotton on a commercial scale in countries other than the United States. The words of Mr. MacColl in this connection are noteworthy:

> We should prefer to see an ample supply of cotton for the world's needs raised in our own Southern States. In my judgment, the South will make a grave mistake if, by wilful reduction of acreage, it fails to grasp its opportunity to provide the world with a sufficient supply of cotton at a reasonable price. . . . It cannot be good business judgment to encourage competition by the unsound economic policy of reducing the production of a great staple that the world needs in order to obtain an exorbitant profit. The scheme to market the cotton crop throughout the year at a steady price is an excellent one, and we hope it can be carried out.

And still another form of competition may have to be faced. If cotton can be grown at from 5 cents to 6 cents per pound, and by curtailment of production the price is to be maintained at 10 cents to 11 cents, there is every inducement for large manufacturers to combine together and grow their own cotton. They would in this way get their raw material at cost price, and, in addition, save themselves from the anxiety and possible loss incidental to its purchase. A mill of 200,000 spindles using 25,000 bales of cotton per annum, by growing its own cotton at a cost 5 cents per pound less than the market price, would effect a saving of $625,000, or over $3 per spindle, which would pay 20 per cent. annually on the cost of an American mill. Here is something for the manufacturers of the Southern States to think about.

RELUCTANT INFORMATION.

Editor Monetary Times:

Sir,—We enclose an original letter, just received, from Michel Bilodeau, of Cocagne, N.B., who has been acting as assignee in the matter of the estate of D. L. Goguen, of Cocagne, N.B., a retail merchant.

Goguen assigned June 21, 1905, and Mr. Bilodeau was appointed assignee. After repeated letters, in which we asked what had been done with the estate, etc., we finally received, on September 29th, a first and final dividend of 6 1-5 per cent., namely, $5.12, less six cents deducted for postage.

Our

Henry Carter
Stiff Hats

Are sold in the various colors, and are made in four different qualities at prices to suit your trade. It is acknowledged to be a perfect gem by the hat critics.

Wilkinson
Soft Hats

Are beauties and a trade bringer. Their fine quality and popular price give them a precedence over all other. It will astonish you how your trade will grow if you place this line on your shelves.

Our Straws and Cloth Caps
for men and boys are just right. We have a splendid variety and at prices that will give good profits.

We again wrote Mr. Bilodeau, asking him to give us a proper statement, showing the assets, liabilities, cost of distribution, list of creditors, etc., and in reply we received the enclosed letter, which speaks for itself. We are sending it on to you, thinking it may interest your readers, because so many people now are assigning to local lawyers or assignees all over the country, and it is simply impossible to get a satisfactory report from the assignee. Kindly return the letter if you have no use for it.

This sort of thing is going right on in Ontario, to say nothing of the North-West.

Truly yours,
E. Boisseau.

Toronto, 13th October, 1905.

Here follows the letter to which Mr. Boisseau refers. It is brief, and very, very cool. Possibly, however, Mr. Bilodeau considers that he is not paid for sympathy, so he does not waste any. Also, that he is under no obligation to go into particulars about costs, as distinguished from the bill of sale. It is well that the claim was so small as $82.65, else it might have been worth while to exact a little more information from this assignee.—[Ed. M. T.]

Cocagne, N.B., Oct. 9, 1905.

E. Boisseau & Co.

Sirs,—In regard of estate of D. L. Goguen:

Amount of sale	$235 74
Bill of sale and cost	200 65
Leaving	$ 34 09
Amount of claims	$566 30

I hope you will understand now where your money has been lost.

M. Bilodeau.

NORTH OF ENGLAND LETTER.

Perhaps readers will supply their own explanations of a common matter of fact. One has noted how people here exclaim: "But how he has improved!" whenever one of their kin returns from Canada for a sojourn with his own folk, or when a really informative letter from him is received. There may be exceptions. A few immigrants may improve none, or may even change for the worse in the new land. But we, who are able to make comparison, find that physical, mental and material progress is the rule with them. The case is the same with city as with country people, and in all stations of life. Men who seem to have sucked life dry in this country return from Canada humanized and rejuvenated. What the secret is, and whether it is a Canadian possession exclusively, one does not pretend to say. Suffice it to note the fact, and to turn it over to philosophers to digest. Certainly the influence of the Canadian spirit on the mind has very important effects upon business.

Between the Crockville Convention of the Trades and Labor Congress of Canada and the Brick Lane branch of the United Grand Junction Ebenezer Temperance Association there is at least a certain kinship in name. The resolution of the Crockville convention, avowing loyalty to the British Trades Union Congress and its opposition to the Chamberlain programme has been duly published. What the representative quality of the Canadian Congress may be one does not know, although one has had opportunity to assess its British counterpart at its right value. Latterly the British Congress has gained weight in politics. Whether it will lose power now that it becomes more definitely socialistic remains to be seen. In the airiest manner the delegates trade votes between themselves which aggregate to millions, and profess to register the opinions of the masses. As a matter of fact, the British Congress represents little more than the opinions of a few paid and unpaid officials. Some of these are men of capacity and some are mere wind-bags. In any case, none of them has the right to speak authoritatively for the shadowy hundreds of thousands of votes in the background; and the English artisan is not the man to have his opinion cut and dried for him by the leaders of his trade associations.

Severe things have been said about Professor Mavor's report on the North-West by Mr. W. L. Griffith, the Secretary to the High Commissioner. Those who are opposed—to use their own words—to the project of making Canada "almost the sole granary of England" base their objection on climatic possibilities rather than on doubts of Canada's capacity in normal years. They speak of failures of crops, and hint at threatenings of starvation for us "even in times of peace." Perhaps this sort of talk is not exactly ingenuous. And though it may happen some day that the States and Japan will gain free entrance to Canada's corn, those contingencies are not immediate. However, our little Englanders are warming themselves with the hope that the Dominion will eventually be able to get better prices for grain in other countries than in this one. The unselfishness is so beautiful that one regrets to find it tinged with political coloring.

The physical degeneration of large masses of people in the industrial districts is a growing menace to the best interests of Old England. To an extent, failing physique involves the drink question, and some authorities are emphatic in attributing the deterioration to the misuse of alcohol. Some of the municipalities are manned by councillors holding that view. Hence comes it that in quite a number of districts posters have been procured and put upon the walls, warning residents against the evils of alcohol. These are charged to the rates, and it is, perhaps, not surprising that liquor traders should be moved to energetic protest. The posters have passed the limits of dispassionate language in some cases, and ratepayers have been presented with vehement denunciations of drink by rhetorical gentlemen, who possess no special title to scientific knowledge of their subject. Licensed dealers now enquire when vegetarian, homœopathic, socialistic and anti-vaccinationist bills will be printed and exhibited on walls at the general expense.

Exporters here have been more or less perturbed by the boycott phenomenon in the Far East. Beginning with a taboo on American goods in China, it has extended to a proscription of English goods in Bengal. Already the first-named has been found hollow, and few profess any belief in the continuity of the Hindu exertion. Nevertheless, a certain unease is natural, for these departures from sound business principles may lead to worse later on. We had thought the Orientals to be a little too Western nowadays to allow a sentimental agitation to interfere with

substantial considerations. But in India the boycott is being invested with the sanctity of religion, and dark superstition is used to influence the native mind. How pseudo-religion may obstruct material progress is instanced by a passage in a recent work on Siberia. Farmers in some districts there decline to sell milk to the creameries. Their fathers did not, nor their grandfathers either, and they are fully persuaded that "the Lord would not like it."

In bracing Canada the incentive to drink is no doubt less acutely felt than in moist, muggy England or in South Wales. Still, brewers will want to advertise, and they will need to be careful to avoid such slips as this from a Swansea brewer's circular: "Bright, sparkling beer, free from sentiment."

North Country.

Manchester, Oct. 2nd.

* * *

IN THE OLD COUNTRY

With the Canadian Manufacturers.

Whoever thinks of Sheffield thinks at once of cutlery and edge tools. Indeed it has been famous for these since Chaucer's time. And a man who has been there in former years, say 1875, carries with him visions of black smoke, of busy machinery, of a community absorbed in industrial activity. To-day, however, there is a different Sheffield; different, that is to say, in its greater attention to things that make for man's higher good. And one who has observed, long ago, the beauties of the country immediately around commercial Sheffield must have found an incongruity in the maintenance of a grimy, noisy, crowded city of workers with little or no attention paid to their surroundings outside these workshops. A town that may be said to belong geographically as much to Derby or Nottingham as it does to Yorkshire has beauties of nature all around it. The Peak District is famous, Castleton interesting, Matlock lovely as a holiday retreat. Then the noblemen's seats—Chatsworth, with its glories, Clumber and Thoresby with their beauties—Newstead Abbey, with memories of Byron; Wharncliffe, with its fable of the Dragon. Later years have made these attractions more accessible, and not only the traveller from abroad but the artisan and his wife from Sheffield now finds facilities by steam rail or tram to see them easily.

Too few of them were visible on this occasion to the pilgrims of the Canadian Manufacturers' Association, however, for our programme did not permit of our loitering in the outskirts. Our business was in Sheffield's splendid town hall to meet the Lord Mayor, in the Cutlers' Hall to lunch with the Chamber; we wanted to see the Firths and John Brown & Co., and Joseph Rodgers, and Vickers and other people who have helped to make the place famous. And see them we did, thanks to the efforts of our guides and the convenience of the tramways. Sheffield possesses real art treasures in the Mappin Art Gallery; and at Meersbrook Hall are genuine Stones of Venice collected by John Ruskin himself, who founded a museum there, and who in his abrupt way was wont to say: "This is no show place merely; this is a school." We saw too little of the public buildings, but this was the fault of nobody but that pestilent fellow, Circumstances.

What a quaint and unusual experience it was to be shown, in parties of ten at a time, through the cutlery works of Joseph Rodgers & Sons. I am puzzled to recall how many years it has been—140 I think—that the curious little cubicles, stone-floored, stone-walled, having low ceilings, fitted with venerable anvils, Lilliputian furnaces and bellows, have been in use, unaltered, by this firm. Knives, razors, scissors were at our visit being fashioned by the thousand every day in the scores of little prison-like places where each man worked alone, doing nothing else all day long but heating and hammering these blades. Passing through other departments—ivory stores and lathes, wood work-shops, silvering shops, we reached the sample rooms and sales warehouses of the firm. Here we were allowed to buy what we chose as reminders of the place, to be taken over to Canada doubtless and exhibited as "bought in Rodgers' own works in Sheffield." Indeed we were presented with souvenirs as well, as if to bid defiance to the superstition that presents of knives or scissors are unlucky because "they will cut friendship."

Something of the method of building modern cannon and making ammunition was illustrated to us at Woolwich Arsenal, on the Thames, where a hundred or more members of the Canadian Manufacturers' Association were admitted in parties of ten each, a compliment quite unusual, especially for so large a number. The automatic working of some of the cartridge machinery was wonderful, but what struck us most was the big hammer of 975 tons striking weight, which could also give a tap of five pounds, and the guns of forty feet length and twelve inches calibre, weighing fifty-four tons each, or together with the gun-carriage, ninety-four tons. At the Maxim works in Sheffield there were more industrial wonders. There we saw a barbette gun carrying an 850 pound shot, for a big ship, and walked over it, trying to imagine how it would be in time of war. A thrilling sight it was to see, at the Arsenal, a rifled cannon forty feet long plunged red-hot into a well sixty feet deep, said well containing rape oil—the object being to temper the metal. It is kept in the oil all night. The head of this great establishment, Col. Thomas Vickers, paid us the compliment of personally conducting the party about the works. "There is one of the finest metallurgical heads in all Sheffield," said Mr. Fisher to a group after introducing us. Here we saw the rolling of hot armor plates by electrically-driven rollers, and the handling of them by semi-human mechanical powers. An ingot weighing twenty-eight tons was reduced in our presence by successive rollings from 6 by 8 feet and 19 inches thick, to a thickness of 9 inches while expanded to 10 by 12 feet. An enormous amount of yard space was covered with cold ingots of steel, intended for future guns, with slowly cooling plates, and with masses of metal for other purposes. "Here are some 18-pounders we are making for Canada," said Col. Vickers, and then he showed us the gun which carries an 850-pound shot. Responding to some remarks from members of our party as to various industrial centres of the Midlands, Mr. Fisher, who had a happy way of expressing himself, and was by no means beyond a joke, declared that "Birmingham is the toy-shop of the world; but this (Sheffield) is the workshop of the world."

Observing, as we had occasion repeatedly to do, the seals and mottos of the various English towns which entertained us, a member of the party with a taste for the classics was struck with the frequent attribution in them of hard work as a good thing to conjure with. For example, the motto of the Bradford Chamber is *Labor omnia vincit,*—labor overcomes all things. Of Sheffield, *Deo adjuvante labor proficit,*—God assisting, hard work will prevail. And the sturdy motto of another English industrial centre is, we were told: The Lord helps those who help themselves.

A military band played us to our temporary resting-place (after some strenuous visiting) in the Memorial Hall, Lister Park, at Bradford, the town corporation and the Chamber of Commerce uniting in a sumptuous luncheon. "The Visitors," and "Our Kinsfolk beyond the Seas" were toasts proposed by the Mayor, (Ald. Priestley), and the president of the Chamber (Mr. W. H. Mitchell), respectively. The menu cards and toast list bore the Canadian arms and the seal of the town embossed in colors.

At Leeds, which we reached on 29th June, the luncheon given us by the Chamber of Commerce was served in rooms of old-fashioned appearance with a certain crowded cosiness. And the menu contained, among many substantial viands, Yorkshire ham and gooseberry fool, two dishes which we were later to grow increasingly fond of as the trip went on. Lord Mayor Armytage made us a warm speech of welcome. From his speech some took him for a foreigner, but he is of Leeds origin. He is chairman of the directorate of the well-known Farnley Iron Works.

By order of the Board,

H. S. STRATHY,
General Manager.

The Traders Bank of Canada
Toronto, 13th October, 1905

BERLIN'S EXHIBITION.

It was an interesting exhibition which was held this week in Berlin, Ont. That enterprising town, not content with the very good slogan, "Made in Canada," thought it would astonish the Dominion by an even greater concentration of energy, and so its exposition of goods "Made in Berlin" is the result. Not only were the people of the town itself educated to an understanding of the marked progress being made by its own varied manufacturing industries by this event, but the outside public was attracted as well to attend in large numbers. When Hon. Mr. Whitney, the Premier of Ontario, opened the fair on Monday last, attended by two of his Ministers, Hon. Mr. Foy and Hon. Dr. Pyne, there were no less than seventy different representations of home-made manufactures in evidence, and Berlin may well be proud of its enterprise and energy. It would make too long a list to go into details as to all the articles exhibited, but the following is a summary: Sole leather, slippers, boots and shoes, knitted stockings, hair felt, shirts, collars, cuffs, furniture of all kinds, clocks, music cabinets, bank, hotel and office furnishings, church furnishings, store fixtures, silent salesmen, ladies' shirtwaists, granulated sugar, rubbers and rubber boots and shoes, buttons of horn, pearl and rubber, leather, boots, shoes, slippers, leggings, hot-air and hot-water furnaces, tanning machinery, pipe-cutting machinery, threading machinery, woodworking machinery, castings, gasoline engines, water boilers and motors, engines, pumps, suspenders, trunks, valises, packing boxes, leather embossed goods, paper boxes, biscuits and confectionery, robes, gauntlets, clothing, automobiles, bicycles, mattresses, caperines, caps, mitts, shoe blacking and polish, building supplies, pianos, ladders, washing machines, flour, brick, concrete tiles, lager beer, refrigerators, cigars, overalls, brooms, gas generators, aluminum goods, etc.

* * *

HOME LIFE ASSOCIATION.

We learned, too late for announcement in our issue of last week, of the transaction by which the Home Life Association of Canada takes over the insurance contracts of the People's Life. These amount to something like $2,500,000 (at the end of December, 1903, they were $2,312,557). This addition will swell the aggregate risks of the Home Life to between $6,000,000 and $7,000,000. The transaction removes from competition one of the weaker Canadian companies, and puts its policyholders into the hands of a better-known and better-conducted concern. It will also result in a reduction of expense. The board of the Home Life will be composed, we understand, of gentlemen who have been on the boards of both companies. Of the fifteen whose names have appeared in the daily press as probable directors, seven were on the former board of the Home, namely, Messrs. J. S. King and J. C. Curry, K.C., of Toronto; George E. Amyot, of Quebec; G. W. Boddy, of Portage la Prairie; J. F. Tufts, Wolfville, N.S.; J. F. Hough, Winnipeg; J. H. Spencer, Medicine Hat. When we learn who compose the new board of the Home Life we shall give them to our readers.

* * *

BANKING AND FINANCIAL ITEMS.

The Royal Bank of Canada has opened a north end branch in St. John, N.B.

The Bank of Hamilton has added Bradwardine and Kenton, Man., to its list of branches.

The Union Bank of Canada has recently opened branches at Fenwick and Fonthill, Ont.

The Union Bank of Canada opened a branch at Fort William, Ont., on the 2nd inst., under the management of Mr. C. R. Dunsford. The same bank has just opened a branch at Plantagenet, Ont.

We observe it announced in the "Canada Gazette" that application is to be made for a charter for the United Empire Bank of Canada, with head office in Toronto, and a capital of $5,000,000. The applicants are a firm of Toronto solicitors, and we are told that the manager is to be a well-known and capable banker.

On the closing day of the convention of the American Bankers' Association, Friday, 13th October, the following officers were elected: President, John L. Hamilton, Hoopeston, Ill.; first vice-president, G. S. Wilson, vice-president of the National City Bank of New York. L. A. Pierson, of the National Exchange Bank of New York was added to the Executive Council. Mr. Hamilton, the new president, is described as a middle-aged man who has shown striking ability as a banker, but who has refused many tempting offers to larger fields.

The American Bankers' Association has what is known as a protective branch, whose watchfulness is intended to save them from the depredations of thieves, burglars and forgers. It is a resolve of the association that every forger or robber shall be pursued until he is caught. Every member of the 7,670 members of this powerful body will if necessary assist in catching and convicting such criminals. That the protective branch does really protect will appear when we say that only seventeen of the associated banks lost $10,147 in all in the last twelve months in this way; while $87,074 was lost by seventy-five United States banks, non-members, through forgery and burglary or other robbery.

There is a proposal to amalgamate two mortgage loan companies of London, Ont., the Huron and Erie and the Canadian Loan and Savings Companies. All that is necessary to complete amalgamation is the sanction of the shareholders of the latter company. If the amalgamation should take place, the company will probably bear the name of the Huron and Erie. The subscribed capital of the two companies now amounts to $3,750,000, of which $2,150,000 is paid up, and their reserve funds total $1,315,000. The capital of the Canadian is $750,000, all paid up, with a reserve of $315,000 and deposits and debentures of $1,330,876. The Huron and Erie has a subscribed capital of $3,000,000, with $1,400,000 paid up and a reserve of $1,000,000. The deposits of the latter company were $1,659,163 at the end of 1904, and its debentures amounted to $4,088,058 at the same date.

Our Montreal advices tell anew of a proposed "Farmers Bank of Canada," offices of the provisional directors of which were in the Leeming-Miles Building, corner of Notre Dame Street and St. Lambert Hill, in that city, bearing signs printed in both French and English. A charter for a bank of this name was obtained at Ottawa in 1903, and it was supposed from the names of the applicants that the head offices were to be in Toronto, but the promoters decided to make a change, thinking that a better opening for business presented itself in Montreal. And so efforts were made to interest Montreal capitalists and business men in the enterprise, supposing money to be plentiful there. But Mr. Durand, whoever he may be, has been trying since midsummer to get the necessary capital subscribed, and, with that, a satisfactory board of directors. But he does not appear to have succeeded, and enquiries at the "provisional offices" for Mr. Durand or representatives of the new banking proposition fail to elicit any information other than that Mr. Durand has left the city and given up the enterprise. It is not a light task to found a new bank, though some promoters think that the gift o' the gab or a liberal use of printers' ink may do the trick.

* * *

—Word came by cable on Saturday that the strike of the electrical workers in Berlin, Germany, is ended. At a conference on that day the delegates of the workingmen voted to accept the associated companies' original offer of 5 per cent. increase in wages. The result is a complete victory for the employers, who, with the dignified deliberation that Germans can show when they combine for protection against unreasonable demands, made their arrangements to fight the strikers until they should come to terms.

Mercantile Summary

Some fine new shoots of ore are reported to have been discovered in the 500 and 600 foot levels in the Ymir mine at Nelson, B.C.

A house to house census has been taken of Waterloo, Que. The total population is found to be 1,918, of which 784 are Protestants and 1,134 Roman Catholics.

The assessors' returns on London, Ont., property, which were fixed at $20,141,454 for the present year, show a valuation of $21,713,034 for 1906, a gain of $1,571,580.

The Canada Brass Manufacturing Company's factory in London, Ont., was badly damaged by fire on the 15th inst. at a loss of $20,000 to $30,000, covered by insurance.

The man who can discount his neighbor on quality at the same cost has hit the secret of success in business. "Just a little better" is a good motto. When you can say that of your work you will be able to go right along leaving your competitor to take his own way.

The Mathews Steamship Company, Limited, Toronto, has an Ontario charter authorizing it to build, lease and operate vessels, and make machinery necessary for their construction or equipment, and to transport goods and merchandise. The share capital is placed at $250,000. Alfred E. Mathews and R. L. D. Taylor, of Toronto, are among the provisional directors.

An awkward situation has developed in Galt, Ont. The sum of $35,000 has already been spent on the Collegiate Institute in that place, but it requires $30,000 more to furnish the building. A by-law was submitted to the ratepayers on Saturday last, but it was defeated and the building now remains in an unfinished state, with no funds available with which to complete it.

We learn from the Gazette that the retail merchants of the Eastern Townships have formed an association, which is to be incorporated. Mr. L. A. Bayley, of Sherbrooke, has been elected president; Mr. L. V. Marchessault, of West Shefford, 1st vice-president; Mr. J. A. Wigget, of Sherbrooke, 2nd vice-president; Mr. A. J. Hudon, of Richmond, treasurer, and Mr. J. J. Mullin, of Bedford, secretary.

The output of the Atlin mining district of British Columbia this season is expected to reach the sum of $100,000 more than last year, due it is believed to the large amount of "drifting" that was done last winter. The large dredges that have been put on in this district during last season seem to be meeting with success. The Northern Mines, Limited, have installed a steam shovel plant on their property on Spruce Creek, and it is said to be proving itself already to be a thorough success. The British American Dredging Company have had a good season's operations on Gold Run Creek.

DOMINION SECURITIES
CORPORATION LIMITED
26 KING ST. EAST TORONTO.

Mercantile Summary.

A plant for the reduction of dog-fish into fertilizer and oil has been established at Shippigan, N.B. It is now running with enough of these pests of our coast on hand to keep it going full time.

We are told that B. Schaffer, in the clothing line at Montreal, is offering 40 cents on the dollar on liabilities of about $7,000. At one time he was in business at Magog, Que., and was reported as having failed there in 1900.

Consent to assign has been fyled by Simon Butler and Abraham Goldstein, who have been doing an installment house-furnishing business in Montreal, under the style of the Imperial Credit Co. They began operations last spring, and have not had time to accumulate very heavy obligations.

The Coleman Development Company, Limited, head office Haileybury, Ont., capital stock $300,000, has received an Ontario charter. J. F. Gillies, of Haileybury, and John McKay, of Sault Ste. Marie, are provisional directors. It intends to carry on a mining, milling, reducing and developing business.

An assignment has been made to J. A. Chisholm by Russell & McLaughlin, general merchants of Martintown, Ont. Russell had been previously in the tailoring business for some fifteen years, and had only recently gone into a general store and baking business, taking McLaughlin into partnership in the autumn of 1904.

The Canadian Ticket Agents' Association held their annual convention in Portland, Me., on Monday last, and elected officers as follows: President, W. Buntin, Grand Trunk Railway, Peterboro'; vice-presidents, W. R. McIlroy, Canadian Pacific Railway, Peterboro'; C. R. Coleman, Canadian Pacific Railway, Truro, N.S.; R. J. Craig, Canadian Pacific Railway, Cobourg; secretary-treasurer, E. De La Hooke, Grand Trunk Railway, London, Ont.

Reports from surveyors show that Chesterfield Inlet and Baker Lake, on the Hudson's Bay, are navigable for fair-sized steamers, about 100 miles inland. It is said to be the intention of the comptroller of the North-West police to try and make use of this stretch of navigable water to establish connection between Fullerton and Edmonton by way of Chesterfield Inlet, Baker Lake, Great Slave Lake and Athabasca River.

The Penitentiary Prison Mirror, a little paper published in a Minnesota prison, remarks pertinently as follows: "Why is it that from the first inception of our paper to the present time we have not had an editor to sojourn in our midst? Other professions have been well represented. Of preachers we have had enough to furnish substance to an African chief for a year; of doctors enough to depopulate a state; and lawyers enough to establish a good sized colony in hades. But editors, not one."

A Change in the Trusteeship.

Whether of a Will, Marriage Settlement or Bond Issue, is a troublesome and expensive matter.

Where private trustees are appointed such changes are inevitable.

The Trusts Company alone enjoys continuity of tenure, fixity of residence and permanent records.

ADMINISTRATOR

An administrator is appointed by the courts to manage the estate of one who dies without leaving any will. In such cases it is important that there be a faithful and economical management of the estate until its final disposition according to law. A Trust Company offers such management, and its charges never exceed and are often lower than those allowed a private individual for such services.

Mercantile Summary.

The Monarch Wood Extraction Company, Victoria, B.C., has erected a plant for the extraction of turpentine and other products from native green fir.

Sixteen new ice boats, it is said, are being built for use on Northumberland Strait, between Cape Tormentine and Traverse, the old boats being unfit for use. An addition is being built to the Government boat house at Cape Tormentine.

The British Columbia Electric Railway Company, which has in force a unique profit-sharing system, has just distributed among its employees the sum of $17,000, equal to $40 to each employee. The system is said to work admirably.

We note that a consignment of Australian turpentine wood has just been received in Vancouver. It is intended for use on wharves in British Columbia, the Dominion Government having ordered several lots with a view to testing its rot-resisting qualities.

Application is being made to the Three Rivers city council for permission to run gas pipes in the streets to supply natural gas from St. Barnabe, 18 miles distant. The Three Rivers Gas, Heat & Power Company now furnishes gas for lighting and heating.

A. Gowan and C. L. Twohey, of Duluth, and other Minnesota capitalists are said to have obtained an option on the saw-mill and timber limits of the Arrowhead Lumber Company at Arrowhead, B.C., the price involved being about $650,000. There is stated to be about a billion feet of lumber on the property, mostly cedar.

The Grand River Metal Works, of Galt, Limited, and the Canada Steel Goods Company, Limited, are being amalgamated under the name of the Canada Steel Goods Company, Limited, with a share capital of $115,000, and head offices in Hamilton. It will make engines and deal in other articles of metal. A. F. Hatch, of Toronto, and J. S. and R. O. Y. Amslie, of Comber, Ont., are the provisional directors.

The Kildare Mining Company, Limited, Ottawa, capital stock $100,000, has been granted a charter from the Dominion Government authorizing it to purchase and deal in mines, and construct roads, bridges, reservoirs, etc. W. W. G. Bronson and Hon. Nap. A. Belcourt, of Ottawa, are interested in the company.

The Dominion Packing Company, in liquidation, is to pay its creditors 2.71 cents on the dollar. In the final statement of its affairs the assets available for distribution are given as $5,125 and the liabilities as $188,932. The concern was started to get a provincial subsidy. The Prince Edward Island Government refused to make the payments, however. It saved the public money if not the public's.—Montreal Gazette.

Mercantile Summary.

For the past twelve years E. Duffy, of Morrisburg, Ont., has carried on a small and declining store business, and he is now reported as offering 30 cents, on liabilities of $1,300 or thereabout.

It appears that the Bank fishing fleet of Lunenburg, Nova Scotia, has done well this season. The "Aguadilla" made a catch of 2,100 quintals during the season, and the "Junita" a like catch. These two schooners are the leaders and have made a profitable year's work.

The property at the southwest corner of Victoria Square and Craig Street in Montreal has been sold, it is said, to Mark Fisher & Co., the purchase price being estimated at $95,000. The property has a Craig Street frontage of 32 feet with 77 feet front on the Square.

The liquidators' statement in the matter of the Dominion Packing Company, of Prince Edward Island, shows receipts of $10,264, expenditure $2,639 less preferred, liens $2,500, balance for distribution $5,125; net liabilities $188,933; final dividend 2.71 cents on the dollar.

The Municipal Trenching Company, Limited, Montreal, whose object is to undertake the work of excavating, dredging and removing rock, earth, etc., to make all kinds of machinery connected therewith, has received a Dominion charter. Its capital stock is placed at $1,000,000. J. W. Harris, of Montreal, and F. C. Austin, of Chicago, Ill., are connected with the new concern.

Among recent purchases from the Robb Engineering Company, Limited, Amherst, N.S., may be mentioned the following: The Canadian Northern Coal & Ore Dock Co., Port Arthur, Ont., one 300 horse-power Robb-Armstrong tandem engine; J. R. Booth, Ottawa, for his new paper mills, two 400 horse-power Robb-Armstrong Corliss engines, one 350 horse-power Robb-Armstrong Corliss engine, and three 100 horse-power; the town of Napanee, Ont., two 200 horse-power Robb-Armstrong Corliss engines, two 150 horse-power return tubular boilers, and one 200 horse-power feed water heater, to be used in their new municipal lighting plant; the town of Westmount (Montreal) two 350 horse-power Robb-Armstrong vertical engines for their new municipal lighting plant.

Country failures in Quebec Province are noted as follows: J. P. Guay, a general dealer of St. Elzear, is making offer of 30 per cent. cash, on liabilities of about $9,000. He suffered from fire loss several weeks ago, and it is understood his father holds part of the insurance, as security, it is presumed, for advances made.——R. A. Weilbrenner, formerly a dry goods clerk in Quebec City, and in business for himself in a small way since 1901, at Portneuf, has been obliged to assign. He is said to owe about $1,800.——Alberic Frechette, a tinsmith of Daveluyville, has assigned, and H. Desautels, in the same line of business at St. Hyacinthe, is reported as offering his creditors 25 per cent. of their claims.——H. Potvin has long been engaged as a general merchant at Ste. Louise, but not very successfully. Only a few years ago he was reported in trouble, and now his affairs are in the hands of the assignee, who has instructions to close out the estate.——S. Simard & Frere, carrying on a small grocery and hotel business at Normandin, on the north shore of the St. Lawrence, below Quebec, have assigned, with small liabilities, mostly due in Quebec.

The peddler is making himself known in our prairie West. "Successful Agriculture" in its September issue comes down hard on the tea merchant on wheels; the book vendor; perfume, soap, and novelty merchant, who visit farms with pack on back or driving a trap. And they are the worse hated it seems, because supposed to come from the East! We quote a paragraph from this paper, published in Brandon, which calls Ontario "another country": "It will surprise our readers when we state that we know a family of peddlers that sell tea throughout the West. They live in the winter in a palatial residence in Ontario. Their wives were in Brandon this summer dressed in silks; yet they tell the farmer that their goods are cheaper, better, etc., etc. Farmers, why do you swallow this smooth talk? Why do you give your money to building up some fossil town or village in Ontario? Haven't you staked your future with the West and on the West? Yes. Then be loyal to the West and the people in the West. Down with this "parasite peddler." He may apparently be a nice fellow and his goods may look good, but that shouldn't matter. It's the fact that he is from another country. Turn him down cold next time."

LAKE FREIGHTS.

Speaking of the freight situation on the Great Lakes, the "Marine Review" of Cleveland says, that were it not for the fact that the ore movement is so thoroughly covered by contract, it is likely that the wild rate would advance under the stimulus given to the market by the great demand for grain tonnage. As usual the Steel Corporation is the dominant factor. A couple of weeks ago it was inclined to be lenient with its contract tonnage, but now it insists upon the delivery of ore under contract. Certain vessels that have sought the grain trade have been withdrawn to care for ore. The result is that grain shippers are looking for tonnage, and as usual, when there is greater demand than supply, the grain rate has been continually advancing. Indications point to an extremely heavy grain movement at attractive figures to vessel owners, and as stated, were it not for the grip that contract tonnage has on the ore trade, the wild ore rate would surely advance. Ore figures for September were 4,287,387 tons, showing a slight gain over the figures of the same month last year which were 4,006,442 tons. If the ore movement for October and November equals that of last year, the total movement for this year will reach 33,000,000 tons. There is ample tonnage to care for this movement, of course, but it is doubtful if Lake Erie docks are in shape for it. Despatch has been very poor lately, certain vessels being in port over a week waiting to be unloaded. This condition has been brought about by the diversion of cars by railways to other trades with the result that there is great scarcity of ore cars. Improvement in this particular is much desired, but there is little expectation of it.

⁂

PRACTICAL PREACHING.

Toronto appears to have made a desirable acquisition in Rev. Dr. Kilpatrick of Knox College. He comes from Manitoba to occupy the chair of systematic theology, and at his induction he gave an address in which he handled the question of the proper education for a Canadian minister, in a powerful manner, though with a plentiful leavening of humor.

We quote from the World's report: "The sociological problems of the day were obscuring even the scientific, he believed. Questions of wages, labor and land occupied the mind more than anything else. It was needful that the minister acquaint himself with these matters that his preaching might be effective. No church could afford to let men in who couldn't preach, and no college was doing its duty if it believed that the production of preachers was the merest part of its work. The minister should be a citizen, but never a political partisan. He should be well versed in the constitutional law of Canada, and have knowledge of economic laws and forces. It was essential that he be of no class or caste, and be able to sit with equal ease at the rich or the poor man's table.

"He should learn what the millennial dawn is, also what Dowieism means, and be informed on the black iniquities of Mormonism"—thus the speaker humorously rounded out his estimate of what the divinity student should master.

Debenture for Sale

Tenders for the purchase of a $44,000 thirty-year Debenture, bearing 5% Interest, of the Edmonton Protestant Public School District No. 7 will be received by the undersigned up to the 14th Nov. at 4 p. m.

Edmonton Protestant Public School
District No. 7.
ST. GEO. JELLETT.
Secretary-Treasurer.

Tenders for Debentures

Tenders, sealed and endorsed "Tenders for Debentures," will be received until Monday, the 30th day of October, 1905, at 4 p. m., for the purchase, in whole or in part, of ten-year $500 Local Improvement Debentures of the Corporation of the City of Victoria, amounting in all, approximately to the sum of $46,747.00, and guaranteed by the Municipality as a whole.

The debentures bear interest at the rate of 4 per cent. per annum, payable half yearly, the principal and interest being payable at the office of the Bank of British North America, either in Victoria, B. C.; Montreal, London, England, or New York, U. S. A.

The tenderer must state the price net at Victoria which he will pay. In addition to the net price the purchaser will have to pay to the Corporation the interest on the said debentures for the period between the dates of the debentures and the date of the receipt of the purchase money by the City Treasurer. The Corporation does not bind itself to accept any tender.

WELLINGTON J. DOWLER,
C. M. C.

City Clerk's Office, Victoria, B. C., October 7, 1905.

Vancouver Debentures

Tenders marked "Tenders for Debentures" will be received by the undersigned up to Friday, 24th November, 1905, at 4 p.m., for the purchase of $500,000.00 Debentures of the City of Vancouver. These debentures will bear interest at 4 per cent. per annum, payable half yearly. Principal repayable as follows:—

As to $46,500 at the expiration of 12 years
" $25,000 " " 15 "
" $157,500 " " 20 "
" $17,500 " " 30 "
" $253,500 " " 40 "

The highest or any tender not necessarily accepted.

Tenders will be received for the whole or any part of the different issues.

For further particulars address,

A. McEVOY, City Clerk,
Vancouver, B.C.
Vancouver, B.C., 6th Oct., 1905.

WESTERN UNION TELEGRAPH.

Last week appeared the report for the year ended with June last of the Western Union Telegraph Company of the United States. There was an increase of revenue from ordinary commercial messages, but the discontinuance of racing reports counter-balanced this and caused a decrease of $215,755 in the gross earnings. The gross earnings for the year were $29,033,635, or nearly $100,000 per day, a decrease of $215,755, and net earnings were $7,188,065, a decrease of $699,410. After payment of interest and dividends, the surplus for the year amounted to $1,092,781, a decrease of $768,923, as compared with 1904. At the meeting of stockholders Harris C. Fahnestock and Thomas H. Hubbard were elected directors, to succeed A. R. Brewer, resigned, and Charles Lockhart, deceased. The other directors were re-elected. Col. R. C. Clowry is the president.

The following interesting particulars we obtain from the report for 1904-5 of the same company: During the year of the United States. During the year 67,477,320 messages were sent over the company's wires, against 5,879,282 sent thirty-eight years ago. The average cost per message to the company was 27.3 cents and the average toll was 31.6 cents. In poles and cables 874 miles and in wires 29,152 miles were added to the plant. There were 356 new offices established. Of the total of 1,184,557 miles of wire on June 30, 306,736 were of copper. The cost of new construction was $1,288,279 less than in the previous year.

THE BASIS OF FRENCH WEALTH.

The vast wealth of France is divided into a vast number of small savings, says Le Rentier. In France there are not 20,000 persons who are millionaires—and it must be remembered that by millionaires is meant a possessor of 1,000,000 francs, or, in other words, $193,000. There are possibly ten persons in the country whose fortunes are 100,000,000 francs, or about $19,000,000 or over.

All the holders of great fortunes may easily be mentioned by name; only about 100 persons are worth between $2,000,000 and $10,000,000, and 14,000 have accumulated or inherited property valued at from $193,000 to $386,000. That is, France has very few rich citizens.

This distribution of wealth in France is indicated by the facts that in 1902 there was left by persons dying property of the value of $921,000,000, but of the 363,612 inheritances distributed in that year more than 300,000 consisted of sums ranging from 20 cents to $1,930. About two-thirds of the property to be distributed was in sums of $200 to $400. The large inheritances, from $50,000 to $100,000, represented only .04 per cent. of the total amount, and the property to be divided amounting to more than $100,000 represented less than .01 per cent. of the total value.

Throughout the field of French industry, in the shop, the factory and on the farm, the man of small means in the aggregate is the moving impulse in French enterprises. France occupies only one-eighteenth of the surface of Europe. In 1892 the French farms of less than ten hectares numbered 4,852,963; the farms of more than ten hectares numbered only 849,789.

Of the landowners 2,235,405 were cultivating less than one hectare apiece, 1,829,259 tillers of the soil were cultivating from one to five hectares apiece.

This means very intensive cultivation, like that in China. The dependence of a family upon so small a plot means the production of all the fruit and vegetables that can be coaxed out of the soil. It is only on the larger holdings, many of them still very small, that wheat-raising is prominent, yet France, next to Russia, is the largest wheat producer in Europe.

It is the vast army of small savers in France, the 9,000,000 persons whose names figure in the tax accounts and who own the millions of small parcels of personal property and real estate that make the fortune of the country. In comparison with their aggregate accumulations the possessions of the wealthy are insignificant. Such facts as these illustrate in a striking manner the thrift of the masses of the French people.

* * *

—We understand the Dominion Government has given a charter for the erection of new barracks in Toronto to Messrs. Sullivan and Langdon, of Kingston. The price is about $225,000.

* * *

—"So you enjoy seeing your son play foot-ball?" "Yes," answered Farmer Corntassel. "If he ever gets into the habit of workin' that hard, mebbe we'll make the farm pay yet."—Washington Star.

MOLSONS BANK.

The fiftieth annual general meeting of The Molsons Bank was held in the board room of that institution in Montreal at 3 o'clock Monday afternoon, 16th October.

The president, Mr. Wm. Molson Macpherson, occupied the chair, and others present were: Messrs. S. H. Ewing, vice-president; J. P. Cleghorn, Lt.-Col. Fred. C. Henshaw, H. Markland Molson, W. C. McIntyre, W. M. Ramsay, George Durnford, R. W. Shepherd, E. H. Copland, Edward Fiske (Joliette), A. G. Watson, George Smith, Alfred Piddington, S. W. Ewing, George Filer, James Skeoch, E. K. Greene, F. W. Molson, and W. R. Miller.

The president, having called the meeting to order, requested Mr. A. D. Durnford to act as secretary, and that gentleman read the advertisement convening the meeting.

The general manager, Mr. James Elliot, then read the annual report of the directors, as follows:

Gentlemen.—The directors have pleasure in submitting this, their fiftieth annual report and statement, showing position of the bank on 30th September, 1905.

The net profits for the year, after making provision for bad and doubtful debts, amount to $399,274.51.

Two dividends have been paid the shareholders, making 10 per cent. for the year. The usual contribution made to bank pension fund; $55,483.90 has been written off bank buildings, and a bonus paid to the officers.

The balance left at profit and loss account is $31,417.93.

Your directors have thought it advisable to add considerably to the bank's holdings of real estate for use of its branches, at Montreal, Toronto, Winnipeg, Exeter and other places, making in all a large addition to its assets and quite justifying the increase you will observe of $100,000 to the bank premises account, which now stands at $400,000.

Branches have been opened during the year at Amherstburg, Ontario, and at St. Therese, Quebec, and a sub-agency at St. Thomas, Ontario, and a branch will be opened at St. Henri so soon as our handsome building, now being erected on Notre Dame Street, is ready for occupation.

All branches have been carefully inspected as usual during the year, and your directors record with pleasure their satisfaction at the zeal and care displayed by the officers in the discharge of their duties.

WM. MOLSON MACPHERSON,
President.

General Statement of the Affairs of the Molsons Bank.

30th September, 1905.

The President's Address.

The President then said:

Gentlemen,—You have heard read a statement for the year, which, I am sure, is gratifying. It establishes the bank now as on, what you might say, a new footing, paying 10 per cent. dividend. Further, I have no doubt the bonus to the officers is equally gratifying.

It affords your directors great pleasure to place before you this report, the result of another satisfactory year. You will observe by our statement that the bank is in a strong position. Reserves of cash and quick assets are ample. Deposits are increasing steadily, and our business shows a satisfactory growth.

This is the fiftieth year of the bank's existence. It is interesting to note some of the great changes that have taken place in this interval.

In 1855 Canada's population was 2,650,000; now it is nearing 6,000,000. In 1855 there were 19 banks, with but a small number of branches; now there are 36 banks, with about 1,150 branches. The capital of the banks was then $15,000,000; it is now $86,000,000.

Deposits were $11,000,000; now deposits in banks; government savings banks and loaning companies, amount to about $650,000,000.

In 1855 the capital of the Molsons Bank paid up was $308,375; to-day it has a paid up capital of $3,000,000, and a $3,000,000 reserve. It has never omitted paying a dividend, and for the whole period of fifty years dividends averaging 8 per cent. per annum have been paid.

It is gratifying to feel that the Molsons Bank has steadily progressed with the country, doing its share in providing additional capital where required, and establishing branches where business warranted it; these now number 48, the first of which was opened in London, Ontario, in 1870.

It is pleasing to be here to-day, some of us descendants of the founders of the bank, whose records speak for their great business capacity and energy. We endeavor that the bank shall continue in the careful and prudent policy laid down by the fathers of the institution, and carried on under the able management of the late general manager, Mr. F. Wolferstan Thomas, and that the future may contribute the same satisfactory returns as in the past.

The outlook seems promising; the great prosperity of our western country, the extension of the three great railways now required to bring our products to markets, the increasing tide of immigration, mainly of a satisfactory class, reasonably assure us, under Providence, years ahead of continued prosperity.

Let me here read the opinion of United States authority, Mr. B. W. Snow:

"In all my experience, I do not know of any other country or land on the face of the globe of the same extent containing as large a percentage of high class wheat land, as lies between Winnipeg and the Rockies. This is a big statement, but it is absolutely true and correct. I have watched the development of this new country for some years past, and I believe it is a matter of a very few years until what we in the Northern States call Northwestern Canada will produce a larger surplus of wheat for the world's market than is now produced in any other country."

Such development brings prosperity to the whole of Canada, and we hope to share therein.

Your directors have great pleasure in placing before you such a statement as we have to-day. We have repeatedly been approached, as possibly a progressive bank, and asked if we would not make the dividend a quarterly one. For some time we deemed it unwise to entertain the idea; but, now we have our reserves equal to the capital, and are doing everything we can for the advantage of the shareholders, we would suggest to the meeting to-day, if it is your pleasure, that we are willing to undertake to pay a quarterly dividend. It is very gratifying to feel ourselves in a position to do so.

In reference to the founders and builders of the bank, I desire to mention Mr. James Elliot, our general manager, who enjoys the distinction of having entered the bank as a junior under its first president, Mr. William Molson, and through assiduous hard work and good judgment, attained the position which he now occupies. We appreciate his untiring devotion, and look forward to his guidance and assistance for years to come.

The whole staff of the bank have cause to-day to feel proud of the result of their work in connection with the bank. The directors desire to express to them their appreciation of their services, and are pleased to be able to show this in a tangible way, by the bonus which has been given.

I beg to move the adoption of the annual report.

This was seconded by Mr. S. H. Ewing, vice-president.

The president having invited discussion on the report, Mr. A. G. Watson remarked that he had no questions to ask, but as a shareholder he was perfectly satisfied with the statement which had been laid before the meeting. He heartily approved of the bonus to the officers, and was very willing, as a shareholder, to pay his quota, for they were entitled to it.

The motion for the adoption of the report was then unanimously carried and the president named Messrs. George Durnford and R. W. Shepherd to act as scrutineers for the election of directors.

The president: We shall be very pleased to hear any remarks any shareholder has to make in reference to the business of the bank. It has held a very prominent position, and is among the oldest banks in Canada. On an anniversary like this there might be some remarks the shareholders would like to make.

Mr. E. H. Copland—I think we are all pleased to hear about the quarterly dividend. Other banks are going ahead in this direction, and, like the bonus to the clerks, it is one of the things we have got to keep ahead with. There is nothing so scarce in the market to-day as good help. We have got it, and I think we should show we appreciate it, just in the shape of a bonus.

Thanks Are Tendered.

Mr. R. H. Shepherd then moved: That the thanks of the shareholders are due and are hereby tendered to the president, vice-president and directors for their efficient service during the past year.

This was seconded by Mr. Edward Fiske, and unanimously concurred in.

The vice-president acknowledged the compliment, saying: I thank you very much, on behalf of myself and my fellow directors, for the motion just carried; it is very kind of you to do so. Being here to-day I must say that I feel proud of being connected with an institution of this sort. I opened an account with this bank when it was one year old, and my name has been steadily in the bank ever since, which, I think cannot be said by many doing business in any other bank in this country. I say I am proud to

SCOTT & WALMSLEY,
ESTABLISHED 1858.
Managers and Underwriters.

belong to this institution. I have been with it in its dark days, when there was not only trouble in this bank, but in many throughout the country. We fought it out, and always kept up our dividends, and the bank to-day occupies a highly honorable position all over this Dominion.

We also have reason to be proud of our help; from the general manager down, they have all done their duty. We have not had a serious complaint since we met here last time of any hand employed either in this bank or in any of our numerous branches.

At the present time, we are putting up a very beautiful building on St. Catherine Street, which we expect to be ready for occupancy by April next. Again, at St. Henri, we are putting up a very fine building, which we expect will be ready in a very short time, and which, I believe, will be a profitable branch of this bank.

I again thank you for the kind vote of thanks you just passed.

Mr. H. Markland Molson proposed a vote of thanks to the general manager and the whole staff of the bank for the efficient manner in which they had conducted the affairs of the bank during the year, at the same time referring to the bonus, and saying he knew how hard they had worked for it.

This was seconded by the president, and the motion was unanimously concurred in.

The general manager replied, saying: For myself and the other officers and

61 to 65 Adelaide Street East, TORONTO.

members of the staff, I thank you for the kind way in which you have spoken of us. The staff is a loyal one, and there has been no trouble for years with any of its members, in the way of embezzlement or anything of that sort. At present there is such a demand for good officers by many banks that are increasing the number of their branches, and so on, that temptations are held out, but only a very few have left us, which shows that the staff is satisfied with the institution.

The meeting then proceeded to the election of directors, the president suggesting that, if agreeable, one ballot be cast.

This was unanimously agreed to.

The scrutineers then reported the reelection of the retiring board of directors, viz.: Messrs. J. P. Cleghorn, S. H. Ewing, Lieut-Colonel Fred. C. Henshaw, H. Markland Molson, Wm. Molson Macpherson, Wm. C. McIntyre, and W. M. Ramsay.

The president thanked the shareholders for their attendance, and observed that it could only be hoped that a continuance of prosperity might remain with the Molsons Bank.

At a subsequent meeting of the directors, Mr. Wm. Molson Macpherson was re-elected president and Mr. S. H. Ewing vice-president for the ensuing year.

WHO HOLDS THE CONTROL ?

In all Stock Companies the stockholders retain the full control, even where policyholders have been allowed "a voice" in the direction of affairs; but in a purely Mutual Company such as

The Mutual Life Assurance Co. OF CANADA.

the Policyholders alone elect the Board of Directors, who appoint all the Officers and, therefore, Mutual Policyholders, through the Board, control and perpetuate the efficient management of its affairs.

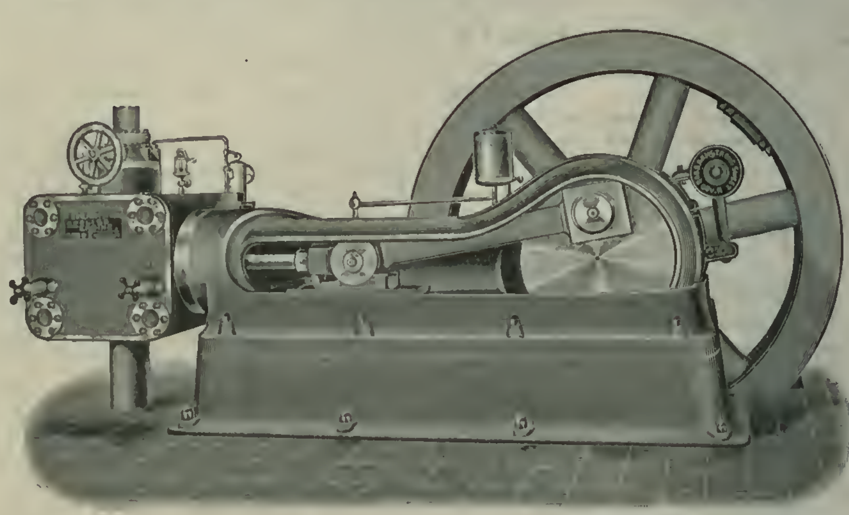
"Continuity of Management" is desirable only when exercised in the best interests of policyholders.

SWEET CAPORAL

CIGARETTES
STANDARD OF THE WORLD
SOLD BY ALL LEADING WHOLESALE HOUSES.

George W. White's planing mill and sash and door factory at Parry Sound, Ont., were destroyed by fire last Tuesday. The loss is about $6,000, with insurance of $3,000.

A FINE STEAM PLANT.



"I will say without qualification that it is as fine a boiler and engine plant as I have ever had the pleasure of seeing for its size. The engine was working without heating, and absolutely without any noise. I wish to congratulate you on your success in building this class of engine, and hope that we may have pleasure in dealing with you again."

The above refers to a 350 horse power Robb-Armstrong Corliss engine and two 175 horse power Robb-Mumford boilers installed by us.

THE PEACE RIVER COUNTRY.

Some little time ago Mr. James M. Macoun, Assistant Naturalist of the Geological Survey branch of the Department of the Interior, created something of a furore by a report on the conditions and possibilities of the Peace River country. The report was so pessimistic as to the agricultural prospects for that "great lone land," and was at the same time so totally at variance with the published opinions of such eminent authorities as the late Dr. Dawson, Dr. Macoun, (his own father), and others, that it was at once recognized that something was radically wrong. Naturally the people of Edmonton and other places comparatively near to the debated section were indignant at what they considered pure calumny, and they called loudly for some sort of a rectification of the error.

This to a certain extent has been done by the Select Standing Committee on Agriculture and Colonization at Ottawa, in the report of Mr. James M. Douglas, the chairman, appearing in a blue book, dated 1904 and just to hand. In this Mr. Macoun's report is practically annulled, though his evidence is reprinted, as explained, "with such remarks by honorable members as appear therein," any elimination being liable, in their judgment, "to mutilate the same, so as to mar the sense."

The following sentences, abridged from Mr. Douglas' "report" will give an idea of the feeling of the committee with regard to the status of the Peace River country:

They are of opinion that Mr. Macoun was not possessed of sufficient information to make a report upon the Peace River country, and that he was not warranted by the facts within his knowledge in making the report he did, and in arriving at the sweepingly unfavorable conclusion he has. Mr. Macoun spent less than three months in the Peace River country, travelling the greater part of that time on foot. The area covered by his report amounts to considerably over twenty million acres, and it is unreasonable to suppose that any man could, within that time, acquire sufficient knowledge to enable him to make the report and give the evidence which Mr. Macoun did.

Dr. Dawson says: "The soil of the Grand Prairie is almost everywhere exceedingly fertile, and it is covered for miles together by a deep, rich loam which it would be impossible to surpass in excellence." Mr. Macoun, in his report, says of the same district in speaking of its soil: "The loam, as I saw it, varies from four to six inches in depth; it may be deeper in places, but if so, such soil has not been seen by any one whom I have met in the country."

Mr. Ogilvie says that were it not for the difficulty of getting into and out of that country, stock raising might be profitably engaged in. Hay is abundant and of good quality, nearly everywhere; and in summer grazing is excellent. Mr. Macoun condemns this country for stock raising, and in his evidence, upon being asked: "Isn't it good for either cattle or grain?" said, "That is what I say. I don't think it necessary to make it plainer. If you want it definite, it is less suited for cattle as an industry than for grain raising. It is not only difficult to get hay for winter, but it is difficult to get water."

The committee are of opinion that it is regrettable that Mr. Macoun's report was ever printed or distributed, and earnestly advise that no more copies of said report be given to the public until a careful examination shall have been made by reliable experts.

Finally, the committee refuses to decide on the differences of opinion existing between Mr. Macoun and the authorities mentioned, but it is strongly inclined to believe that he had not sufficient knowledge or data on which to found the conclusions he reached.

EMIGRATION AND ITS DETRACTORS.

Strange and beyond reasonable human calculation are the ways of the Social Federationist as of other varieties of the species Trades Union. In England he complains of a congested labor market, and is the first to beg the powers that be for assistance, for relief from the evil in any shape. Relief is offered him; an attempt is made to relieve the congestion by drafting off the surplus laborers to Canada or Australia in the way of emigration. But is this queer type of economist satisfied? Not at all. He objects because his particular commodity, which is labor, is too plentiful for the demand; he objects when it is made less plentiful. We have tried to understand his alleged reasons for this contrary course, but must confess to having failed in the attempt, up to date.

We are referring just now, of course, to the British branch of the great family of labor autocrats. It is they who are bringing up objections against Salvation Army and other schemes for relieving the United Kingdom of a portion of its great ever-present phalanx of unemployed. But that their brethren on this side the ocean are equally cross-grained in matters affecting the position of the workmen is shown, not perhaps so much by their opposition to the Chamberlain scheme as by the manner of their opposition.

In the point at issue, the emigration of British unemployed to Canada, one can understand them feeling, in some measure, averse to such a step, which, in the very act of relieving the congestion in the Old Country tends to bring about similar conditions here. The conclusion a disinterested observer is almost bound to arrive at, however, after a little acquaintance with Labor Trades' habits, is that their chief desire in life is to save hard thinking and to make up for the lack by passing as many resolutions as possible. Of course the latter *is* more imposing!

It is noticeable by the English newspapers that another class also is making objection to the increasing emigration from Old-Country shores and to a certain large extent no doubt they have right on their side. We refer to the following of Jesse Collings. This politician who, by the way, we remember was closely associated in the old radical days with Joseph Chamberlain, claims that there is plenty of room in England for all the men who are without work—if they will only return to the country and find it. Great Britain has at present hundreds of thousands of acres of unworked land, of land only known practically to the fox, to grouse or other game. At the same time that this land is going to waste, the country is importing from colonial and foreign sources, thousands of tons of bread and food-stuffs which ought to be produced at home. True enough! It *ought* to be produced in England, and the thousands of city unemployed ought to be producing it. But this does not solve the problem so far as the unemployed are concerned. It is not their emigration to Canada that stops them from occupying their proper position as tillers of English soil, but the laws under which that soil is held, and meantime, at any rate, until in the dim and distant future those laws are altered, they may just as well come to Canada as starve at home, especially when by coming they help to develop this particular section of the British Empire.

* * *

The Insurance Press learns that the Employers' Liability Assurance Corporation, of London, will embark at an early date in the business of steam boiler insurance.

FINANCIAL REVIEW.

We present below a condensation of the monthly statement of Canadian Banks for September, 1905. It is compared with the Bank Statement for the previous month, and shows capital, reserve, assets and liabilities, and average holdings of specie, Dominion notes, etc.

Canadian Bank Statement.

LIABILITIES.	Sept. 1905.	Aug. 1905.
Capital authorized	$100,646,666	$100,646,666
Capital paid up	83,416,049	83,017,104
Reserve Funds	57,098,426	57,020,468
Notes in circulation	$69,831,259	$62,497,433
Dominion and Provincial Government deposits	10,342,048	9,562,962

Real estate	643,105	788,490
Mortgages on real estate sold	528,948	528,298
Bank premises	10,914,023	10,632,222
Other assets	10,651,978	9,568,861
Total assets	$795,235,045	$782,427,427
Average amount of specie held during the month	19,292,899	18,430,899
Average Dominion notes held during the month	38,369,563	36,980,475
Greatest amount notes in circulation during month	70,619,102	64,486,151
Loans to directors or their firms	8,615,388	8,586,101

With September has come the beginning of the fall activity. Crops have been harvested and a considerable portion brought to market. The railways are busy with shipments of wheat, and already we hear of scarcity of cars at different points, especially at Midland and Parry Sound. The volume and value of the harvest in different localities is now pretty well known, retailers are ordering with confidence and the wholesalers are actively engaged in meeting their requirements. These conditions have their natural effect upon the totals of the Bank Returns.

In the figures representing subscribed and paid up capital the only change of any consequence **is in** those of the Union Bank of Canada, which show an increase under both headings of $300,000. There is not, however, the proportionate increase in the rest which might naturally have been expected.

The chief interest this month is in the amount of notes in circulation, which has increased from $62,497,000 as on 31st August to $69,831,000 on 30th September, or $7,334,000 during the month. During the last five years the figures of circulation have been as follows:

	August.	September.	Increase.
1901	...$51,352,000	$56,027,000	$5,325,000
1902	... 55,035,000	60,965,000	5,930,000
1903	... 60,414,000	63,741,000	3,327,000
1904	... 60,227,000	63,795,000	3,568,000
1905	... 62,497,000	69,831,000	7,334,000

The increase this year is thus twice as large as in either 1904 or 1903. Last month we pointed out that the banks which would supply the greater part of the increase required during the ensuing busy season were the Bank of Montreal, the Canadian Bank of Commerce, and the Merchants Bank of Canada. It may be of interest to compare the figures we then gave with those for September:

	August		September	
	Notes in Circulation.	Available margin.	Notes in Circulation.	Available margin.
Bank of Montreal . ..	$9,053,000	$ 5,347,000	$10,383,000	$4,017,000
Canadian Bank of Commerce	7,149,000	2,644,000	8,124,000	1,695,000
Merchants Bank	3,744,000	2,256,000	4,504,000	1,496,000
	$19,946,000	$10,247,000	$23,011,000	$7,208,000

These three banks have thus added about $3,000,000 to the country's circulation during September, and will be able to supply between $6,000,000 and $7,000,000 more if it should be needed. And at present the indications are that every dollar will be needed. The total circulation being $69,831,000, and the total paid up capital $83,416,000, there is a margin left of $13,585,000. From this, however, must be deducted the paid up capital of the Home Bank of Canada, which is included in the foregoing figures. This bank, although it has begun to make returns to the Government, has not yet issued any notes and is apparently not ready for business. This leaves the margin at $13,233,000. But as the penalties for over issue are very heavy, ranging from the amount of the excess issue, if less than $1,000, up to $100,000, if the excess should exceed $200,000, no bank can afford to run the risk of accidentally exceeding its authorized issue, so that with banks of from 75 to 120 branches it is necessary to keep from $100,000 to $500,000 on the side of safety. This is particularly the case with banks which have many branches in the West and carry large grain accounts. They might easily pay out $100,000 to $300,000 in a day. From $2,500,000 to $3,000,000 is probably about the minimum amount which the banks as a whole must retain to ensure that there will be no over issue. In 1904, when circulation was at its highest, and some doubts were expressed as to there being a sufficient available supply, the total amount in circulation never came within $5,000,000 of the paid up capital. The total addition which the banks can make to their notes in circulation is thus reduced at the very most to $10,000,000. In October last year circulation increased by $8,431,000, and although the exceptional activity in September this year has to some extent lessened the strain which will be felt in October and November, there is every reason to suppose that the increase during the present month will be greater than in October, 1904. If this should prove to be the case—and present indications are that circulation is going out very rapidly—the banks will be up to the limit and will have to fall back on the use of the $1's, and $2's, and $4's, issued by the Government. With all the development which is ahead of us, it is evident that if the boasted elasticity of our currency is to be fully maintained, either banking capital must be increased, or the basis upon which bank notes are issued must be changed. We may get through this year without any inconvenience, but unless the progress of the country should receive a severe set-back, we shall hardly be as fortunate in 1906. The banks now established have authorized capital to the extent of $17,000,000, still unissued, and before next autumn we shall doubtless see a sufficient amount of this paid up and thus made available as a basis for note issues.

Balances due to the Dominion Government by the banks have increased by $1,300,000, almost the whole of the increase being in the figures of the Bank of Montreal. Of public deposits, those payable on demand have increased by $500,000, and those after notice by about $5,500,000, or $6,000,000 in all. In 1903 the increase was $6,200,000, and in 1904 about $4,000,000. The decrease of $2,000,000 in deposits outside Canada is chiefly in those held by the Canadian Bank of Commerce, which have fallen from $9,246,000 to $7,651,000.

On the assets side the totals under the first few headings are practically unchanged. Cash on hand is much the same as last month. Balances due from agencies in Great Britain have increased by $2,500,000, while on the other hand, balances due from agencies abroad have been reduced by $1,500,000. Securities and call and short loans show little change. With the renewal of business activity the addition to readily available assets has naturally ceased for the time being, but the banks still retain the strong position to which we drew attention last month.

Current loans in Canada now stand at $443,011,000, an increase of $5,571,000 over August. In September, 1904, there was an increase of $3,957,000, and in 1903 of $4,992,000. In dealing with the bank figures for 31st March last, we pointed out that the increase in current loans in Canada for the previous twelve months was the smallest for four years, that it was only one-third of the increase in the year ending 31st March, 1904, and considerably less than half that in the year ending 31st March, 1903. At the same time we said that the prospects for the current year were exceptionally good and that 1905 ought to show as much progress as 1903. Six months have now elapsed, and it may be interesting to compare the increase in current loans during those six months with the increase in the corresponding six months of previous years:

			Increase	
	March	September	12 months	6 months
1901	$280,041,000	$286,195,000	....	$ 6,154,000
1902	300,066,000	303,518,000	$17,323,000	3,452,000
1903	346,292,000	373,633,000	70,115,000	27,341,000
1904	403,566,000	412,197,000	38,564,000	8,631,000
1905	422,351,000	443,011,000	30,814,000	20,660,000

As compared with those on which we commented in April these figures tell a very different tale. If the course of current loans in Canada is any indication of activity in business it is evident that the past six months cannot have been unsatisfactory. We have easily distanced 1904 and are treading closely on the heels of 1903.

The remaining items of the balance-sheet call for little comment. Current loans outside Canada have increased by $1,700,000, and overdue debts by about $100,000, $90,000 of this latter increase being in the figures of the Eastern Townships Bank. Real estate shows a decrease of $145,000, almost the whole difference being in the holdings of the Molsons Bank.

Total assets now stand at $795,235,000, as compared with $719,650,000 in September, 1904. During the month they have increased by $12,808,000, while in the corresponding month last year the increase was $18,020,000. In that month, however, call loans outside Canada increased by $7,000,000 the result apparently, of an increase of $5,000,000 in deposits outside Canada. So far as Canadian business is concerned, the increase in assets this month is rather larger than in September, 1904.

⁂

POACHING ON THE GREAT LAKES.

It is with satisfaction one notes that the International Waterways Commission proposes to take up the question of poaching by fishermen of Canada and the United States respectively, in the waters of the other country. It may be remarked parenthetically, however, that the sin of commission has usually rested with those of the latter country. Be this, as it may, the trouble between fishermen and a Government cruiser is one that may quite easily develop at any time into a serious quarrel between the two nations. A boat sunk, or a few men killed by shots from the water-police of the other nation is just the sort of beginning from which hot popular feeling goes to the extreme of a desire for revenge in kind. And incidents likely to lead to such disastrous culmination seem to be becoming more and more frequent. It is all very well to orate on the rights and justice of the Canadian case. No doubt American fishermen ought not to poach on Canadian waters. But they are human, and it is probably quite easy for them, without very seriously troubling their consciences, to claim they did not know they had crossed the boundary. And having crossed that boundary, and been sighted and chased by a Canadian cruiser, it is quite human for them to take to their heels and try to make good their escape at the risk of being sunk or injured.

However, such chances of acute friction between two friendly peoples ought not to be allowed to have the chance to arise, and anything the Commission can do to diminish that chance is to be welcomed. Representatives of both the United States and Canada are said to be in favor of the attempt. One suggestion is that the boundary line on the lakes should be marked by buoys, also that maps be prepared showing the division between the two territories, and attached to every fishing license issued, so that no fisherman should be able to plead ignorance on this score.

Still, when plying their trade on bodies of water such as these, ranging from forty to a hundred and forty miles in width, it may not be an easy matter to maintain buoys or otherwise to make plain to fishermen their whereabouts in the eye of international agreement.

American fishermen cannot be allowed to take advantage of Canada's superior resources simply because their government has allowed their own to become depleted. At the same time, no stone should be left unturned to prevent any occasion for quarrel with our near neighbor, which would be altogether too high a price to pay.

⁂

THE LEATHER AND ALLIED TRADES.

Abatement still seems to be a long way off in respect to the strength of the position of hides. At the same time it is not to be forgotten that the Canadian market is one that sometimes in the past has shown itself to be somewhat erratic. That is, it is subject to sudden advances and sudden declines without very clearly defined reason. Take the present high valuation to illustrate. So far as one can learn there does not appear to be any strong speculative influence at work. Supplies of hides, while light, are not very particularly so for this season of the year, while the demand, which is no doubt to a certain extent restricted through the high cost, is certainly not greater than has often been prevalent before. It has been thought by some that stocks have been kept back with the idea of still higher prices, but those quoted already should, it would seem, be surely sufficient to attract such if they were in existence. Be the reason what it may, prices are exceedingly high. The quality of hides coming into the wholesale markets is distinctly good, but this is nearly always the case at this season of the year.

The situation in leather, especially upper leather, is, as may be conceived from considering that of hides, very strong. Sole leathers have not shared greatly in this activity, owing to a falling off in the demand from Great Britain. Prices in nearly all grades, however, are very firm, and holders seem more determined to keep up values in earnest than was the case a few months ago.

The feeling of boot and shoe manufacturers is naturally affected by the high cost of their chief raw material, and when it is added to a similar condition in findings, trimmings, and other materials, as also in labor, it is easy to see that a constant tendency to advance prices is to be noted on every hand. This has been the actual case though some of the jobbers have, it is said, felt aggrieved in consequence. Business, generally speaking, has been quite satisfactory. Stocks in the hands of retailers, some of whom in spite of all presumption to the contrary, have been looking for an easing of prices, have been kept in rather small compass throughout the fall, and a good sorting trade has resulted and kept the wholesale houses well employed. The trade in fall lines was good. Altogether, it seems safe to say that the complete total of the year's trading will show good figures, as indeed is to be expected from the prosperity of the country and the bountiful crops this past season.

⁂

PHASES OF THE AMERICAN INSURANCE EXAMINATION.

Readers of the testimony in the life assurance examination ought not to be carried away into losing confidence in life assurance because some officers of companies have been shown to be venal and wasteful. It is very desirable to remember that there are many life insurance companies in the United States which have not been guilty of the extravagances or the excessive salary lists of the "Big Three," as those companies are called whose recent examination brings them so much into the public eye. Some of the testimony already given shows that important companies are free from certain leaks that characterized the New York three; and we have heard during the present week of several companies who were asked for súbscriptions to political funds at election times and absolutely refused them. It should also be borne in mind that while policyholders are by these high-handed excesses mulcted in the lessening of their profits, they have no adequate reason to decry the value of the principle of life assurance or to be apprehensive that their policies will not be paid at death.

Still these recent events in the life assurance world suggest a condition of things in commercial and financial circles of the United States that is not pleasant to contemplate. Is there no reason to suppose that in other directions than life assurance the same nepotism, self-seeking, recklessness of expenditure, may prevail? May we assume that the banking world, the field of commerce and manufacture, are clear of such blemishes? It would be too much to expect. The love of money and the craze for money-making are having a corrupting influence on American life, and there is grave need for some corrective. We have been struck by some recent words of the New York Journal of Commerce on the subject of "Corporate Irresponsibility and Individual Honor." Discussing the revelations now being made in life assurance circles as indicating a readiness to trifle with one of the most sacred of trusts, that journal declares that existing statutes are "powerless to check the pursuit of gain by methods equally at variance with law and morals. * * * But it has yet to be shown that, under a vigorous and impartial administration of the law as it stands some of the chief offenders in the misapplication of life insurance funds cannot be sent to jail." But the statute law apart, and considering the present situation from the point of view of high morals, the Journal of Commerce reaches much the same conclusion as the Outlook did the other day. We quote the strong indictment of the former journal:

> It has been convincingly shown that the chief officers of three great companies had only the crudest sense of business honor; the most imperfect conception of elementary principles of morality. Without any apparent sacrifice of self-respect they were in the habit of doing things which, tested by any conceivable standard of business ethics, were flagrantly dishonest. It is this deadening of the moral sense among men holding some of the most conspicuous and highly-paid positions in the country—men of otherwise reputable life, respected and esteemed by their friends and neighbors—that is the most discouraging revelation of all. Some of them have shown pride in their academic culture; others in their ability to command success without acquiring the wisdom of the schools; but neither the training of the college graduate nor that of the self-made man appears to have lent itself to the quickening of conscience or the development of the sensitive honor which is reckoned one of the chief attributes of a gentleman. Exquisite refinement in their domestic surroundings; luxury pervaded by the highest artistic taste, and fastidiousness as scrupulous as it is correct, are with most of these men among the commonplaces of daily life. Yet all this has co-existed with the moral attitude of a bunco steerer, the business practice of a fence. No more impressive illustration has been given in our time of the extent of the demoralization which has been wrought in American society by the wild struggle to get rich quickly—by the general acceptance of the most vulgar of all forms of success as the highest, if not the only worthy, object of human endeavor.
>
> That the directors who did not direct must share part of the responsibility for the misdeeds of the officers who treated their trusts as a private snap is too obvious for argument.

* * *

OVER-BUSY LEGISLATORS.

An American contributor sends us in the following extract from a Kansas statute, an example of feather-headed folly being allowed to wear its cap and bells in the very state-house where laws are made. We give it as he has copied it from a recent law of that state defining and governing automobiles:

> Section 1. That the term "automobile" and "motor vehicle" as used in this Act shall be construed to include all types and grades of motor vehicles propelled by electricity, steam, gasoline, or other source of energy, commonly known as automobiles, motor vehicles or horseless carriages, using the public highways and not running on rails and tracks.
>
> Nothing in this section shall be construed as in any way preventing, obstructing, impeding, embarrassing or in any manner or form infringing upon the prerogative of any political chauffeur to run an automobilious band-wagon at a rate he sees fit compatible with the safety of the occupants thereof; provided, however, that not less than ten nor more than twenty ropes be allowed at all times to trail behind this vehicle when in motion, in order to permit those who have been so fortunate as to escape with their political lives an opportunity to be dragged to death; and provided further that whenever a mangled and bleeding political corpse implores for mercy, the driver of the vehicle shall in accordance with the provisions of this bill "throw out the life-line."

In commenting upon this silly addendum to Section 1 our correspondent says: "It seems almost incredible that any legislature in the world could be found willing to permit such nonsense to appear upon the statutes, but it is nevertheless true in this case. The instance may serve to partly explain why the laws, as well as those who make them, are held in such contempt by many intelligent and respectable people in this country."

It staggers one a little to hear of respectable and intelligent people in United States having a contempt for the laws and the law-makers of their own country. And yet it is undeniable that much of the recent law-making of that country, and of other countries, our own included, has been of a character which does not command respect. The truth is there is too much law-making now-a-days, for not only is much of it needless, but, as Herbert Spencer said, a great deal of it consists of amending or unmaking the laws of previous legislatures. By each of the last two legislatures of New York State more than seven hundred new laws were added to the total of its jurisprudence. This is an appalling number, in an old state, where all ordinary and natural subjects of legislation were covered, years ago. In great part, a recent writer tells us, "these new laws are tinkerings and fixings-over of old statutes, to gratify a legislator's whim that he can do it better." But how impossible to keep track of all these amendments or new enactments. How wearying, how irritating, for either representative or lawyer to attempt to acquaint himself with the changes in legislation during even one session. Better far to understand and properly administer the laws we have than try to cure all evils by new laws. No wonder the president of the American Bar Association, himself a Virginian, declared, the other day, that: "What impresses one most deeply in an examination of the legislation of the States is the number and variety of subjects of legislation and the assumption (I will not say always improperly) by the state of functions which in our earlier history were unclaimed by it. We are a much-governed people, and there is nothing which affects the American citizen, from infancy to the grave, awake or asleep, in motion or at rest, at home or abroad, in his personal, social, political or property rights, which is not the subject of regulation by the state. Indeed, whether we eat or drink, or whatever we do, we do it all in subordination to the law of the state."

* * *

WAGES AND EMPLOYMENT.

One thing to be remembered in connection with the average wage-earnings of the industrial classes in Canada, as stated in the Census reports, and referred to in our previous issues, is the fact that the average in many, probably most, of the industries named, is considerably smaller than it needs to be. There are several trades in which, either from their nature, from the regulations of trades unions (for example, the glass blowers), or from established custom, the employees do not work full time. Some lay off for the hot weather and some for the cold, and others perhaps from laziness. Then there are the holidays. Some employers also suffer inconvenience from the difficulty of getting their full staffs to work immediately after pay day. Again, strikes are apt to diminish or even extinguish earning capacity sometimes for months together. Complaint is made in Great Britain of the delays, and even loss of business, sometimes caused by trade customs or practices which hinder progress and to some extent reduce the capacity of costly plants. In the United States strikes are always affecting some industry or other in some part of the country, and by reducing earnings locally lower the average generally. It can be said with reason that, to a considerable extent, the average wage earnings of industrial workers might be appreciably increased if all were anxious to earn and take advantage of their opportunities.

* * *

GOVERNMENT OWNERSHIP.

President Roosevelt being one who is looked upon as not strongly biased in favor of corporations, his opinions on Government ownership are of interest. The other day he declared very strongly against leaving to the Government the ownership of anything that can with propriety be left in private hands, particularly railroads. On the other hand, he spoke strongly in favor of Government regulation of railroad rates, and of Government investigation of railroad accounts. Abuses, he said, of which we have a genuine right to complain take many shapes. Rebates are now often given openly, but they can be given just as effectively in covert form, and private cars, terminal tracks and the like must be brought under control of the commission. "But," he added, "in my judgment, the most important thing to do is to give to this administrative body power to make its findings effective And this can be done only by giving it power when complaint is made of a given rate as being unjust or unreasonable, if it finds the complaint proper, then itself to fix a maximum rate, which it regards as just and reasonable, this rate to go into effect practically at once, that is, within reasonable time, and to stay in effect unless reversed by the courts"

* * *

INSURANCE INSTITUTE OF TORONTO.

The Insurance Institute of Toronto held an open meeting on Tuesday night in St. George's Hall, Elm Street, where a large and interested gathering was assembled. The chair was occupied by Mr. John B. Laidlaw, manager in Canada of the Norwich Union Company, who is president of the Institute for the current session. After referring to the good work being done by the Institute for the young men in insurance life, Mr. Laidlaw proceeded to refer to the disclosures now being made in the examination of life insurance company officers in New York. There can be no question, he declared, as to the absolute solvency of the great life insurance organizations in the United States and in this country, and the press should warn policyholders against dropping their policies, as it is said many are doing. At the same time there is danger lest the public in their surprise and anger at what is bad may attack what is good; and the speaker urged that the public should not be misled by unwise and uninformed agitators in the premises. He anticipated the difficulty that would be found by company managers who fight against excessive commissions and high expense ratios. Theoretically these are improper, and should be reduced; actually, they are in existence, they are common, they are hard to uproot, and unless a man is disposed to row with his agents and quarrel outright with his competitors his hair will be grey before he does away with them.

Mr. David Burke and Mr. B. Hal Brown, of Montreal, were the first speakers. The former gentleman brought the congratulations of the Montreal Insurance Institute to the Toronto one. He asserted that the Canadian life assurance companies were open to the fullest investigation, and would readily open their books for such a purpose. In Canada, he pointed out, there is an annual investigation of the affairs of insurance companies by a Government staff.

Mr. Brown was indignant at the undiscriminating and poorly informed criticism of insurance matters by many journals in this country, and went on to urge the value and dignity of life assurance. Let wrong-doers be punished, he said, in insurance as in anything else; but do not say that there is no such thing as honest administration of life assurance companies' affairs. There is abundance of it on both sides of the Atlantic.

Hon. James J. Foy, Attorney-General of Ontario, Mr. H. Blain, Dr. J. Howard Hunter, Provincial Inspector of Insurance, Mr. J. J. Kenny, Rev. E. D. McLaren, and Mr. J. K. Macdonald, made addresses more or less brief, and the proceedings, which had been enlivened by recitations and musical selections, terminated by refreshments for the physical man.

* * *

A VISIT TO MANCHESTER.

In Manchester, by application to the master, a companion and myself [we were not at this time travelling with the Canadian Manufacturers] were furnished with passes to the Manchester Royal Exchange, to witness the gathering of merchants there. It was a memorable sight. The room is a huge one: I should guess its dimensions at 150 by 250 feet, the architecture solid and stately, and here were assembled *thousands* of members for purposes of traffic. But there was no such pandemonium of excited voices as on the Paris Bourse or the New York Stock Exchange. No! The business of John Bull must be carried on sedately, as becomes a sedate people with whom trading is no sudden flash in the pan, but a matter of reflection. The gathering of men, as we viewed it from a gallery, was so dense that we did not at first distinguish any grouping. But presently it was perceptible that there were all over the room centres of interest, such centres being roughly indicated where possible by letters of the alphabet of large size affixed to the marble pillars. These letters marked the spots at which sellers or buyers of a particular commodity, as wool or corn, were expected to meet. Evidently their trading was not done by shouting, but conversationally and in a low tone, otherwise there must have been a greater Babel of tongues than we heard. It was an impressive gathering, and appealed to the imagination. One of the great world-centres of commerce was here in action. Here were, as our own Joseph Howe put it eloquently at a great convention of American traders in Detroit: "Merchants who think in millions—whose daily transactions would sweep the harvest of a Greek Island or of a European principality." The echoes of conversations we could almost hear would in an hour or two be heard in the Mediterranean or on the Pacific. There was great variety in face and manner amongst the crowd, but gravity in looks and demeanor was the rule. These men had no time, apparently, to joke as members of a New York or a Montreal similar group would be sure to do. They believe as Mr. Tarte does—though with a different significance—that "Business is business"; and the Englishman takes his recreation after business is over.

An excellent cicerone took me to the Dairy Exchange through street after street crowded and redolent of cheese, butter, and bacon. Once inside the unpretentious building we found an extraordinary number of edibles represented by show-cases and samples. It was the writer's belief that Canada must have a distinctive and easily recognizable place in any such assemblage, but his faith was subjected to strain. By persistent enquiry and visiting of booths we found some Nova Scotia fish and some other Canadian edibles represented, but interest in Canada seemed to be languid, judging from replies to our questionings. It was borne in upon the Canadian visitor that his country was only one among many in this Exchange, and that big as she is she is not a heavy factor in this world's-market. It was necessary to come over here to find out what a considerable role is played by those west of Europe countries, Denmark, Holland, and North Germany, of which the average Canadian knows so little.

Of course one saw the Manchester Ship Canal, which is at once the pride of the city and the wonder of those who realize how far Manchester is from the ocean. But as descriptions of it have appeared in The Monetary Times already I shall not venture upon any particulars. It was August, and the writer was learning how hot a day can be in the Midlands in a temperature of 78. It was hotter than Montreal or Detroit at 88, so different was the air. The tram system took the visitor out to Trafford Park, so much of which has been secured, apparently, for canal basin and warehouse purposes, and really the extent of the enterprise justifies it in being called huge. While in the park neighborhood I bethought me of a letter of introduction from a Toronto friend to the man in charge of the extensive works of the British Westinghouse Company, and went to present it. Unhappily the day was a bank holiday, the works were closed down and the manager was away. The most I could do was look around the silent interior of one of the immense workshops, being permitted to do so by a very intelligent caretaker. It was not difficult to imagine what these premises would look like when in full swing, overhead cranes travelling, shafting buzzing, lathes revolving. One thing the caretaker did for me, little as I expected or perhaps as an uninstructed visitor deserved it, was to show me around one of the shops. This, doubtless, was because I was a Canadian, and Canadians are "white-haired boys" with the English people in these days. At any rate I saw on that occasion what it had long been my desire to see, the interior economy of a turbine. Several of them were exposed around the big shop, in process of construction or possibly of repair, and I learned what had always puzzled me before namely, the method of so guiding the steam among the intricacies of the interior structure of this modern invention as to get the most force out of its direct pressure.

* * *

LIFE INSURANCE NOTES.

We learn with interest that Mr. R. H. Matson, formerly managing director of the National Life Insurance Company, has been appointed to the position of superintendent of agencies for the Home Life Association of Canada. Mr. Matson has many friends and has a good knowledge of Canada and of the life insurance business. He may be expected to give an excellent account of himself in the campaign which he has already undertaken.

The Louisville Courier-Journal has the following anent the life insurance examination now going on in New York. Says one hay-seed to another: "Well, old Si Perkins, the feller who wunst bought a gold brick, has been the laughin'-stock of this county fer twenty year, but his turn has come at last." "How's that?" "He's about the only man in the township that hain't got a life insurance policy."

In the course of a striking speech at the Mansion House, on Wednesday, on the serious menace to the efficiency of the Church of England, caused by the number of aged incumbents who are unable to retire owing to their lack of means, the Bishop of London made the practical suggestion that—"Possibly we may have to introduce a system of compulsory insurance under which clergymen—and perhaps even bishops—will have to submit to the decision of a board of their peers as to their retirement."—Insurance Record, London, Eng.

A dainty book of 46 pages is sent us with the compliments of the directors of the Caledonian Insurance Company. It is entitled the History of a Hundred Years, 1805 to 1905, and gives interesting sketches and anecdotes of life and fire business done by that company in various parts of the world under five British Sovereigns. One portion of the book is of peculiar interest, namely, that devoted to managers and secretaries, beginning with William Braidwood, 1805, and closing with Robert Chapman, the present manager. Among the illustrations, of which there are many, is an excellent portrait of the late David Deuchar, F.F.A., F.I.A., who attained uncommon and well-deserved prominence in the underwriting world. A portrait is also given of Lansing Lewis, manager of the company for Canada and Newfoundland.

* * *

FOR GROCERS AND PROVISION DEALERS.

An interesting compilation by the United States Department of Commerce and Labor, shows that the estimated total weight of cows' milk produced in the world is 26,400,000 cwt., distributed as follows: Canada, 1,300,000; United States, 6,100,000; Russia, 3,500,000; Germany, 3,000,000; France, 200,000; England, 200,000; Austria, 1,700,000; Italy, 1,450,000; Holland, 1,200,000; Spain, 500,000; Sweden & Norway, 800,000; Switzerland, 700,000; Denmark, 600,000; Belgium, 600,000; Australia, 550,000; and Portugal, 500,000. The production of milk in Europe is 18,450,000 cwt., from 45,000,000 cows. The number of milch cows in the world is 63,800,000—15,940,000 in the United States, and 10,000,000 in Russia. There are only six head of horned cattle in Spain to each two and a half acres of cultivated land, while in France there are 34 head, and in England 56.

The American Consul at Dublin says there is a large and growing market in Ireland for American wheat. The recent prices for Australian wheat were 32s. 6d. per quarter ($7.92), and wheat of the same quality sold last year at 29s. per quarter ($7.06). He says that as Irish wheat plays no role in the baker industry the cheaper loaf will have to make its appearance only in the event of a very much increased importation of wheat, and that wheat may be looked for, or rather must be looked for, from our western states, and must be sold in Ireland at lower prices than it has commanded of late. Reductions in wheat—even slight ones—would give United States manufacturers of flour a tremendously large market in Ireland. It should be suggested again, as in the case of other produce, that the Irish trade can be captured with better advantages if a central depot is established in Dublin, thus avoiding excessive freight rates, and middle-men; and a more strict method of doing business would soon clear the way for a flourishing market. This is what the representative of our neighbors says. But if the United States and if Australia can send wheat and flour to Ireland at a profit, why cannot Canada?

* * *

FIRE INSURANCE ITEMS.

Here is an instance of either public spirit or enlightened selfishness—one cannot say which without knowing more of the circumstances—but this is the story: Because Decatur, Ill., has no funds with which to purchase water pipe for fire protection, the H. Mueller Manufacturing Company has offered to furnish the pipe necessary.

An insurance agent called upon Mrs. George Conrad, of Red Bank, N.J., says the Philadelphia Record, and asked her it the family desired to renew a policy which Mr. Conrad carried on the contents of a barn leased by him on Washington Street. Mrs. Conrad told the agent in Mr. Conrad's absence that they did not care to reinsure the contents, as there was no need of it. The agent had gone but a short distance when the barn was discovered in flames. The contents were destroyed. Mrs. Conrad now thinks she was a little too hasty in her decision.

Agent, writing from Windsor, N.S., on the subject of neglect of fire insurance by retail merchants or others who are getting credit, says: "Your remarks on this matter are in order. Why don't you keep at it. There are numbers of people who lean all the time on their wholesale houses and would lean on their bank if they were allowed to. And yet these people grudge to pay $20 or $50 a year for insurance enough to get their debts paid if they burn out." We find in an address by Mr. Given, president of the Pittsburg Association of Credit Men, the following upon this subject: "A statement will also show whether stocks are adequately protected by fire insurance. So many losses are attributed to lack of insurance that good credit men [i.e., supervisors of credit] are refusing accounts not so covered."

Under the heading of "Curious Fire Claims," the Investigator instances the following: When the newspaper man walked into the local agent's office, the agent said: "What do you think of that for a claim," picking up a paper from a pile on his desk. The newspaper man asked for information. "Well, it was this way," was the reply. "A lady called at the office of a physician to have her eyes examined. The light wasn't quite right and the doctor gave her an umbrella to hold over her head while he surveyed her optics. She brought the open umbrella in contact with a gas jet and burned a hole in it. Here's a claim for damage to office furnishings, $1.50." "The only one I know that beats it," continued the agent, "is the story of the woman who left a roast of beef in the oven and went to talk to a neighbor over the fence. When she returned the meat was burned to a crisp. She put in a claim for a fire loss on eight pounds of beef. But that wasn't my office and I can't swear to the truth of it. The umbrella claim, however, is straight goods."

* * *

DRY GOODS NOTES.

We receive word of the death at Port Dover of Jonathan Ellis, president of the Ellis Cloth Manufacturing Company, Hespeler, Ont. For some years also he conducted a woolen mill at Port Dover. He was about sixty years of age and left a widow and nine children.

British newspapers refer approvingly to the course recently adopted by the Imperial Government in following the plan adopted by Canada and having trade correspondents in South Africa and other countries. The Board of Trade is called on by the Liverpool Post to organize some system to publish the information thus obtained broadcast among those concerned.

Dry goods men and other merchants in St. John, N.B., are considering what steps they shall take in view of the approaching visit to that city of the tariff commissioners. They appear likely to ask for the abolition of the surtax on goods coming in from Germany. There are some lines of goods, notably millinery supplies, which they claim are not made anywhere but in Germany, and for which there is a steady demand here. They believe that the duty on these goods of fifty-two per cent. is unnecessarily high. Another point which they wish to have threshed out is in regard to dress goods and cloth made in England. A year ago a change was made in the preferential clauses of the Tariff Act, and woolens made subject to a minimum duty of 30 per cent. as against 27 per cent. before the change. The St. John dry goods merchants propose to ask the Government commissioners that woolen goods be again included in the preference clauses, as high protection is not needed.

The lumber barge "Vesta" was, on Wednesday last, burned to the water's edge at St. Michael's Bay, an indenture of Georgian Bay. It was a large vessel and owned by W. J. Pulling.

It is understood that a company is in course of formation in London, Ont., for the purpose of generating electric power near Kilworth, some eight miles from the city.

The assignment is reported of G. A. Fleury, general merchant at Scott Junction, Que. He was formerly a farmer at Ste. Marguerite, and less than a year ago sold his farm for, it is said, some $1,500, in order to engage in storekeeping. His affairs are in the hands of V. E. Paradis, accountant, Quebec, and he is said to owe $3170. May he be compelled to go back to farming. It will be a kindness to him.

Messrs. Marion & Marion, patent attorneys, Montreal and Washington, D.C., report the following patents secured last week through their agency: Canadian patents — 95,558, Herman Greenberg, Montreal, fountain pen; 95,574, Omer Gariepy, St. Lin, ditching plough; 95,585, John E. Davidson, Toronto, heels for boots and shoes; 95,619, Francis M. Hews, London, Eng., machine for casting types; 95,634, Isaie Frechette, Montreal, hair and hat securing device; 95,649, Paul Meurisse, Lile, France, steam boiler; 95,654, Henri Riche, Paris, France, mixed gas producer.

FRUIT IN ALBERTA.

While it is scarcely correct to speak of the treeless West, which is the habit of so many people in Eastern Canada when referring to the great plains, it is certainly a country without fruit. That the small fruits, such as strawberries, raspberries, etc., have been grown with success in some sections is true, and I, myself, in Calgary, saw some white currants as fine as any I have seen anywhere. It is true also that Manitoba produces some good varieties of crab apples, and that some kinds of the hardy Russians seem to do well. But at the same time, so far as the present is concerned, the Canadian West, of course leaving out of consideration British Columbia, which bids fair to become one of the finest fruit-raising sections on the continent, is a country without fruit of its own growing, and this fact in the eyes of many a visitor from Ontario accustomed to the sight of beautiful orchards of varied apples not to speak of vineyards and groves of peach and plum, is sufficient in itself to prove an irretrievable drawback. This frame of mind is not to be wondered at. The absence of fruit, from the view of picturesqueness, variety of agricultural resources, healthfulness, and several other points, is bad enough; but besides these things it serves to draw suspicion to the climate as perhaps nothing else can do. In this connection, I remember hearing a little argument between a typical Westerner and a somewhat prejudiced lady from Ontario. The gentleman in question was dilating in enthusiastic terms—and no true Westerner is ever anything but an enthusiast when referring to his own section—on everything connected with the glorious West, its marvellous progress, its fertility of soil, its beautiful weather, and so forth. The lady was convinced on many points, though evidently only against her will, and she gave a rather demurring assent to most of his propositions. Finally, however, she asked:

"But what of the Western fruits; what sorts do they grow?"

"Well, we don't grow fruit," was the reply, "the climate doesn't seem—"

"Oh, I see," ejaculated the lady in triumph, "it's the climate. Well, if the much-praised climate of the West is not good enough to grow fruit, it isn't good enough for me."

The apologist of the West had made a *faux pas*, which he at once recognized as irreparable; and was at a loss for further argument.

This incident happened in Alberta. Yet, near Edmonton, which is not even near the southern boundary of that province, I have seen apple trees growing thriftily and, considering their age, fairly well laden with good-sized, good-colored fruit. It is true the trees were but two in number and it is true that I drove out of my way to see them, and that they were looked upon as curiosities. At the same time, what has been done can be done, and the question is, how to do it on a larger scale.

During my brief stay in this more westerly of the two new provinces, I did my best to discover wherein the chief difficulties in the way of growing fruit might consist. The soil is rich, deep, and apparently well-drained; it is not too heavy; moreover, according to all reports, it does not bake in summer, while in winter, there is surprisingly little of the "heaving" with which Ontario farmers are familiar. Spring frosts occurred to my mind, and perhaps this may be the root of the failure, though several people, to whom I spoke on the subject, were disinclined to accept them as the real explanation of the failure or neglect.

Still, there must be some cause, and possibly the cause hinges largely on the question of varieties and methods. In a new country, where people have to build from the ground-floor up, there is little temptation to go beyond the actually assured. Time is short, labor is shorter, and money not over-plentiful. The things that are put in the ground are those that mature quickly and that are comparatively sure. Fruit planting is the product of greater leisure, of perhaps a higher grade of civilization. Fruit is a necessary, but then it is a necessary which impinges closely on the luxuries. Perhaps in these few data will be found the answer, at any rate the explanation, of the problem. Driving one day in Central Alberta with a prospective new settler, a highly intelligent American farmer, he remarked to me, that when he first went to his present location in the State of Washington, everybody there said it was of no use planting fruit trees, they would not grow. To-day that valley, he described, has more than a local reputation for its choice fruits. The question is, what has happened? The climate is the same as it was twenty years ago, and so is the soil. The problem, therefore, resolves itself into one of experimenting with different varieties, as I have already intimated. But, as remarked in the same connection, the settlers in a new country are not in a position to carry on experiments; they cannot afford the money, or the time from other occupations, to run the risk of the failures, which are sure to intervene before success becomes theirs.

There would certainly seem to be a good argument in these considerations for the establishment of one or several experimental stations in the most typical situations, and the Government has already been petitioned, I believe, with this end in view. The climate of the region around Calgary is quite different from that prevailing in Manitoba, and the climate of Edmonton is different from both. Experimental stations in charge of experts who could take time to test the most promising varieties of fruits for our far West might do much to remove the latter's chief reproach in the eyes of Eastern people, and apart from fruit culture there is a multitude of problems constantly arising in the general agricultural conditions of a but partially settled country, of which the speedy solution may mean the saving of considerable money, to say nothing of misunderstandings and disappointments.

F. P. W.

Calgary, Alberta.

BRITISH EXPORTERS TO CANADA.

We should have acknowledged sooner the receipt of a copy of the Mercantile Year Book and Directory of Exporters, edited by Walter Lindley Jones, F.R.G.S., and published at 21 St. Helen's Place, London, Eng. This is no new publication, for English exporters have been familiar with it since 1884. There is a walking guide, 92 pages in extent, to the shippers of London, in street order, probably intended for such as, in pursuance of the Scotchman's early notion of economy, desire to walk. Its list of foreign importers extends over 150 pages, and their number may be inferred when we say that the places of their residence all over the globe are no fewer than 680. One part of the book gives the principal classes of goods shipped from London and the names of their shippers. Lists are given, too, of merchant exporters in Manchester, Liverpool, Birmingham, Leeds, Bradford, Bristol, Glasgow, Nottingham, Huddersfield, in the United Kingdom, and of Paris, Hamburg, Berlin, Bremen, Chemnitz, Dresden, Leipzig, Amsterdam, Rotterdam, Antwerp, and New York, in foreign countries. We should judge this to be a valuable directory for exporters, or, indeed, for importers.

In looking through the book to discover what sort of list it gave of Canadian importing merchants, we confess to a feeling of disappointment because of the small number of them. Not that we would find fault with the book alone in this respect. Lindley Jones, no doubt, will say, if blamed for this: "I tell the tale as 'tis told to me." But it will help to exhibit to Canadians how small a share they occupy in the export machinery of the Kingdom's trade, if we say that while this directory gives 36 places in the West Indies and 113 names of traders in them; devotes to Australia and India 19 pages each, with an average of 350 names each; to China and Japan 11 pages, with 435 names; Canada has only two pages with 61 names in 14 places. Why, the Philippines or the Straits Settlements have almost as many names as we. If any Canadian says: "But there are more importing merchants in Canada than 61," we reply that this is very likely, we believe they are many times 61; but the compilers of such a book as we are describing probably use the same

means to ascertain Canadian importers that they do others. It is part of their success, a necessity of their reputation, to be reasonably accurate, and either Lindley Jones & Brother have got hold of only the fringe of Canadian importers from Britain or Canadian importers have made a smaller impression on the vast total of British exports than even the Board of Trade figures show.

* * *

SOUR GRAPES.

When a business firm feels the necessity for belittling its rivals, and when it stoops to misrepresentation of their claims and resources, everybody suspects that something is radically wrong with its own condition and surmises that the firm itself recognizes its own weakness. Something like this would appear to be the matter with Western Australia. The Government of that State recently issued a report which not only was full of its own alleged superior advantages as a field for immigration, but attempted to fortify its position by gross misrepresentations of Canada. This is done by dwelling largely on the supposed drawbacks of the Canadian climate, and by a garbled repetition of experts' evidence as to the prevalence here of insect pests and so forth. Then there are carefully selected statements as to the danger to Canadian crops from frost, the scarcity of fuel in the North-West, the scanty rainfall and a dozen other statements taken out of their true context and made to loom larger in the eyes of a prospective emigrant from Britain's shores who is contemplating settling in one or another of His Majesty's possessions across the seas. The upshot of the comparison is that if a man will but put half the time and energy required to make a living in the North-West, into a farm in Western Australia, he will meet with quick prosperity. This may be all so, but it would have come with better grace from Western Australia if its Government had allowed the mere facts of its attractions to speak for themselves without having to run down those of a sister colony. This course always looks suspicious.

* * *

THE LATE WILLIAM INCE.

The death of Mr. William Ince removes one of the oldest merchants in Toronto, and one who had taken part freely in many activities which tended to benefit the city and surrounding country. He had lived here for seventy years. At his death he was senior member of the well-known wholesale grocery house, Perkins, Ince & Company, which he joined more than half a century ago. For many years he was on the council of the Board of Trade, and in 1887 was chosen its president. And in the days of the narrow-gauge railways out of Toronto, viz., the Toronto and Nipissing, and the Toronto, Grey and Bruce, he toiled along with George Laidlaw and others for their establishment and became vice-president of the first-named company. In later years he assumed other positions of a commercial kind, being at the time of his death a director of the Dominion Bank and vice-president of the British Canadian Loan Company. He was prominent in Church of England work and had been a trustee of Trinity University. His remains were followed to the grave on Monday last by a large gathering of the most prominent people of the city, who had known and admired the genuineness of the man, his scrupulous integrity, his kindliness of heart and his refusal, through a long life, to postpone duty to convenience.

Mr. Ince was a good business man and a thorough grocer. Coming out from Ireland as a small boy he went into a grocery shop, George Moore's, on King Street, in the Rebellion year, 1838, and was afterwards manager for Mr. Cameron of a grocery business in the St. Lawrence market. About sixty years ago he entered the firm of F. & G. Perkins & Company, and in 1856 became a partner. Some twenty years later, Mr. Frederick Perkins retired, when Mr. George Perkins, Mr. Ince and Mr. John W. Young continued the business under the name of Perkins, Ince & Company. Of conservative views, but imbued with honorable principles, his influence and example have assisted not only to maintain for his house the high standard of business dealing it has always held but to promote commercial uprightness in the community and to discountenance sharp practice.

It was interesting to hear Mr. Ince tell of the early days of business in Canada, for he was a veritable "Old Timer," though no one would take him to be 81 years of age. Long ago, he has told us, purchasers gave their notes for what they bought at as long a date as they could, and renewed them as often as they could. "If they paid $25 on $100, and renewed their notes for three months, they thought they were doing very well. Of course this system often involved considerable loss on our part, but as profits were considerably larger than they are now we were able to stand it." Further, as the deceased gentleman told an interviewer this very year, the earliest wholesalers were not confined to one particular line. "Our firm handled all such articles as nails, chains, anvils, spades, harvest tools, paints and oils, etc.," he explained, "besides the regular lines of groceries. This was done because our customers, the country storekeepers, came in with their teams for their supplies, and naturally wished to get all they could in one place. For many years all goods had to be distributed by teams in the winter, and, where possible, by boats in the summer. Goods were taken by boat to points on the lakes, and from there distributed to the interior. The first Ontario railway, the Northern, was commenced in 1852, followed soon afterwards by the Grand Trunk."

* * *

CANADIAN LIFE INSURANCE OFFICERS' ASSOCIATION.

The annual meeting of this association was held on Tuesday, the 24th October, in the board room of the King Edward Hotel, Toronto. Mr. T. Hilliard (Dominion Life), the retiring president, presiding. Others present were Messrs. J. K. Macdonald and W. C. Macdonald (Confederation Life), J. F. Junkin and P. C. H. Papps (Manufacturers Life), F. Sanderson (Canada Life), L. Goldman (North American Life), E. Marshall (Excelsior Life), D. Burke (Royal Victoria Life), A. McDougald (Pelican & British Empire), J. G. Richter (London Life), B. Hal. Brown (London & Lancashire Life), D. Dexter (Federal Life), J. Milne (Northern Life), and T. Bradshaw (Imperial Life). Letters expressing regret at being unable to attend were read from Mr. J. H. Brock, of the Great West Life, and Mr. D. M. McGoun, of the Standard Life.

T. G. BROUGH, General Manager.

The Molsons Bank.

100th DIVIDEND.

The Shareholders of The Molsons Bank are hereby notified that a dividend of FIVE PER CENT. upon the Capital Stock has been declared for the current half-year, and that the same will be payable at the Office of the Bank, in Montreal, and at the Branches, on and after the

Second Day of October next.

The Transfer Books will be closed from the 18th to the 30th September, both days inclusive.

THE ANNUAL GENERAL MEETING of the Shareholders of the Bank will be held at its banking house, in this city, on MONDAY, the 16th of OCTOBER next, at three o'clock in the afternoon.

By order of the Board,
JAMES ELLIOT,
Montreal, 29th August, 1905. General Manager.

The Bank of British North America.

INCORPORATED BY ROYAL CHARTER.

The Court of Directors hereby give notice that an interim Dividend free of Income Tax, for the half-year ended 30th June last, of thirty shillings per share, being at the rate of 6 per cent. per annum, will be paid on the 6th day of October next to the Proprietors of shares registered in the Colonies.

The dividend will be payable at the Rate of Exchange current on the 6th day of October, 1905, to be fixed by the Managers.

No transfers can be made between the 22nd instant and 6th prox., as the books must be closed during that period.

By Order of the Court.
A. G. WALLIS, Secretary.
No. 5 Gracechurch Street,
5th September, 1905. London, E. C.

The constitution was amended to admit of substitute representatives attending meetings in respect of those companies whose headquarters are outside of the Provinces of Ontario and Quebec.

The new officers elected for the year were as follows:—

President, Mr. David Burke.

First vice-president, Mr. J. F. Junkin.

Second vice-president, Mr. J. G. Richter.

Auditors, Messrs. E. W. Cox and John Milne.

Secretary-treasurer (Pro tem), T. Bradshaw.

Executive committee, the foregoing officers and in addition Mr. T. Hilliard, Mr. D. Dexter, Mr. L. Goldman and Mr. W. C. Macdonald.

* * *

OUR HALIFAX LETTER.

A great deal of dissatisfaction is being expressed here over the steamer service which the Allans are offering between Canada and Great Britain during the winter. We have heard a lot about the turbine ships "Victorian" and "Virginian" and got a fleeting glimpse of them when they made their maiden trips here last spring. They were apparently for show purposes only, as the schedule for the winter makes no mention of turbines. Worse than that, it provides that the work shall be done by third or fourth-rate ships such as the antiquated "Parisian," the "Sicilian," "Corinthian," and "Pretorian." We surely might have expected the "Tunisian" and "Bavarian" at least. Even they are not the ships to perform the service as it should be performed, but they are far better than the "Parisian." It seems to people down here absurd for the Government to be discussing fast lines, and while waiting for the fast line to come, to submit to having the mails carried by such notoriously slow boats as the "Sicilian," "Corinthian" and "Pretorian."

The fruit crop of Nova Scotia is turning out very much better than was expected, the long period of fine and dry weather having been of extraordinary value in ripening and maturing the later varieties. The crop of apples will be at least 75 per cent. of an average one, and the quality is fine. Prices have been better than for years and the year's yield will be a highly paying one. The better varieties have brought as high as three dollars at points of shipment. Large quantities are going forward to the English market and the export crop will probably amount to over 300,000 barrels, of which about 75,000 barrels have been shipped. The Gravensteins, owing to frost, were a poor crop, but Blenheims, Kings, and Ribstons are good. A great improvement is visible this year in the packing and grading of fruit. A considerable shipment of apples and pears was recently made from this port to South Africa.

The lumber trade is very dull in the Maritime Provinces, and at the present time not much wood is going forward to the market in the Old Country. The supply is much smaller than usual as an enormous quantity of logs is hung up on the New Brunswick rivers and will not be got out this year. Prices are very unsatisfactory and timber brokers here say that the people in Great Britain are under a misconception as to the true state of affairs. They are holding back from purchasing because they do not believe there is such a shortage here as really exists. At the present time, more satisfactory prices are to be obtained in the American market for such classes of stuff as that people take. Recent quotations from Liverpool for an ordinary cargo of spruce deals were seven pounds ten.

A new wholesale house has begun business in Halifax—Colwell Bros., Limited. They have had two retail furnishings stores here for a number of years and have succeeded well, and are reasonably sure of doing a good business in the larger way.

Exceedingly high prices are ruling for dried codfish. In St. Johns, Newfoundland, the price for prime merchantable paid to the fisherman has been as high as $6.80 per quintal, and this has served to keep the price up here, although I have not heard of it having gone above $6.50, and the larger part of the purchases have been made much below that. The buyers in St. Johns are cutting each others' throats, but the fisherman does not complain. There is undoubtedly a scarcity in the catch and dealers here say the Nova Scotia and Gaspe catch will not be more than one-third; but the price will be so high to the consumer that it will curtail consumption very greatly. There is a large quantity of Labrador fish yet to be marketed, and it is felt that the prices now prevailing must come down.

The dogfish reduction plant at Canso is doing good work. The price paid to fishermen is six dollars per ton, and a thousands tons a day could easily be secured. If the fertilizer made from the dogfish turns out as good as expected, the dogfish should soon be considerably depleted, as similar factories are to be erected at Clark's Harbor and Shippigan, New Brunswick.

The Minister of Marine and Fisheries, Mr. Prefontaine, has been paying a visit to Nova Scotia, giving particular attention to the wireless stations and the dogfish reduction plants. The station on Partridge Island is the last of the twelve which the Government contracted with Marconi to erect. It is said by Mr. Prefontaine to be the intention of the Government to have wireless stations erected along the survey line of the Transcontinental railway, to enable the parties to keep in touch. The station at Sable Island is working very satisfactorily, communication with the main station at Halifax and with other points being constantly maintained. The Sable Island station is taking from fifty to one hundred messages a day to and from passing ships.

Halifax, Nova Scotia, 23rd October.

* * *

BANKING AND FINANCIAL ITEMS.

Said a man, recently arrived from Ireland, "If I deposit my money in the savings bank when can I draw it out again?" "Sure," replied his friend, "an' if you put it in this day, you can draw it out again to-morrow by giving a fortnight's notice."

A permit has been taken out by the Standard Bank of Canada for alterations to be made, at an estimated cost of $20,000, to the stone head-offices of the bank on the corner of Jordan and Wellington Streets, Toronto.

Having to go to press a day earlier this week because of the Thanksgiving holiday we cannot give the figures from the Bank Clearing Houses for the week ended 26th. But we have no doubt they were large ones. The aggregate of the three previous weeks at the eleven Canadian clearing cities was: October 5—$76,419,582; October 12—$77,320,756; October 19—$73,866,977.

Mr. Lown has called at the office of The Monetary Times to explain that the Mr. Durand referred to in our item of last week, under this heading, as representing in Montreal the proposed Farmers Bank of Canada, was merely a person engaged to canvass for stock. That he exceeded his instructions when he put out a sign with "Provisional Offices" upon it, and that the provisional offices are at 118 King Street West, Toronto. He gives us the names of Mr. Fraser, the Provincial Architect; Mr. Watson, mayor of Listowel; Dr. Ferguson, of Toronto; and Mr. Gallagher, agent at Teeswater for the Sovereign Bank, as applicants for the charter, which have been extended. He adds that a fair proportion of stock has been subscribed for at par.

We learn something more about the projected United Empire Bank, whose headquarters are intended to be in Toronto. To avoid delay and to lessen preliminary work the charter of the Pacific Bank of Canada has been purchased and the name is to be changed by application to Parliament in due course. Mr. George P. Reid, late general manager of the Standard Bank of Canada, is to be the manager. He is a sensible, careful man, of good banking experience. The new project is capitalized at $5,000,000 and includes among its provisional directors M. McLaughlin, E. E. A. DuVernet, Rev. Provost Macklem, W. J. Smith; Samuel Barker, M.P., Hamilton; George A. Clare, M. P., Preston; Lord Ernest Hamilton; Evan H. Llewellyn, M.P., London, Eng. It is said that a large amount of capital has been offered in Eng-

The Traders Bank of Canada

Dividend No. 40.

Notice is hereby given that a Dividend of Three and One-half per Cent. upon the Capital Stock of this Bank has been declared for the current half-year, being at the rate of Seven per Cent. per annum, and the same will be paid at the Bank and its Branches, on and after

Friday, the First Day of December next.

The Transfer Books will be closed from the 16th to the 30th of November next, both days inclusive.

By order of the Board,
H. S. STRATHY,
General Manager.

The Traders Bank of Canada.
Toronto, 13th October, 1905.

land by London financiers, who believe in the capacity of the manager and who believe in the great future of Canada.

It is announced by Mr. W. E. Stavert, liquidator of the Bank of Yarmouth, that a dividend of 75 per cent. on the claims which he has allowed will be paid at once. The court has already approved of his report upon the claims that ought to be paid. This is good progress, for the bank suspended only in March, the shareholders and creditors held meetings in May, on the 19th of which month the winding-up order was made. On the 4th of July the list of contributors was settled, and the order for the call for double liability was passed 8th of August, the date of payment being fixed for 9th of October. Already, we are told, about $150,000 has been paid in by the shareholders in response to that call. Shareholders had to their credit on deposit about $110,000, of which amount about $40,000 will be credited to the payment of double liability, so that practically $190,000 is made available to the liquidator, with which he is enabled now to pay 75 per cent. of the indebtedness of the bank.

* * *

—The Ontario Bureau of Mines is in receipt of enquiry from Joh. Otten & Zoon, Rotterdam, Holland, for supplies of iron, copper and nickel ore, which they are prepared to purchase for export to Europe. They especially desire iron high in phosphorus, and good nickel ore. The bureau has also received enquiries from the Antwerp Trading Company, Antwerp, Belgium, for silver-cobalt and copper ores.

* * *

—A Detroit despatch says that in order to save many Michigan beet sugar factories from being shut down because of a scarcity of material, a protest against the present sugar beet tariff has been made before the United States general appraiser there by the Marine Sugar Company, of Marine City, Mich., who ask for a reduction of the tariff from its present rate of 25 per cent. ad valorem to 10 per cent. ad valorem. The appraisers are asked to lower the duty in order that the American factories may get beets from Canada. It is worth noting that the technical ground on which this protest is made declares that sugar beet is not in reality a vegetable, but merely a raw material for use in manufacturing sugar.

* * *

—The director of the United States mint has prepared a statement showing the world's production of gold and silver for 1904. The gold output he estimates at $347,150,700 and that of silver at $97,726,200. Of this the United States produced last year:—Gold value, $80,723,200; silver in fine ounces, $57,786,100; silver in commercial value, $33,516,000. Canada, under same headings—$16,400,000, $3,718,668, $2,156,800. Great Britain—$102,400, $174,517, $101,200. Africa—$85,913,900, $486,408, $282,100. These figures show an increase of about $22,000,000 in gold over the bureau's estimate for 1903. The United States shows a gain of about $7,000,000 and South Africa of $18,000,000. The director says that both of these countries are still upon a rising scale of production. The world's output in 1905 is expected to exceed that of 1904 by $25,000,000, with another gain probable next year.

* * *

—An important customs duty case in connection with wood pulp from Canada has just been decided in the New York courts. A test case had been brought by the United States Customs Department against C. W. Pierce, representing one of the largest pulp importing concerns in the country. This gentlemen received a shipment of rossed wood pulp from Canada and was taxed 20 per cent. by the New York assessors. He disputed the legality of the same, and placed the matter before the Board of General Appraisers at New York. This board supported Mr. Pierce's contention that the material was not taxable, but placed the matter before the United States District Court for final decision. The appraisers' views are now upheld in a decision which means that full restoration of duty paid must be made, not only to Mr. Pierce, but to all other importers of wood pulp who have been assessed since the suit was instituted. The amount of money involved is large.

* * *

—A report just issued by the United States Bureau of Labor makes some striking comparisons in regard to the cotton manufacturing industries. For the purposes of his work, the statistician has selected 26 representative establishments, both north and south, and having been allowed pretty free access, two things, he thinks are shown clearly: (1) That in wages and hours the condition of the northern operative has improved consistently, almost every year since 1890 clear up to 1903, the latest date he covers in his report, but that (2) this fortunate result has not occurred to anywhere near so great an extent for southern operatives and that, therefore, on the face of things, the disadvantage in labor cost under which the northern manufacturer labors grows more serious instead of less. It has been well-known, of course, that Massachusetts cotton mills run several hours less per week, fifty-eight compared with sixty-six as a matter of fact, than those in the South. Labor leaders, who have caused the enactment of laws requiring shorter hours, have always insisted that Massachusetts could make this up by greater skill of her operatives. The truth is, however, that the machines are no better in the Massachusetts mills than those at the South and since the machine nowadays rather than the skill of the operative determines the product, it is a difficult task for mills in the North to gain eight hours of product on the Southern mills in a single week.

The FIVE per cent. Debentures issued by this Company afford the following advantages:

- The investment can be converted into cash at any time after two years by giving sixty days' notice.
- The issue of Debentures is limited to an amount not exceeding 75 per cent. of the Paid-up Capital of the Company.
- The total amount of Debentures to be issued will not exceed 20 per cent. of the value of properties under Mortgage to the Company.
- The Debentures issued by the Company will be a first charge upon the assets.

Mercantile Summary

The Dominion Bridge Company, at Lachine, Que., proposes to erect a branch plant in Winnipeg.

One day last week the Allan Steamship "Bavarian" landed at London docks 28,000 barrels of apples, the largest number ever shipped at one time from Montreal.

The whaling schooner "Era" arrived in New Bedford, Mass., a day or two ago laden with 7,500 pounds of whalebone, obtained in a stay of two seasons in Hudson's Bay.

Extensive marble deposits have been discovered in Orford Township, Quebec. The stone is reddish brown in color with white specks. Two carloads have been sent to Montreal.

Some of the railways are seeing more and more the impropriety of placing wooden freight cars between locomotives and the large heavy steel cars which are increasing in number every year. It is impossible to prevent the use of "mixed" trains, composed of these two kinds of cars, and as the use of the steel cars increases the difficulty increases. One trunk line in the United States has found to its cost that the mere concussion of the train at a sudden stop acts disastrously upon the weaker units, and now forbids its employees to put the latter between the heavy cars. It probably means an early retirement for the old-fashioned wooden freight cars.

The shareholders of the Ogilvie Flour Mills Company, Limited, held their fourth annual meeting on the 12th inst., at which satisfactory results were submitted. The profits for the year ending August 31st last amounted to $472,230. The following directors and officers were elected for the ensuing year: C. R. Hosmer, president; F. W. Thompson, vice-president; Sir Geo. Drummond, Sir H. Montagu Allan, E. S. Clouston, H. S. Holt, and Sen. G. T. Fulford, directors; Geo. Creak, auditor; Shirley Ogilvie, secretary; S. A. McMurtry, treasurer; W. A. Black, western manager; F. H. Anson, general superintendent; Thos. Williamson, assistant to the president; Col. A. E. Labelle, local manager.

The British Board of Trade returns just issued show an interesting comparison between the progress of British and foreign shipping during the last sixty years, or say from 1840 down. In 1840 the total of British ships was 6,490,486 tons, while the rest of the world combined had only 2,949,182 tons. In 1870 these figures had gone up to 25,072,180 tons and 11,568,002 tons respectively. In 1900 British ships were 62,710,000 tons and the foreign were 35,872,000 tons, and in 1904 the British were 69,654,000 tons and the foreign 38,735,000 tons. The percentage of British to the total tonnage in 1840 was 68 per cent., and in 1904 it was 64 per cent. It has maintained its supremacy, therefore, very steadily during the entire period.

Mercantile Summary.

The sewers committee of Hamilton city council has decided to submit a by-law to ratepayers next January to provide $22,000 for overflow sewers to prevent flooding.

The Kingston Locomotive Works have begun delivery of the fifteen large freight engines which they have been building for the Grand Trunk. These are compound engines of 200 pounds pressure and each will weigh 150 tons and cost $18,000. The Grand Trunk intends to use them on its middle division.

A London cable of Saturday says that the cigar manufacturers of London are opposed to the proposition to further protect the Canadian leaf, looking to its use in cigars. A petition is going the round of the factories there opposing any plan looking to the increasing of present duties, with a view to ensure the use of Canadian-grown tobacco in London-made cigars.

Announcement is made in New York that Charles Steel, Samuel Spencer, George F. Baker and F. D. Underwood, of New York, and R. R. Rhodes, of Cleveland, have become directors of the Cincinnati, Hamilton & Dayton Railroad Company. Mr. Underwood, who is president of the Erie Railroad, was elected president of the Cincinnati, Hamilton & Dayton.

A news item of 9th inst. says that development work is to be started shortly on the Silver King group of claims in the Windy Arm mining district of British Columbia. In this same section we hear there was a sale of the Dale property recently to T. M. Daulton, of Seattle, Wash., who will do a good deal of work on the claims. The price paid is said to have been $100,000.

It illustrates the mixed character of Canada's most remarkable city, Winnipeg, that a deputation of the School Board visited a school in the northern part of that city last Friday, and in one class room found English, German, Galician, Italian, Hebrew, Icelanders, Swedish and Danish pupils studying together. This shows a cosmopolitan population being welded into a Canadian nationality by the national school system of Manitoba.

Mr. J. P. Scriver, fruit inspector, writes to the Huntingdon Gleaner: "I have found out that some unscrupulous commission men in Montreal are trying to use the Fruit Marks Act for their own benefit. They notify some farmer or dealer, from whom they have bought apples, that their apples have been condemned by the inspector, and cut them in the price. Now the inspectors are bound by law to notify by letter or telegram immediately the owner or packer of any apples which they find wrongly packed, so that unless the packer receives notice from an inspector that his apples have been condemned he need not believe any report otherwise."

A Change in the Trusteeship.

Whether of a Will, Marriage Settlement or Bond Issue, is a troublesome and expensive matter.

Where private trustees are appointed such changes are inevitable.

The Trusts Company alone enjoys continuity of tenure, fixity of residence and permanent records.

Mercantile Summary.

The stamp mill at the Big Master Mine at Kenora, Ont., we hear, yielded, in a run of twenty-three days, 140 oz. of gold.

The opera house at Neepawa, Man., which had only recently been rebuilt after destruction by a fire last January, collapsed last Saturday, entailing a loss of $5,000.

A by-law will shortly be submitted in Galt, Ont., to raise $12,000 in aid of the St. George Wagon Works Company, who propose to locate there.

The Brompton Pulp and Paper Company at Sherbrooke, Que., have closed their pulp mills, owing, it is said, to lack of demand. Some hundred and thirty men are thrown out of employment.

A despatch from Montreal states that Mr. F. P. Jones, formerly of Brockville, and recently in the sales department of the Dominion Iron and Steel Company, has been appointed general manager of that company, taking the place of Mr. Graham Fraser, who recently resigned.

The Dominion Bridge Company, in view of the great volume of western business and the extensive railway construction that is sure to take place on Lake Superior before long, have decided to establish a plant and yards in Winnipeg or vicinity. The proposed western plant will not be a duplicate of the extensive works at Lachine, but will be begun upon a small scale and extended as the requirements demand it.

Canadians think it is a big thing when one of their largest railways proposes to spend eight millions of dollars on rolling stock in one year. And so they very well may. But here is a United States railway, the Pennsylvania, going to spend, it is said, $26,000,000 next year for cars and locomotives west of Pittsburgh. Over 500 locomotives are to be built for next year's delivery.

A telegram from Glace Bay, Cape Breton, dated 18th inst., stated that six hundred men employed on the Dominion Coal Company's colliery No. 3 had stopped work as a result of a dispute respecting the explosive to be used. The company lately substituted "bobbinite" for loose black powder, but the men claim that, while it is highly inflammable, it is higher in price than the old explosive and that thus their earnings are reduced, contrary to the agreement.

The Railway Commission has directed all the railway companies in the Canadian Freight Association to establish commodity (or special) rates on metallic shingles in carloads, equal to the rates at which metallic shingles in carloads were carried before the change in classification in March, metallic siding, mixed carloads of the two articles to be carried in all cases at the same rates as charged on straight carloads.

Mercantile Summary.

J. P. Abel's box factory at St. Louis (Montreal) was damaged by fire last week to the extent of about $3,000.

The Mercier bridge over the Metapedia river near the New Brunswick boundary was formally opened on the 17th inst. Its length is 800 feet and the cost $35,000.

P. J. McDermott's blacksmith shop at Minnedosa, Man., and several other buildings near by, were a few days ago damaged by fire, the total loss being about $6000, only partially insured.

The Dominion Government Public Works Department has awarded the contract for building a new immigration building in Halifax to Samuel Marshall, of that city. The price is stated at a little over $51,000.

The B. C. Dredging Company's mammoth dredge has been making a test run at Blue Canyon, Spruce Creek, in the Atlin district, which is reported to be proving highly satisfactory. Next season operations are to be inaugurated on an extensive scale.

The Department of Trade and Commerce has been notified by the Australian Government that inland freight is added to the value for duty purposes only in the case of goods subject to an ad valorem duty. Goods entering at specific duties are exempt from the regulation. Last year less than one-half the Canadian imports into Australia were subject to an ad valorem duty. It is argued, therefore, that the new Australian customs regulation will not affect Canada very seriously.

Last Friday's gale on the Great Lakes was one of the most destructive recorded for a long time. Several vessels on Lake Ontario had a very hard time of it, though so far we have seen no reports of actual damage done. According to a list, however, in the daily newspapers, on Lake Erie no less than seven schooners and other vessels foundered, with the loss between them of ten lives; on Lake Huron nine vessels fell victims to the fury of the storm with a loss of eleven seamen, including the Canadian schooner "Minnedosa," which sank with her captain and his wife and seven of a crew. The losses on Lake Michigan numbered six vessels with two men, while on Lake Superior there were seven vessels. The list is likely to be added to considerably, as the wind is supposed to have reached a velocity of sometimes seventy-five miles an hour.

It is not only in Canada that complaints are being made as to shortage of equipment and difficulty of obtaining cars. Similar conditions are reported from many parts of the neighboring republic. According to a dispatch received in New York, all railroads operating eastbound from Chicago and St. Louis report further traffic congestions and car blockades. The problem of moving freight when the cold weather sets in is causing more anxiety among

transportation officials than ever before at this season. There is said to be not a road which is not short anywhere from 10 to 35 per cent. of the cars and power necessary to fill the orders from shippers, and if such conditions exist now with ideal weather prevailing, it can readily be seen what hardships will come when storms and cold weather must be dealt with. Officials express themselves as finding no relief in sight and have set their office forces to work on plans which are hoped to at least modify the inevitable—the winter car blockades.

⁂

THE LAKE MARINE.

Thirty years is not a long time in the history of a country's commerce, but the strides made within that period in the character of the floating craft on the Great Lakes of North America is startling indeed. We find in the Cleveland, Ohio, "Plaindealer" a comparison of conditions in 1876 and to-day that cannot but be found interesting. Says that journal:

The announcement that the Pittsburgh Steamship Co. has given an order for two new steamers to come out next spring outclassing everything yet seen on the Great Lakes, is an effective answer to the predictions that with the building of the "big four" of that fleet last winter the maximum had been reached. The two new boats are to be thirty-one feet longer, two feet wider and one foot deeper than the biggest boat that had previously floated on the lakes. It would hardly be safe to say that even with these the end is reached, although there are but two receiving ports, Conneaut, on Lake Erie, and South Chicago, on Lake Michigan, where they can be safely handled. The new steamers are to be 600 feet over all, or 580 feet keel measurement and 58 feet beam.

The extraordinary development of the lake vessel can best be understood by comparing the maximum figures of keel and beam measurements at decennial periods. The "big boat" of 1866 was [of wood] 213 feet keel and 33 feet wide. In 1876 the monster steamer was the "Commodore" built in 1875, which measured 265 feet keel and 42 feet beam. During the next decade there was a decided increase both in the number and size of the "big fellows" and in 1886 the maximum of the decade was reached with the "Susquehanna," which measured 302 feet keel and 40 feet beam. In the next decade marine builders became bolder. There was a steady increase until in 1896 all previous records in shipbuilding on the Great Lakes were broken by the [steel] fleet brought out that year for the Bessemer Steamship Co., ranging in length of keel from 365 to 424 feet and in breath from 45 to 48 feet. During the decade which is now closing the size of the new boats increased steadily until the end was supposed to have been reached with the four that came out this year, measuring 549 feet keel and 56 feet beam. The two steamers ordered for next spring's delivery will be each 31 feet longer, keel measurement, than the record boats of this year's launching. The maximum length has increased 100 feet in the last five years and 156 feet in ten years.

A comparison of the American mercantile marine of the Great Lakes with the American mercantile marine of the ocean coasts and great rivers reveals some surprising and instructive facts. Ten years ago the American registry for the ocean coasts and the rivers showed no steamer of the size of any of the Bessemer fleet launched on the lakes in 1896. Since then a number of larger steamers have been built for the lines crossing the Atlantic and Pacific oceans, but the lists made up to May of the present year show a remarkable discrepancy between the fleets flying the American flag on the Great Lakes and on salt water. At that date there were on the Great Lakes 124 American steamers with keel measurement from 400 feet upward, and but 26 of that class flying the same flag on salt water or on the great rivers. Of the class from 400 to 450 feet keel measurement there were 81 on the Great Lakes and

Vancouver Debentures

Tenders marked "Tenders for Debentures" will be received by the undersigned up to Friday, 24th November, 1905, at 4 p.m., for the purchase of $500,000.00 Debentures of the City of Vancouver. These debentures will bear interest at 4 per cent. per annum, payable half yearly. Principal repayable as follows:—

As to $46,500 at the expiration of 12 years
" $25.000 " " 15 "
" $157,500 " " 20 "
" $17,500 " " 30 "
" $253,500 " " 40 "

The highest or any tender not necessarily accepted.

Tenders will be received for the whole or any part of the different issues.

For further particulars address,

A. McEVOY, City Clerk,
Vancouver, B.C.

Vancouver, B.C., 6th Oct., 1905.

but 9 elsewhere. Between 450 feet and 500 feet there were 26 on the lakes and 5 on the oceans and rivers. From 500 feet upward there were 17 on the lakes and 12 on the oceans and rivers. Of those above 500 feet keel measurement there were but eight on salt water, flying the American flag, larger than the largest of those on the Great Lakes, and two of these are not as large as the two to be built this winter for the Pittsburgh Steamship Co. These eight are the Pacific Mail steamers "Korea" and "Siberia," each 551 feet keel and 63 feet beam, built in 1902, and the "Manchuria" and "Mongolia" of the same line, each 600 feet keel and 65 feet beam, built in 1903 and 1904; the Red Star Line steamers "Kroonland" and "Finland," 560 feet keel and 60 feet beam each, built in 1902; the Great Northern Railroad steel steamers for the Pacific coast "Minnesota," 627 feet keel and 73 feet beam, built in 1904, and "Dakota," 672 feet keel and 73 feet beam, built in 1905. "These statistics may open the eyes of those of our friends in the East who seem to have no idea of the relative proportions of the mercantile marine of the great inland fresh water seas and that of the ocean coasts under the same flag."

For the information of our readers on the other side of the Atlantic it may be explained that the remarkable growth of the freighting fleet on the lakes arose largely from the discovery and development of the copper and iron mines of Lake Superior. These steamers carry largely coal and merchandise westward, bringing back copper and iron ore. Canadian steamers, which are steadily growing more numerous, are not included in the generalizations of American waters on this subject, as a rule.

* * *

TORONTO MARKETS.

Toronto, October 19th, 1905.

Chemicals, Drugs, Etc.—Opium is dull, though prices seem to keep unchanged. Quinine also is unsettled, without much active demand, though perhaps some improvement is discernible. Menthol is firm. Peppermint oil is the same. Advices from Baltimore say there is a firm tone to the market. The English market, too, is firm, especially for export requirements. The home trade is a little on the dull side.

Dry Goods.—While there is no special feature in the dry goods trade, business is satisfactorily active. Prices are quite steady for practically all lines. Cotton staples are firmly held, and woolens even more so. The demand for heavy woolens has hardly begun in earnest yet, the weather having been rather mild for the season, but there is no complaint on this score, it being recognized that with the coming of severe weather, the trading community is sufficiently hopeful to bring this branch of the trade into full activity just as soon as needed. Travellers report good prospects in the country.

Flour and Grain.—Fine weather has been the cause of light deliveries of grain farmers feeling it incumbent on themselves to do as much as possible on their farms before the advent of winter. There is a good export demand for Ontario wheat. Manitoba wheat is moving east in very large quantities, very much larger than was the case a year ago. Oats, rye and barley are all very firm. No Canadian corn has yet come into the market. Buckwheat is firmer. Peas are nominal. In flour, ninety per cent. patents sell at $3 in buyers bags. Manitoba flour is a little unsettled at the moment. Bran is rather scarce and shorts are firm. In oatmeal no change is reported. Flour is in better demand, and there has been a stiffening in prices.

Fruits and Vegetables.—The quantities of domestic fruit on the market are daily becoming more attenuated and prices keep up. Lemons remain a little easier than they were. Foreign fruits keep at steady prices. Our quotations are as follows:

Peaches, 30 to 75; pears, 35 to 50; apples, barrel, 2.25 to 2.50; grapes, Concord, 20 to 35; grapes, Niagara, 18 to 35; Tokay grapes, 2.25 to 2.50; Cantaloupes, bkt. 20 to 25; cantaloupes, case, 65 to 80; bananas, bunch, 1.75 to 2.00; lemons, box, 4.50 to 5.00; oranges, Jamaica, barrel, 4.50 to 5.00; cranberries, barrel, $10. Vegetables — Tomatoes, basket, 22 to 30; celery, dozen, 35 to 40; sweet potatoes, 2.75 to 3.00; onions, 25; onions, case, 2.50; peppers, large, 15 to 20.

Groceries.—There was a decline in the price of all grades of refined granulated sugars on Monday last. For some time past the weakness of the New York market has been marked. Canned goods have a firm tone, and there is a steady normal demand. Teas are strong, though the business being transacted is rather of a hand-to-mouth character. Trade in general lines is quite active and payments have been satisfactory.

Hides and Leather.—Lambskins are firm at last week's advance, and hides are still very firmly held at old quotations. In tallow there is no change. In some lines of leather there is said to be a scarcity. Values are quite strong.

Live Stock.—Few export cattle were offered at the last market and trade was quiet. The quality of many of the butchers' offered was poor, and demand was somewhat slow, though everything was cleared out during the day. Stocker and feeders of good class are in demand, but not over plentiful. There is a good enquiry for choice cows. Sheep and lambs have been in heavy demand and in spite of heavy arrivals, the market had a firmer tone.

Provisions.—Prices for butter are steady, with fairly large receipts, but the tone of the market is not strong. Not so much activity is to be noted in cheese, though prices continue as before. Eggs are in fair demand, with pretty good supplies, and they are becoming firmer in price. Not much demand is noted for poultry and prices are easy. Potatoes are firm, owing to poor quality of part of the Ontario crop.

Wool.—There is practically nothing worth mentioning transpiring in regard to this article. Prices keep steady at old quotations.

In Planning Your Fall Expenditure

do not forget that the surest way to protect the profits of a good year is by investing a fair proportion of the surplus in Life Insurance.

It is about the only investment always worth its face value. The Great-West Life offers such Insurance on unusually attractive terms.

MONTREAL MARKETS.

Montreal, October 24th, 1905.

Ashes.—There has been a more active enquiry of late, with the result that values are firmer at from $5.40 to $5.50 for first quality of pots, and receipts have been a little more liberal; second pots are quoted at $4.80 to $4.90. A few barrels of pearls have come lately to hand, realizing about $7.50 per cental on an average, it is said.

Boots and Shoes.—Orders have come in well, and the volume must be a good one. No cutting of prices seems to trouble the trade just now, on the contrary, dealers are holding firm. There is, however, no great amount of cutting being done on spring footwear as yet.

Dairy Products.—Shipments of cheese last week were 89,175 boxes, figures which are some 5,000 boxes ahead of the returns for the previous week. The total shipments for the season to date are 1,819,890 boxes, as compared with 1,791,436 boxes at this date in 1904, and 2,132,693 boxes in 1903. Since last writing the market has assumed a quieter and weaker tone, with the outside figure for fine Westerns about 11⅜c., and with fine Quebecs, quoted at from 10¾ to 11c. In butter there has also been some decline, with a comparatively slow demand at the moment, choice to fancy creamery being quoted at 22¼ to 22½c; good to fine, 21 to 22c. Exports last week aggregated 9,851 packages.

Dry Goods.—Sorting business continues to be rather on the slow side, the weather being too fine to suit the taste of most retailers, but general collections are very fairly maintained. European letters all speak of the great firmness prevailing in all lines of woolens, further advance being deemed probable. Several large local manufacturers of shirts, blouses, etc., have advised wholesalers not to oversell spring lines, as prices are likely to advance at any moment. Under date of October 21st the Canadian Colored Cotton Company gives notice of an advance from 2½ to 5% in denims and the better lines of tickings.

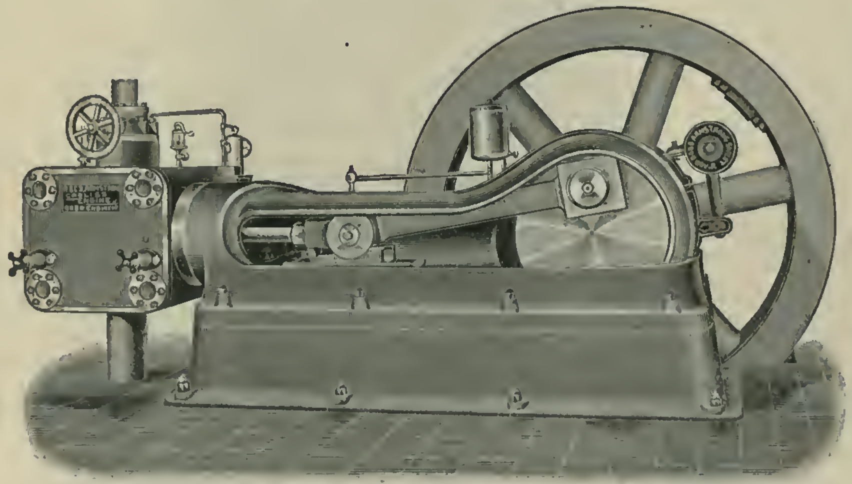
Groceries.—The movement continues quite a brisk one, and will likely so continue until the close of navigation, say a month hence. In sugars there is further decline, both local factories having reduced quotations on Saturday last at 10c. a cental, making standard granulated $4.50 in barrels, with yellows now ranging from $4 upwards. The demand at the moment is good. Barbadoes molasses is quoted at 35c the single puncheon, round lots being quoted at about 32c. Reports of the probable amalgamation of three of the starch manufacturing companies tend to create some expectation of firmer quotations in the near future. Primary markets for Valencia raisins continue weak, and jobbers do not stand to make much profit on these goods this season. Sultanas are firmer by from 1 to 2c. Currants are steady; the Bank of Athens syndicate is in full operation, and prices are established. Very few orders are being placed for California raisins owing to the high price. Some fair commands have been placed, it is said, for Malaga seeded raisins. Tarragona almonds are up 1s. 6d. a bag.

Hides.—The local hide market is reported very steady at 11½ to 12c for No. 1, dealers charging the usual advance to tanners. Outside markets are reported as showing much strength. In calfskins there is nothing doing at this season. Lambskins are quoted at 90c each.

Leather—The demand is still of quite a moderate character, but it is claimed by tanners that if boot and shoe manufacturers defer their buying much longer they will find that they will have to face still further advances in prices. Advices from all outside hide markets show a very strong situation, it being claimed that dry hides have advanced from 1½ to 2c. within the last six weeks, and that all other lines show much strength. Some western makers of the best grades of splits have advanced quotations 3c to 4c, bringing prices up to from 24c to 26c.

Metals and Hardware.—Wholesalers of hardware and all lines of metal goods report excellent business, the expectation of advance in various lines probably helping to stimulate the demand, though the actual consumption of all building material is large. Pig iron is firm on the basis of $19.25 for No. 1 Summerlee, and $19.00 for domestic brands. Bar

A FINE STEAM PLANT.



"I will say without qualification that it is as fine a boiler and engine plant as I have ever had the pleasure of seeing for its size. The engine was working without heating, and absolutely without any noise. I wish to congratulate you on your success in building this class of engine, and hope that we may have pleasure in dealing with you again."

The above refers to a 350 horse power Robb-Armstrong Corliss engine and two 175 horse power Robb-Mumford boilers installed by us.

iron is again firmer at $1.85 in an ordinary way. A meeting of the larger importers and dealers was to have been held last week to consider the revision of prices of plates, sheets, etc., but was postponed until this week. Galvanized sheets are actually firmer at the moment at $4.25 for 28 gauge, standard widths, and several dealers are quoting $2.20 for boiler plate. General metals are all firm; ingot tin at 36½ to 37c.; copper, 17¾c.; spelter, 6¾ to 7c.; sheet zinc, by the cask, 7¼ to 7½c.; lead, $3.80 to $3.85.

Oils and Paints.—The only noteworthy change is a further advance in turpentine, which is now quoted at 98c. per gallon by the barrel, and $1.05 for 5 gallon lots. Linseed oil continues to rule weak, and while 46 to 47c. is the nominal quotation for boiled, business is reported at lower figures. The scarcity in window glass is unrelieved, many orders being unfilled, and quotations are firmly held at $3.75 to $4.00 per 100 feet for first break.

City of Kingston
DEBENTURES

Sealed Tenders will be received by the undersigned up to 3 o'clock p.m. on **Friday, November 3rd, 1905**, for the purchase of the whole or any portion of the following debentures, bearing interest at the rate of 4% per annum, payable semi-annually.

$20,000 Light Debentures, payable by annual instalments within thirty years from 1st May, 1905.

$2,000 High School Debentures, payable by annual instalments within fifteen years from 1st July, 1905.

The highest or any tender not necessarily accepted. For further particulars apply to

F. C. IRELAND,
City Treasurer.

Thomas Kickham & Co., general dealers, of Souris, P. E. I., who were reported as obtaining extension indulgence last spring, are now trying to effect a compromise arrangement at 70 cents on the dollar.

The Dominion Engineering and Construction Company, Limited, with a total capital stock of $100,000, head office at Montreal, has been granted a Dominion charter. It is to carry on the business of electrical, mechanical and civil engineers and contractors, develop water powers, take over contracts, etc.

Capitalists in London, Sarnia, Chatham and Windsor are said to be talking over a scheme for building an electric line from Sarnia to London. The route would probably parallel the northern division of the Grand Trunk to London by way of Forest and Parkhill.

The Municipal Trenching Company, Limited, Montreal, capital $1,000,000, has been granted by the Dominion government a charter authorizing it to undertake the work of excavating, trenching, dredging, etc., and manufacturing, operating or leasing all kinds of machinery in connection with the same. F. C. Austin, of Chicago, and J. W. Harris, of Montreal, are among the charter members.

ECONOMY IN WOOD WASTE.

Here is something which may well attract the attention of Canadian sawmill men and others in that trade, since we have a lot to learn about economies in the disposition of products of our forests. The Chicago Tribune heads the item, "Money in Waste Hardwood."

All the world's woodcutters might be millionaires if they knew how to gather up the twelve baskets of industrial crumbs as does a distilling plant in a Michigan town. This establishment has a capacity of ninety cords of hardwood a day, the wood consumed being slabs, crooked logs, treetops and other hardwood offal from logging operations.

From one cord of this material there is made ten gallons of wood alcohol, 98½ per cent. being pure; 200 pounds of acetate of lime, quicklime being added for this purpose, and fifty bushels of charcoal. Every product of the wood except the charcoal passes off in the form of gas, and is reduced by distillation. Some irreducible gas and a little tar product are used as fuel. Nothing is lost.

The alcohol is worth 60 cents a gallon. The acetate of lime is worth two cents a pound, and the charcoal is worth ten cents a bushel. The value of the lime used is worth not over one-fourth of the value of the acetate. The value of the final product of the cord of refuse wood is thus not far from $14. The process is not expensive. The plant we

⁂

A NAIVE DESCRIPTION.

In last week's issue of the new Montreal illustrated paper, The Standard, is an capable appreciation of Dr. Barclay, and a capital interview with Mr. McNicoll, of the C.P.R., a man who has risen step by step until he is now vice-president of that powerful road. There is also the story on the front page of Canadian millionaires gathered in a noble apartment round a great table, which is an exalted mode of describing the last annual meeting of the C. P. R. But the story is well told, albeit we cannot imagine the "flushed and self-conscious looks" ascribed to the faces of two such eminently self-possessed persons as the chairman and the president. Also the sketch of Mr. Skinner is good; while the contrast between Mr. Osler and "Charlie" Hosmer seems excellent, for the latter is a radiant and irrepressible jollier, as even the serious directors of the Merchants Bank have found. The momentary cessation at that gathering of the long-cultivated gravity of Mr. Angus is an event thought worthy of special mention. The self-effacement of that dignified and handsome gentleman, in so far as regards appearance in the public prints, is one of the marvels of Montreal. What a pity there is no adequate photograph of the group. But we must not keep our readers from the story. The Modern Miltonian introduction, the plush hangings and the pictures are omitted, and we look, as spectators might, squarely at the dozen of strong men at the round table.

"Sir William Van Horne is in the chair. On his right sits the president, Sir Thomas Shaughnessy. On his left, the first vice-president, Mr. D. McNicoll. About the table are Mr. E. B. Osler, M. P., Mr. R. B. Angus, Mr C. R. Hosmer, Sir Sanford Fleming, Sir George Drummond, the Hon. Robert Mackay, Mr. Thomas Skinner, M. P., (England), and Mr. W. D. Matthews.

"There is a certain tenseness in the atmosphere, which affects even such calm persons as Sir William Van Horne and Sir Thomas Shaughnessy, who are both a little flushed and self-conscious looking. All the directors look as if they had stepped out of band-boxes, so immaculate is their toilet.

"Sir Thomas rises to make his brief annual statement. This has been carefully written out. He mentioned, quite casually, as it would seem, and certainly without a tremor, that the company had reached the mark of a million a week! * * * And when Sir Thomas came to the needs of the company, to keep pace with the growing time, the ease with which he said it was the intention to spend eight million dollars upon rolling stock almost reached the sublime. Then Sir Thomas sat down, and smiled sweetly upon the shareholders, as who should say, 'What do you think of that for a showing?'

"The smile, indeed, circulated. Mr. Angus is, usually, very grave; but even Mr. Angus smiled. One would not expect Mr. Osler to smile at anything. It would be flying in the teeth of temperament. He may smile, indeed, in the bosom of his family, or after dinner, when the wine and the cigars are all right; but he is an exceedingly solemn person.

"As for Mr. Charles R. Hosmer—'Charley,' as he is affectionately called by his intimates, though now, perhaps, one must remember the millionaire and great person, rather than the manager of C.P.R. telegraphs, who loved to 'jolly' the boys along—he laughed in his glee. He even laughed openly at John Morrison, who was afraid that the report was too optimistic. Mr. Matthews was in good humor; while Sir George Drummond wore a benignant expression. Mr. Skinner was in great good humor. He had just returned from a visit to the North-West, and had seen wonderful things. He is a fine type of the perfect English gentleman. He is as different from the man with the loud 'checks,' who affects an air of superiority, as day is different from night.

"Mr. Skinner wears the 'crease' in his trousers as narrow and as fine as the point of a razor; also the 'spats,' which Londoners all affect—and a dangling eye-glass. Once more, he has the accent of culture. * * * There were millions in the company—many millions, it is safe to say.

"And afterwards doubtless they all adjourned to the club."

Lowest Expense Ratio

The Government Blue Book, just published, shows that

The Mutual Life Assurance Co. OF CANADA.

had for 1904 the **Lowest Expense Rate** of any Canadian Life Company, the ratio of "general expenses" to "income" being only **per cent.,** while the **average** of all the Canadian Life Companies for that year (as given by The Globe of 19th inst. is **25.47 per cent.**

Accidents vs. Fires

It is said that 20,000,000 Accidents and Illnesses occur each year, but only 80,000 fires.

A business man protects his property against the loss that rarely happens—fire. He can replace his property, but he can never replace his time or his damaged arm.

The most liberal accident and sickness policies are issued by

The Employers' Liability Assurance Company,
Temple Building, - Toronto.

The Sun Life of Canada had a triumphant year. Impossible to give the increases in this space—suffice it to say that never has the Company's motto "Prosperous and Progressive" been so magnificently maintained. Ask for leaflet giving the Record of 1904.

TRADE UNION LAW.

Looking back over the past century of trade unionism, we find that such unions have been attacked in two different ways in the attempt of capital to keep them within proper bounds, and this has given us two lines of precedents in England, both of which are interesting.

In the first place, when labor is dissatisfied, the working-men endeavor to compel capital to accede to their terms by declaring a strike, and even a boycott, or, further, sometimes by using force and picketting, to prevent non-union men from working. This procedure has given rise to one set of cases in which an attempt as above was made to define to what limits unions may lawfully go in trying, as against their employers, to accomplish their ends, And, although the legal decisions are indefinite, and it is hard to deduce general principles therefrom, it would seem that organized labor is perfectly justified in using argument or any other peaceable means to prevent non-union men from working, but they may not obstruct or beset an employer's place of business, or by threats or intimidation try to prevent the non-union men from working.

In the course of time, however, the clever leaders of organized labor thought out a much more effective way of bringing pressure to bear on capital. In a nut-shell, this consisted in inducing any third party to desist from buying the employers' goods under penalty of boycotting his business; and as the retailer is usually in business in a small way, this was generally a comparatively easy thing to do. The unions pursued this line of attack even further, and in some cases disseminated literature libelling the employer, as was done here in Toronto recently in the case of the Gurney Foundry Company. This in reality amounts to a third party inducing one of the parties to a contract to break it, and the law on this particular branch of contracts dates away back early in the history of English jurisprudence. One of the first cases on this subject was the case of Lumley vs. Gye, where a manager of an opera house had engaged a singer under contract, and the manager of a rival house induced the singer to break her contract and engage with him. It was held in this case that a third party interfering in a contract of this kind was liable for any damages that might be caused by its breach.

Although trade union cases have been up to the present time rare in Canada, this very point was decided a short time ago in the case of the Gurney Foundry Company against their striking workingmen, and the union was mulcted in damages for inducing parties to break their contracts to purchase the Gurney Co.'s goods. We may consider this point now absolutely settled in Canadian law, and well it is that it should be.

It is gratifying to know in the hard-fought case of the Metallic Roofing Company against the Local Sheet Metal Workers' Union and the International Union, a parent body, a similar result was arrived at and the employers were awarded seven thousand five hundred dollars' damages. This much-observed suit began in the year 1902, when the Metallic Roofing Company, of Toronto, refused to sign an agreement submitted to them by the union because it contained a clause that no non-union workmen should be employed by the company unless the union was unable to supply union men. A committee representing both the interested parties discussed the agreement at great length, but being unable to reach a settlement, the union declared a strike, and immediately approached outside parties who had been doing business with the Metallic Roofing Company, stating that the firm was unfair to organized labor, and trying to induce its customers to throw out the manufactured goods of the Metallic Roofing Company. The preliminary stages of the action were taken up in an endeavor to have the suit properly constituted, as not only in England, but in previous Canadian cases, employers had constantly failed in suing unions, because they were not bodies recognized by the law, being neither individuals nor incorporated entities.

Finally, however, it was discovered that a rule of practice existed, which enabled a plaintiff to have a number of persons represent a union and defend for the union, so that when an action was finally determined these parties representing the union in the meantime, the union itself would be responsible for the damages awarded. This practice has been followed with success in several other trade union cases since it was adopted by the Metallic Roofing Company, and it now appears a very easy thing to attack a trade union legally. The Metallic Roofing Company case finally came on for trial on its merits before Mr. Justice McMahon, who submitted certain questions of fact to the jury, and on its decision gave judgment against the Sheet Metal Workers' Union for seven thousand five hundred dollars.

The jury found that the workmen of the plaintiffs were wrongfully and maliciously induced by the union to leave their employers, and that although the actual interference was directly caused by the Local Union No. 30, it was endorsed by the International Sheet Metal Workers' Union. The jury also found that they conspired by threats and intimidation to induce the plaintiffs' customers to refrain from dealing with them. It is not too much to say that this is the most important decision that has been rendered on trade union law in Canada; it seems to settle once and for all, the rights of the employer against his union servants, and will, no doubt, exert a great influence in future disputes in Canada between labor and capital.

* * *

FALL TRADE.

The tone of the market in all the more important branches of trade keeps quite satisfactory, so far as the demand from a prosperous consuming public goes. That it *is* prosperous we find indicated as much by the high range of value in goods mostly in request as by the quantity needed. In some classes of articles the former feature is not so noticeable, but this is due perhaps chiefly to the fact that such goods are staples in which variation in quality is not a marked feature, that is to say, they are articles which, to be of any utility whatever, have to be of a fair quality, which remains more or less fixed. Of such a nature are many of the things that one obtains in the country hardware, or general merchandise store. Yet, even here the tendency towards "the best" is not invisible. The same purchaser who formerly would ask and only pay for a hatchet which merely looked a hatchet whether it would preserve a keen edge or not, now calls for and insists on receiving nothing but a hatchet which will stand the wear and tear of good hard usage. The other sort, of course, still find their purchasers, but it is the best goods that bring customers to the merchant's store, and keep them there.

In other goods of a more fancy character, however, this tendency is very marked, and is becoming more so every month. Dress and coating materials, ribbons, handkerchiefs, millinery, gloves, and the thousand and one articles that enter into a man's or a woman's toilet are all in strong demand along the line of quality. And while the city trade long ago became aware of the consumers' wishes in this direction, that of the country, in proportion, is becoming even more so. The old idea, in fact, that country people want apparel and other goods at a cheaper price, and of considerably inferior grade than their city cousins is being abandoned.

Even in food products, the desire for goodness even at higher cost, is evincing itself. And to a certain extent, especially again in the rural districts, the luxuries of former days have become the necessaries of these. The "higher standard of living," to which the prating of some of the American economists has accustomed us, is an accomplished fact in the Canada of to-day.

That these things conduce to a quicker movement, to a greater volume of trade, is a truism, and this autumn, unless all indications fail, the fact is likely to become more patent. So far as has come to our ears, wholesale merchants in practically all kinds of business, are meeting with satisfactory results of their year's trading. There can scarcely be said to be any strongly marked feature to which we have not referred in one recent issue or another, but the agreement of opinion is that "times are good." In some fields of activity, it is true that consumption has been restricted owing to high cost of materials and labor, but comparing this restriction with the sometimes extreme acuteness of the cause, it cannot be said that the net result is as much as might be expected. Woolens, for example, have reached a stage of value which may well be described as unprecedented. Yet the demand for woolens, while keeping as much to present requirements as is compatible with economic trading, cannot be complained of.

The above may be taken, as remarks representative in a general way, of conditions as they affect the older portions of the Dominion. But in the West, they apply still more forcibly. The advice which has been given to both merchants and farmers in our western country to pay outstanding debts before new ones be contracted, would appear likely to be acted on in large measure, and this will probably result in placing trade with that growingly important section on a more stable and satisfactory basis. This in turn will react favorably on trade in Ontario and Quebec, so that all in all, it may be said that the prospects for a good fall and winter's business were never brighter than they are now, especially when are taken into consideration the inevitable consequences of the past season's remarkably uniform good crops.

* * *

MONTREAL AND TORONTO COMPARED.

The figures published by the Montreal collector of customs, Mr. Robt. S. White, who visited Toronto some time ago to look into the reason for the large increase in duty collected at the port of Toronto as compared with Montreal, possess decided interest. He compares the relative progress of the two cities as regards population, assessments of real estate, street railway earnings, customs collections, clearing house returns, and value of the manufacturing output. Six items in all, the figures official in all instances. The record of growth is so plainly in favor of Toronto as to be somewhat startling, perhaps, to many stay-at-home Montrealers who have never been able to shake off their long-cherished impression of Toronto.

This impression was that of a cheeky place in the West which started out thirty odd years ago, "an overgrown village," it was then called, to rival Montreal as a distributing commercial centre by means of narrow gauge railways, etc. Such people have possibly ignored or forgot to give due credit to the many Montreal wholesale houses who opened branches in Toronto, and thereby enormously assisted her growth as an entrepot.

More natural, however, is it to infer that they did not know or give sufficient heed to the natural situation of Toronto, as the capital town of a province rich in field and forest resources, with minerals then little known, but since become abundant. A town on one of the great lakes and with railways radiating from it like the outspread fingers of one's hand. A town possessing men of foresight and enterprise, and surrounded for hundreds of miles on either side by an intelligent and thrifty people. All these advantages have been making themselves known thirty years past, and the remarkable growth of Toronto is a matter in which all Canadians, Montrealers not excepted, should take pride. All true Canadians are proud of Montreal, and only the narrow-minded among us dwell *ad nauseam* upon characteristics in her which are sometimes misunderstood and often exaggerated as hopeless defects. In fact, the more the two cities become acquainted the greater will be their respect the one for the other.

But we must proceed to examine Mr. White's collated figures, since he goes so far as to say that Montreal must bestir herself if she is not to lose her commercial supremacy to her younger rival. The results of recent years are thus summarized:—

Population—In thirty years Montreal's gain, 199,308; Toronto's, 155,131,

Real estate values—In thirty-four years, Montreal's gain, $98,644,000; Toronto's gain, $89,798,000.

Street railway earnings—In nine years Montreal's gain, $1,361,000; Toronto's gain, $1,451,000.

Customs revenue—In ten years Montreal's gain, $5,608,000; Toronto's gain, $5,865,000.

Bank clearings—In nine years Montreal's gain, $426,000,000; Toronto's gain, $412,000,000.

Manufactures—In twenty years Montreal's gain, $32,712,000; Toronto's gain, $40,803,000.

The growth of population is shown to have been as follows in the two cities:—

	Montreal.	Toronto.
1871	120,315	59,000
1881	168,923	96,196
1891	248,933	181,215
1901	319,623	214,131

This shows that the population of Montreal has increased by 165 per cent., while that of Toronto has increased by 263 per cent. in thirty years. With variation, however, for in the decade 1881-1891, while Toronto added 85,015 to its population, and Montreal increased only 80,010, yet in the succeeding ten years, 1891 to 1901, Toronto shows a gain of only 32,916, as against a gain of 70,690 by Montreal.

The ten years 1881 to 1891, "witnessed a remarkable exodus from the countryside into Toronto, accompanied by the inevitable inflation of land values and followed by the equally inevitable collapse." The returns of assessed values of real estate confirm this statement, they being as follows:—

	Montreal.	Toronto.
1880	$64,624,300	$42,024,400
1890	101,980,000	122,412,000
1900	148,095,000	112,594,300
1904	163,268,700	131,822,300

It will be observed from these figures, which do not include property exempt from taxation, the value of which is so very great in Montreal, that in 1890 the assessed value of real estate in Toronto was actually higher than in Montreal by $20,500,000. That was the consequence of the "boom" in land values. "The next decade, despite the gain of about 33,000 in population, saw a reduction in the assessed value of Toronto real estate of nearly $10,000,000, and it is only within the last five years that a substantial, healthy progression in values has returned. The progress of Montreal, on the other hand, has been continuous, both as to population and assessed values of real estate."

The returns of street railway earnings are favorable to Toronto, as indicative of the activities of its people. The transient population of the Ontario city is undoubtedly larger than that of Montreal, owing to the proximity of many large towns and villages. Here are the figures of earnings:—

	Montreal.	Toronto.
1895	$1,102,777	$992,800
1900	1,769,904	1,501,001
1904	2,463,824	2,444,534
1905, (thus far)	2,027,640	2,021,624

It is when the commercial returns of the two cities are compared, Mr. White goes on, that the picture is less fair to look upon from the Montreal point of view. The extent of the importing trade is learned from the customs collections, which indicate accurately the amount of goods taken into consumption at the two ports. The figures follow:—

	Montreal.	Toronto.
1885	$6,856,187	$3,274,875
1895	3,721,326	5,893,342
1905	11,591,656	9,586,707

In the twenty years covered by these figures the collections at Montreal have increased $4,735,469, or 69 per cent., while the increase at Toronto has been $6,311,832, or 192 per cent. Tariff changes, however, have had a good deal to do in producing this result, raw sugar, which is imported heavily at Montreal, and not at all at Toronto, having been dutiable in 1885, and free in 1895. So that a fairer comparison is that between 1895 and 1905. This shows a gain in customs revenues at Montreal of $5,608,314, or 94 per cent., as against a gain at Toronto of $5,865,381, or 157 per cent. "It would appear that Toronto has become more and more the distributing centre of imported goods, the supplier of retailers' wants throughout Canada at the expense of Montreal importers."

Another measure of commerce is the clearing-house returns, which indicate that Montreal is barely holding its own in the volume of business, while losing somewhat by the test of percentage, the figures being as follows:—

	Montreal.	Toronto.
1896	$527,858,000	$342,001,000
1900	734,941,000	513,697,000
1904	1,065,067,000	842,097,000
1905, 9 mos..	935,746,000	753,942,000

The volume of clearings at Montreal has risen about 100 per cent. during eight years, while at Toronto the increase has been 146 per cent.

The last test of commercial progress to be applied is that of local manufactures.

The relative strength of the two cities in manufactures is thus shown:—

	Montreal.	Toronto.
1881	$54,688,312	$19,562,981
1891	77,057,977	45,985,667
1901	87,400,789	60,366,857

They show that in twenty years the annual value of products manufactured in Montreal have increased 60 per cent., while in the same period the manufacturing output of Toronto has increased 209 per cent. This is a remarkable gain for Toronto.

As a shipping port it is improbable in the extreme that Montreal will ever be superseded. This is tolerably manifest, for Montreal is virtually an ocean port, while Toronto's importance as a lake port is much exaggerated by her people.

* * *

ABOUT EMIGRATION AGAIN.

Our remarks in an article of last issue, entitled "Emigration and its Detractors," may have been misconstrued into an aspersion of the idea that Great Britain should be able to find means for the employment of a large portion of its surplus population in its own fertile fields. Such interpretation is faulty. We believe that with proper legislation—legislation, however, which one cannot but admit would meet with such terrific opposition from many allied interests that it would almost surely die at its inception—the food of England could be produced by the men who eat it, and on land which now is a waste devoted to the rearing of game. What we intended to convey, however, was the fact that seeing how hopeless appears any attempt in England, to bring together the starving land and the starving denizens thereof who have been driven from it to swell the ranks of the cities' unemployed, it would be much better for these same to come to Canada, to a country which has the land and *wants* the people to till it. This is a very different proposition from saying the writer argued against the return of British unemployed to British land.

On the contrary, while we confess, that as Canadians, we have nothing to do with the manner in which the people of the Old Country conduct their land tenure laws, there does seem to be something radically wrong with the way in which they allow an appreciable portion of their rising man and womanhood to go to utter waste, mental, moral, and physical, through this very disunion of the land, and those who should be its workers. But, seeing that the laws are as they are, and seeing how even Britain's ablest legislators are powerless, or have not the courage to remedy them, we have to face conditions as we find them, disheartening though they be. And why should not Canada as an important section of the Empire, help itself by being the means of helping the almost helpless victims of the British system?

MAKE THE CITY KNOWN.

It is sometimes said that Toronto is already so well known in the United States that there is no need to do anything to advertise its attractions. It is only partly true that American tourists know Toronto; there are hundreds of thousands of such tourists; and while possibly tens of thousands know of us, only thousands come here. Besides many of those who have heard of this city as a progressive and a handsome place have but a dim idea where it is or how to get at it.

In September last, during the Industrial Exhibition, a man who travels much in the United States told the writer the following incident. It is best related in his own words. Said he: "I was in San Francisco three months ago, and as I had lived in Toronto all the previous winter, I put down 'Toronto' when I came to sign my name at the hotel. The clerk looked at the register and then said to me, 'We are always glad to see any body from Toronto.' I asked him why, and he said that he had heard good accounts of it as a clean, American-like city, and a pretty city, too.' "Well, so it is," said the man who was telling the story, "I don't know which is the prettiest city, Detroit or Toronto, but they are the two nicest cities in America, to my mind." "Now look-a-here," rejoined the hotel-clerk, "that's pretty nigh right, by what I've heard; but say, ain't it curious that the two prettiest cities on this continent should be so close together, one in Canada and one in our country, with only a narrow river between them." This San Francisco man had the notion, until he was told differently, that Toronto was on Detroit River instead of 250 miles east of it. And there may be many Americans in the West and South under misapprehension about us in this or other respects.

Speaking of the south reminds one of what the secretary of our Board of Trade has in view regarding residents from the Southern States of the Union visiting this city. Many other cities and towns in Canada and the United States have bureaus whose purpose it is to give information about the characteristics of the places they represent. Halifax, St. John, and Montreal, have such bureaus; so have Detroit, Pittsburg and other places. They issue by the thousand pamphlets or folders with illustrations of the attractions to be found in or around them, and with descriptions or statistics of population and trade, of house or hotel accommodation, and of facilities for travel. And the railways are always ready to help circulate these for the sake of the traffic they are likely to bring. These means have brought tourists in hundreds, if not thousands, to these places.

With how much more reason should Toronto have an Intelligence Bureau, if necessary a Business Men's Association, with one of its chief objects to let people outside her walls know that Toronto is a prosperous city, a healthy and delightful place to live, an ideal spot for recreation, a convenient point from which to reach any region in Ontario, Quebec, or the Northern States by boat or rail. If any body says, "People outside know that already," we answer, but they should know more. They should be told how to get here and what it costs; how much per week are rates at a good hotel or first-class boarding-house; told where the golf-links are; and about lacrosse, foot-ball, baseball; told of rowing, yachting, automobiling, and bathing at the Island; told that we have tolerable roads and drives, and a good street car service.

Mr. Morley, from his position as Board of Trade Secretary, should know well what curiosity about Toronto exists in other places. And he tells us that our great fault in the past has been to allow ourselves to be discovered by strangers. "Toronto," he declares, "could be made the playground of the Southern States if properly worked, and the city would benefit very largely for the small outlay necessary to advertise our special features * * * From the inquiries I have had during the past summer for literature, etc., I am thoroughly convinced that Toronto is sadly in need of a proper bureau of information. The southern tourist trade is already considerable, but with a systematic plan could be doubled the first year. It is a well-known fact that we in this city care for some five thousand students during the winter months, and these quarters would be available for tourists during May, June, July, and August." Systematic publicity will yield a good return, we have no doubt, Toronto ought not to let herself be outdone by towns and cities which do not possess attractions equal to hers. This is a matter which, if the Board of Trade choose to undertake, the municipality ought to help. Grants have been made by other cities to assist such a movement; and the results achieved showed that the money was well expended.

⁂

THE AMERICAN INVESTIGATION.

It was foregone conclusion that the life assurance imbroglio in the United States, and the official investigation which is now in progress, would eventually bear fruit of a very mixed kind: some of it good, some possibly bad, and some of doubtful public advantage. One of the unfavorable results is already painfully apparent in a partial, and in our view unjustifiable, impairment of confidence among policyholders and potential policyholders. There is no more sensitive plant than life assurance, which is only too readily blighted by the merest breath of scandal, from the effects of which other financial institutions are comparatively immune. It need hardly be remarked that the exceptional character of the contract is enough to explain the sensitiveness referred to. A bank may fail; and much of the present wealth of its depositors may thus be swept away; but there is possible amelioration in the future. But, should the same fate overtake a life assurance company, the hopes of many thousands may be extinguished for ever; destitution, not present only, but future and far-reaching, may be their lot. Clearly, therefore, absolutely trustworthiness is the first essential in life assurance; and when circumstances conspire to excite doubt in the minds of those who are interested—whether such doubt be reasonable or the reverse—it becomes a matter of extreme difficulty to hold a life assurance business together.

Inevitable impairment of confidence must be noted, therefore, as one of the immediate, but let us hope only temporary, mischievous effects of what is now transpiring in America. We venture, however, to suggest another. New brooms are said to sweep clean. It is to be hoped that the "brooms" of the investigating committee, and of the official new to the work he has undertaken, may not sweep too clean. Our meaning is this: economy in management is, in itself, a desirable thing; but it must not be pushed at the expense of efficiency. It unavoidably happens that most of those who have been appointed to reform abuses are without any previous experience of the business. They have no knowledge of its needs; and the danger is, that, in their anxiety to be "thorough," they may brush away, not merely abuses. but some of the conditions which are essential to progress and success. If rumor may be trusted, there are indications that the "reformers" are giving undue attention to subordinate details of management. which they do not understand. when they might more advantageously confine themselves to the up-rooting of flagrant evils, which may be detected without anything in the nature of prying.

But it is permissible to hope that, when a balance is struck between the good and the bad effects of the investigation now in progress, it may prove to preponderate largely in favor of the former. To begin with, it seems inevitable that the periodical examinations made by the insurance departments will, in the future, be more stringent than those of the past; for the boasted State supervision seems now to have been a more hollow affair than was previously suspected.—The "Insurance Record," London.

⁂

VANCOUVER'S TRADE WITH THE YUKON.

It is satisfactory to note that Vancouver's trade to the Yukon is holding its own well in competition with that from across the International Boundary. It exceeded that of 1904 by 2,647 tons. We are told by the "Province" newspaper of that city that a clean-up of all Dawson-bound freight at White Horse by the White Pass & Yukon Railway Company—something unprecedented in the annals of Yukon transportation—was a remarkable feature of this season's operations. Ever since the White Pass Railway was opened for traffic—until this year—the close of navigation on the Yukon always found hundreds of tons of freight caught at White Horse by the ice. In 1904 there was 200 tons of merchandise which had to be held in warehouse at White Horse all winter, and besides the merchandise there was several hundred tons of steel rails consigned to the Klondike Mines Railway that did not get through. In 1903 no less than 2,000 tons of merchandise had to be held at White Horse through the winter. The White Pass Railway, it says, is to be congratulated on having wound up the season of 1905 with a clean sheet. It accomplished the movement of all the heavy freight tonnage turned over to it by connecting ocean lines by reason of the steadiness of water in the Yukon at good navigable depth throughout the summer.

⁂

TORONTO CLEARING HOUSE.

Mr. Yarker tells us that the Toronto Clearing House will take on some additional work, beginning with November. That is, it will clear daily promissory notes and acceptances, as well as cheques and cash. This means, we presume, that promissory notes and acceptances will be presented at the clearing house each morning, taken charge of by the representative of each bank there, in attendance, who will return the same at a session in the afternoon. The process is intended to replace the present method of sending such documents to the office of each bank. It has been adopted by the Clearing Houses of Detroit and Buffalo, and is found to have an excellent effect in stimulating firms and companies to be more than ever particular about their acceptances.

We are favored by Mr. Yarker, manager of the Toronto Clearing House, with some comparisons of clearings in October, 1904 and 1905, as well as those in the ten months of these years. Thus:

Month of October, 1905	$ 97,138.249
Month of October, 1904	82,763.595
Increase, 1905	$14,374,654
Ten months, 1905	$851,081,249
Ten months, 1904	664,040,167
Increase, 1905	$187,041,082

The manager goes further, and makes comparison of the figures of this clearing house for the whole year, 1904, and the probable figures for the whole calendar year, 1905, as follows:

Year, 1904		$ 842,097,066
Ten months, 1905	$851,081,249	
Estimate for November and December, 1905	180,000,000	1,031,081,249
Estimated increase, 1905		$188,984,183

OUR SAINT JOHN LETTER.

The granite manufacturers of St. George, Charlotte county, are preparing to appear before the Tariff Commission when it comes to New Brunswick, and will ask for more protection against the granite cutters of Scotland, who are able to ship to Canada and sell at prices below those the Canadian manufacturers find profitable. The industry at St. George is an important one, giving employment directly and indirectly to between 2,000 and 3,000 persons.

Sir William C. Van Horne and Mr. McNicoll of the C. P. R. have both publicly declared that their corporation has no intention of creating a winter port at L'Etang, on the Atlantic coast of New Brunswick, near St. Andrews, in Charlotte county. There is still comment, however, on the fact that within the past fortnight Capt. Walsh, a prominent official of the C. P. R., has spent two days at L'Etang, and that Mr. J. Sutton Clark, who operates a sardine factory at the place and controls practically all the shore rights, has received from some unknown source an offer of $100,000 for his property. Mr. Clark has refused to sell at this figure and the people both at L'Etang and at St. John are watching anxiously to see what the next move will be, and who will make it, for there are rumors that the Grand Trunk Pacific also has its eye on L'Etang.

The Canadian Pacific is making preparations for the biggest winter business in the history of the port. Announcement was made to-day that upwards of 6,000,000 bushels of grain will be shipped through St. John. This is more than a million bushels in excess of the record. The Canadian Pacific announce that there will be thirty-five sailings of their steamers, twelve each to London and Bristol and eleven to London. The Allan and Donaldson lines will run weekly trips to Liverpool and Glasgow respectively, and there will also be steamers of the Furness Line to London, the Manchester Line to Manchester, and the South African Line to Capetown, and possibly the Franco-Canadian Line to France. Something in excess of one hundred sailings is the expectation.

Fire in the Queen Hotel at Fredericton one day last week did considerable damage. It was at first feared repairs could not be completed in time for the visit of Prince Louis of Battenburg, but the hotel manager was equal to the emergency. The Prince, while in St. John, showed appreciation of every thing done for him. One incident that won for him much favor was a visit to the Oak Hall clothing store. One of the windows of this establishment had been dressed in honor of the Royal visitor, and showed his fleet coming up the harbor with the word "Welcome" above it. The Prince was walking up the street when he saw the decoration. He at once entered the shop, asked for the window-dresser, and warmly thanked and congratulated him.

It is not always that one can write of the generosity of a lawyer, but the will just probated of the late Mr. L. P. Fisher, of Woodstock, shows he was one with a heart in the right place. He left an estate valued at $474,000, and there are made by it very generous contributions to local and other charities, as well as provisions to give the town of Woodstock a free public library, public hospital; to build a thoroughly modern school building, with provision for a night school; lands for a public park; and to equip and maintain a free manual, industrial, training, technical and art school in Woodstock. Generous donations are made to the different churches of the town and to the Salvation Army for the poor of the parish. Of course, there is provision for Mr. Fisher's widow during her life.

A important St. John industry, the Maritime Nail Works, making nails of all kinds, has been sold to the Capewell Horse Nail Company, of Hartford, Conn., the largest concern of its kind in the United States. The deal was put through very quietly, and the new managers are now in possession. The property has paid 10 per cent. for many years. The American concern have bought because the anti-dumping clause of the Canadian tariff compels them to own works in Canada to hold their Canadian trade.

Lieut.-Governor Snowball, of New Brunswick, in his private capacity, has begun a suit against the Dominion Government for $75,000 damages on account of the expropriation of the Department of Railways of the Canada Wharf, deep water terminus at Chatham of the Canada Eastern Railroad. He claims a half interest in the wharf and says it was not included in the sale of the road made by the Gibson concern. The Government dispute the claim.

* * *

St. John, N.B., 31st October.

BANKING AND FINANCIAL.

The Molsons Bank has established a branch at Dutton, Ontario.

Messrs. H. O'Hara & Co., Toronto, have just purchased $10,500 Township of York debentures, bearing 4½ per cent. interest yearly, payable in twenty annual instalments which they are offering for sale to yield an investment of 4⅛ per cent.

In an item under this heading we were last week made to say that "Mr. Fraser, the Provincial Architect," was one of the applicants for a charter for a new bank in Ontario. This should have read "Mr. Fraser, the Provincial Archivist."

Shame and remorse, as well as fear of punishment, may well have actuated the cashier of the Enterprise National Bank, of Allegheny, Pa., where he killed himself upon the discovery of his bank's ruinous losses by making advances to political vagabonds. We have long been accustomed to hear of municipal corruption in Philadelphia, and of malversation in Pennsylvania State affairs. One would have thought differently, considering the deservedly high reputation Philadelphia has in other directions, but it can run New York a close race in the abuse of public trusts.

The position of general manager of the Bank of New Brunswick has been conferred upon Mr. R. B. Kessen, at present manager of the Montreal branch of the Bank of Ottawa, and he will enter upon his duties about the first of January next. Mr. Kessen was born in Scotland, where he spent some years in a commercial house, after which he went to Australia, where he began his banking career. In 1892 he came to Canada, and has been connected with the Bank of Ottawa since that time, being at different times connected with the Winnipeg and Toronto branches of that Bank. He has been well trained, is in the prime of life, and has made a good record for himself in the Dominion. Those who know him well say that he is exactly the man to suit the Bank of New Brunswick people, being prudent, methodical, and well trained in his profession.

It is natural, bearing in mind the remarkable development of Canada and the extension of her commerce in the past few years, that there should be a movement towards extension of banking facilities. And it is quite legitimate that new banks should be projected which may share in the increased business to be done. In such cases, however, so important a project as a new bank should only be supported when it can show good reason for the likelihood of its success and when it can put before the public the names of respectable and influential men as provisional directors, together with—and this is most important of all—the pledge of success which is afforded by a tried and competent manager. The United Empire Bank, whose prospectus is before us, offers to the public good arguments for bringing a new bank into existence and a fair guarantee in the personnel of its directors and manager for belief in its success. We know at least one of its Old Country directors for a person of large means and influence; and in the Canadian list are men prominent in the business world of Ontario. Mr. G. P. Reid has fairly won his excellent reputation as a Canadian banker, his administration of the Standard Bank for many years having been in a high degree satisfactory to shareholders. Two millions of the share capital is now offered for subscription at par; and we note with interest that preliminary expenses are to be kept within such careful bounds that it it is not deemed necessary to ask subscribers to pay a premium on their stock. There is, we are told, a considerable sum already subscribed. The terms of subscription have been made extremely easy.

PROSPECTUS OF

United Empire Bank of Canada. Head Office, Toronto, Ont.

The charter of The Pacific Bank of Canada has been acquired and application made to Parliament for authority to change the name to UNITED EMPIRE BANK OF CANADA. Also to increase the Capital from $2,000,000 to $5,000,000.

CAPITAL	$5,000,000	20,000 Shares at $100 Per Share.
PRESENT ISSUE	2,000,000	Issued at Par.

SAMUEL BARKER, Esq., M.P., Director the Landed Banking and Loan Co., Hamilton.

GEORGE A. CLARE, Esq., M.P., President Clare Bros. & Co., Limited, Preston.

E. E. A. DUVERNET, Esq., of the firm DuVernet, Jones, Ross, and Ardagh, Barristers, Toronto.

LORD ERNEST HAMILTON, Director Employers' Liability Assurance Corporation, Ltd., London, England.

EVAN H. LLEWELLYN, Esq., M.P., Director Great Western Railway Co., London, England.

REV. T. C. STREET MACKLEM, D.D., Provost and Vice-Chancellor of Trinity College, Toronto.

M. McLAUGHLIN, Esq., Member of the late firm M. McLaughlin & Co., Millers, Toronto.

WILLIAM J. SMITH, Esq., President and Manager J. B. Smith & Son, Lumber Merchants, Toronto.

The remarkable advance made by the Dominion of Canada during the past five years and the great development of its natural resources have been so significant as to attract the attention of capitalists and investors at the financial centres of two continents.

It may very properly be said that no new country at a similar stage in its history, not excepting the United States, has given such promise of commercial greatness and material prosperity. Canadian securities—Government, Railway, Financial and Land—occupy a very high position in the stock markets of the world.

A notable feature of the past five years has been the growth of the trade between the Mother Country and Canada. The very certain prospect of increasing trade relations —with the probability of their being further encouraged by a closer union—the much more active interest in the Dominion now being taken by the capitalists of Great Britain, and the tide of improved immigration now making for Canadian shores, suggest that the time is most suitable for the establishment of a bank which shall not merely realize success in its operations, from the actual needs of the Dominion, but shall emphasize the rapidly growing commercial relations within the Empire.

The UNITED EMPIRE BANK OF CANADA will operate throughout Canada with an office in London, England, and later, if the occasion demands, at other large centres in Great Britain.

While being a thoroughly Canadian institution under Canadian management, its directorate will include three or more prominent financiers of London, England.

Although the Provisional Executive have already received offers of large subscriptions for stock from English investors, it is intended to limit the holdings of any one person or corporation and to secure the greater portion of its share capital in Canada, in as widely distributed holdings as possible.

While there have been since 1900 three new banks established in active operation in Canada, all of which are meeting with success, there are fewer banks in existence in 1905 than there were in 1890.

Canada is fortunate in possessing a banking system which, in legislative safeguarding, is unsurpassed by that of any country in the world. The regulations of the Canadian "Bank Act" provide for the fullest security to the investor in bank shares.

The conditions precedent to the establishment of a new institution are now of so stringent a character as to prevent any but a responsible organization from undertaking the banking business.

The currency system by its elasticity avoids "money trouble."

No business possesses the same safety.

No business has been more uniformly profitable.

A bank begins to earn profits for its shareholders from the outset.

Its capital is not laid out in plant and stock like a new industrial or mercantile business.

During the past ten years the actual returns of Canadian banks to their stockholders, after setting aside a portion of their annual profits as a reserve fund, have ranged from six to twelve per cent.

During the past three years the earnings have averaged fifteen per cent. per annum per institution.

The prices of bank shares in Canada are most significant, ranging from 125 to 300 per hundred of par value, with the exception of a very few institutions whose stocks are not actively dealt in or quoted on the regular exchanges, but every one of which is paying regular dividends on its capital and accumulating a reserve fund.

Owing to the rapidly increasing needs of the country nearly every bank in Canada, whose existence precedes 1900, has been called upon to largely increase its capital in the past ten years. The new stock has been offered in almost every case at a high premium and under the regulations of the Bank Act must necessarily be first offered to the existing shareholders. The opportunity of investing in bank shares can be obtained by the general public only by purchase in the open market at the high current prices.

The Directors of the United Empire Bank of Canada will be men selected with a view to their business capacity and financial ability. While they will be men of means and thoroughly representative, special regard will be paid to their fitness and capability for the position.

The General Manager will be Mr. Geo. P. Reid, for ten years General Manager of The Standard Bank of Canada. The success of this institution under his management has been widely recognized. Mr. Reid possesses an enviable reputation as being a sound and conservative banker.

Shares will be $100 par value. As preliminary expenses will be kept within very small limits, it is not considered necessary to issue the stock at a premium.

The terms of subscription will be $10 per share on allotment, $10 per share on the first day of the month immediately following the date of allotment, $10 per share every month thereafter on the first day of the month until the whole amount is paid.

Interest at the rate of FOUR per cent. per annum up to the date fixed for payment will be allowed on payments made in advance.

The provisional Directors reserve the right to reject or allot any subscription in whole or in part.

Applications for Stock should be made to MR. GEORGE P. REID, Secretary.
Lawlor Building, Corner King and Yonge Streets, Toronto.
Stock Books Now Open at Above Address.

Cheques, drafts, money orders and other remittances on account of subscriptions for stock should be made payable to SAMUEL BARKER and GEORGE P. REID.

INSURANCE MATTERS.

Halifax is in great danger of a water famine. Not for thirty or forty years have the lakes from which the water supply of that city is drawn been so low. Our correspondent tells us that notices have been issued repeatedly warning citizens of the danger and asking them to conserve the supply of water carefully. The past summer and autumn have been extremely dry seasons, and unless heavy rains fall next month the situation will be serious. As it is, if a large fire should occur, the consequences would be unpleasant to contemplate with the present inadequate supply.

At the October meting of the Actuarial Society of America, the council took action with respect to titles of members. The title "Fellow," with the initials F.A.S. was voted to each full member of the Society, while each associate member receives the initials A.A.S., indicating associate.

Mr. H. M. Price, of Quebec, a lumberman owning timber limits along the Drummond County Railway, now a part of the Intercolonial route, has just recovered $55,000 from the Dominion for damages accruing from fire started by sparks from an Intercolonial Railway locomotive, the road being owned by the Government. The case is of importance and was watched with great interest.

It has been reported by the experts of the Committee of Twenty of the National Board of Fire Underwriters, that the conflagration hazard in San Francisco is extremely bad. "In fact, San Francisco has violated all underwriting traditions and precedent by not burning up." This is due in no small degree to the remarkable vigilance of the fire department, for the city is built on a series of hills and high winds prevail, especially during the summer.

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ended with Thursday, November 2nd, 1905, as compared with those of the previous week, as well as the corresponding table omitted from last issue by reason of the holiday. Attention is also called to the figures of last week, which are for only five days:—

	Nov. 2.	Oct. 25.
Montreal	$28,589,319	$21,451,298
Toronto	22,817,954	18,259,532
Winnipeg	11,606,527	8,091,501
Halifax	1,876,649	1,530,147
Hamilton	1,405,718	1,108,467
St. John	1,139,569	826,701
Vancouver	2,307,116	1,734,912
Victoria	589,417	612,466
Quebec	1,667,486	1,231,552
Ottawa	2,340,853	1,959,500
London	1,081,320	809,207
Total	$75,419,928	$57,615,283

	Oct. 25.	Oct. 19.
Montreal	$21,451,298	$28,395,161
Toronto	18,259,532	22,871,302
Winnipeg	8,091,501	9,704,142
Halifax	1,530,147	1,861,439
Hamilton	1,108,467	1,428,960
St. John	826,701	1,220,905
Vancouver	1,734,912	2,166,150
Victoria	612,466	803,262
Quebec	1,231,552	1,620,065
Ottawa	1,959,500	2,676,454

Total	$57,615,283	$73,866,977

Vault doors in Bank of Montreal and Royal Trust Company, Montreal
Three times larger and heavier than any other in Canada. Doors and Vestibules weigh **60 tons**. Total weight of lining and doors **260 tons**. Accepted to be the finest piece of vault work in construction and workmanship in the Dominion. — Built by the old established firm of

J. & J. TAYLOR, Toronto Safe Works, Toronto.

Established 1855.

The Ross rifle factory at Quebec, which is erected on government property, is claiming that it is not subject to city taxes for that reason, and because the goods it manufactures are for militia purposes.

Maltais & Co., a firm of general dealers at Murray Bay, on the St. Lawrence, are reported to be seeking a compromise at the rate of 60 cents on the dollar. Pierre Maltais, the senior of the firm, was previously unsuccessful in 1892, and again in 1895, just before the formation of the present firm. They have been considerable operators in spoolwood, and their transactions in this direction are understood to have been not attended with much profit.

It is stated in the "Globe" that an order in council has been passed reducing to twenty acres the area that an applicant for mining locations can get in the township of Coleman, in the Cobalt mining region. It was formerly 40 acres. On the 28th of August last the recording of mining claims in the four townships of Coleman, Lorraine, Bucke and Dymond was suspended for the time being. It is now provided that these applications may be recorded on conditions that the applicants become bound by any amendments and additions to the mining laws and regulations that may be made by the Legislature at its next session in regard to working conditions, taxation and other matters whatsoever. This does not affect Cobalt Lake, Kerr Lake and the Gillies limit. No reduction is made in the area of mining locations in the townships of Lorraine, Bucke and Dymond.

THE NEW WESTMINSTER EXHIBITION.

A partial description of the Dominion Exhibition at New Westminster, British Columbia, received last week, was held over for a fuller account promised but which, however, has apparently gone astray in the mails. We, therefore, supplement our own information with some particulars obtained from Western newspapers. Our correspondent declares that the event was a very creditable and successful one. He says, the West made a very good showing of its riches from out of the soil, and some parts of the East arose to the occasion. The grounds were well arrayed and the buildings attractively colored. The industrial building, which is of good size, was much needed, and the cattle sheds proved a great improvement. It was a fine occasion for the rich district of which New Westminster is the centre, to show its rich agricultural resources.

Ten days was the period during which the Exhibition was given, and in that time no fewer than 92,500 persons passed the gates. Inasmuch as the cash receipts at the gates are stated at $24,231, it is manifest that revenue was derived from other sources than men and women, girls and boys, who at 25 cents per head would have yielded $23,125. There must have been a goodly number of horses and also traps, for, indeed, the residents thereabout are great riders and drivers. The Exhibition had unfortunately to contend against rainy weather, else probably the attendance was still larger. But the figures quoted attest the efforts of the management and the response of the residents of New Westminster and neighborhood. The $50,000 given by the Dominion Government to assist in making this a Dominion Exhibition was money well bestowed.

* * *

THE WESTERN GRAIN YIELD.

A special despatch from Winnipeg to the "Mail and Empire," under date 24th October states that Mr. Frank O. Fowler, secretary of the North-West Grain Dealers' Association has issued the following revised estimate of the 1905 crop of Manitoba and the Territories. The figures are compiled from 700 reports received from all points in the West. It will be noted that Mr. Fowler now estimates this year's yield of wheat at 86,810,400 bushels, as compared with his estimate made last month of slightly over 91,000,000 bushels.

Grain.	Acres.	Yield per acre.	Total.
Wheat	4,019,000	21.6	86,810,400
Oats	1,423,000	46.6	66,311,800
Barley	433,800	31	13,447,800
Flax	34,900	13.7	478,130

There had been wheat marketed on October 21st of this year as follows:—

	Bushels.
Inspected to date.....................	15,515,000
In store at country points.............	10,719,000
In transit, not inspected...............	1,000,000
Total	27,234,000

* * *

COMPETITION IN BUTTER MARKETING.

While we suppose it may be true to say that the quality of the dairy products exported from Canada is tending towards improvement, there can be no mistake that every now and then the industry is given a serious set-back through the carelessness, or worse, of shippers. Perhaps if the latter fully understood and realized the very great competition which is now going on in these products, especially in the British markets, they would amend their ways, in their own interest and to the good name of Canada. Mr. P. B. Ball, Canada's wide-awake commercial representative in Birmingham, sends to the Department of Trade and Commerce at Ottawa a copy of an article which had appeared in the "Times" on "Butter Control in Holland," which, describing as it does the steps which the Netherlands Government has deemed it advisable to take in order to add to the reputation of the butter shipped by that kingdom, should be of interest to all those interested in the industry in this country.

The following are excerpts from the article in question:—

The virtue of cleanliness, for which the Dutch people are so deservedly famed, is nowhere better exemplified than in their butter factories, and the success of these must be largely attributed to this circumstance. To produce a pure article, however, is one thing; to ensure it against adulteration is another. The latter point has not been lost sight of; for the first Butter Act of the Netherlands was passed in 1889, and was rendered more stringent in the following year. Infringements of the Act are punishable by imprisonment for a period not exceeding three months, or a fine of 300 guilders; also by imprisonment not exceeding six months, or a fine of 600 guilders. If the infringement relates to goods extended for export to other countries, the penalty is doubled.

To inforce the provisions of this Act a separate service has been brought into operation, comprising an inspector and a number of visiting inspectors. Samples taken by these officials, or by the police, of any article resembling butter, and not marked according to law, are examined by qualified analysts. These examinations used to take place at the Government experimental stations; but, by a Royal decree of February, 1903, the work was transferred to a Government dairy station, for the establishment of which at Leyden the same decree made provision. This dairy station acts for the whole of Holland. It exercises supervision over all the stations known as "butter control" stations, which have been established by agricultural societies and dairy associations. They are partly under the supervision of non-interested persons, including usually members of the Provincial Governments.

TAXES ON COMMERCIAL TRAVELLERS.

Few things have occurred of late in connection with Canadian trade more than the imposition of the obnoxious tax on salesmen from outside Quebec Province to arouse the indignation of merchants from elsewhere in Canada, or merchants in the United Kingdom who do business in that province. Mr. J. B. Jackson, commercial agent at Leeds, writes to the Ottawa Department of Trade and Commerce that the operation of this tax is causing him no end of trouble with the Yorkshire exporting firms, and is having a very retarding effect upon Canadian trade. The average exporter, he says, does not readily grasp the difference between a Dominion and a Provincial tax. Englishmen say: "Why do you impose a duty upon our goods, and at the same time impose a tax upon our travellers? It is unfair and in direct violation of the spirit of the British preferential tariff."

The official named remarks that British exporters having resident agents in the Province of Quebec are in grave doubt as to the position in which members of a firm would be if they went over to Canada to assist their resident agent. "The large firms in the West Riding of Yorkshire pay their resident Montreal agents either salary or commission, and they think it very hard that, having such resident agents, the head of a firm desiring to take an occasional run over to Canada to assist his agent should run the risk of incurring penalties ranging from $500 to $1,000 for each offence."

A very decided expression of disfavor with regard to this tax appears in a resolution adopted at the autumnal meeting of the Association of Chambers of Commerce of the United Kingdom, held last month at Liege, Belgium. The resolution, which was moved by Mr. S. B. Wheway of Walsall, was as follows:—

"That this association notes with regret the proposal of the Quebec Legislature to impose a tax upon commercial travellers in Quebec, including British commercial travellers, and would respectfully urge upon His Majesty's Government the desirability of a strong protest being lodged with the Quebec Legislature in particular, and with all the colonial governments, against this practice of taxing British commercial representatives in the colonies."

The resolution was moved, Mr. Wheway said, in consequence of the notice by the Quebec Legislature of their intention to impose a tax of £60 annually on all commercial travellers visiting that Province, the Walsall Chamber thought the the time had now arrived when the Associated Chambers should protest against a tax being placed upon British travellers going to the colonies. The Manufacturers' Association of Canada had lately visited England, and had been received with great amity, and he therefore felt that the present time was opportune for the British Government to take the necessary steps and protest to the Federal Government of Canada against the proposed law being carried out. A great deal was heard of colonial preferential treatment at the present time, and a substantial step in that direction would be taken if the proposed tax was not made applicable to British commercial travellers, although they were quite agreed that their colonial friends were perfectly right to tax travellers from foreign countries if they liked.

Mr. M. Zossenheim (Leeds), in seconding the resolution, said that the infliction of such petty taxes was derogatory to the unity of the Empire.

Mr. W. H. Mitchell (Bradford), objected to the words "strong protest," and suggested the Chambers should ask the Canadian Government to endeavor to obtain a remission of the tax in the case of British subjects. He therefore moved as an amendment the substitution of the following words after "desirability" in the fifth line of the motion, namely, "of endeavoring to obtain a remission, or, if that be not possible, a reduction of the tax in the case of British subjects, and of similar taxes in all British colonies."

Mr. F. W. Cook (Dudley), having strongly supported the amendment, it was put and carried, and was subsequently carried as a substantive motion.

* * *

ROAD ACCIDENTS.

Canadians and Americans are apt to laugh sometimes at what they consider the wrong-headed, contrary methods of Old Country people in many respects. For example, they jeer at the habit which prevails in England and some other European countries of keeping to the left in driving horse and other vehicles. But why should not a horseman keep to the left rather than the right? Being usually a right-handed man, he sits to the right of his animal, and is thus placed, if he passes on the right of vehicles moving in a contrary direction, at a grave disadvantage in ascertaining how close to or how far from the wheels of his own they are approaching. If, on the contrary, each carriage passes on the left of the road, the driver can watch another approaching and judge accurately just what space he has at his command. So, after all, there is little to praise in our own rule of the road—which does not, however, prevail in the Maritime Provinces—excepting in so far as it is the custom; and this indeed is a virtue which it shares with the opposite rule in England.

These few discursive remarks are rendered the more opportune by the number of accidents constantly happening, more particularly to members of the fair sex, from the unnatural requirement of having to alight from a street car on the right-hand side of the road, thas having to hold on by the left hand. A visitor to Montreal recently, observing this anomaly, made the suggestion that many accidents would be avoided if the rule of the road for tram cars—and we suppose for other vehicles—was to keep to the left. This gentleman wrote to the city surveyor as follows:—

"As a railway man and an Englishman who has travelled much, will you allow me to say that it is not the fault of the passengers at all, but the fault consists in the cars running the wrong side of the streets. Reverse the system, and you will have no accidents from people alighting from the cars or boarding them. Run the cars as in the Old Country, to the left, and everything goes easy. It is more difficult for people to alight on the right foot than on the left. The latter is by far the best method; try it for yourself. Make the plan universal throughout the city—the right hand for pedestrians and the left hand for vehicles, and you will be free from accidents."

The idea is certainly worth considering. Many people, especially, as we have remarked, ladies, in alighting from a car, involuntarily take hold of the side railing with their right hand, the result, of course, being that they get off with their faces in the opposite direction to that in which the car is travelling, with consequences that are immediate and startling in the event of the car suddenly moving forward.

* * *

"BARNARDO CHILDREN."

Much controversy has been aroused in Canada over the bringing into Canada of children from the poorer parts of London or its precincts. Some have argued and believed that such importation was dangerous because the children or youths so brought in were in many cases incorrigibly bad, and therefore a danger to the commonwealth. Experience has proved, however, that only a very slight percentage of the thousands brought in by such agencies as those of Dr. Barnardo and Mr. Fegan have turned out badly, whereas the overwhelming majority have grown up to be not only self supporting, but have become good citizens and property owners. The death last month of Dr. Barnardo, who was a real philanthropist, a person of practical sense, and a valuable man, makes some reference to his work appropriate. He had been the means during the twenty or thirty years he had supervised in England the Barnardo homes—maintained by private subscription—of rescuing from poverty, disease and crime, some 32,000 children. Most of these were sent to Canada, where they obtained employment on farms, in homes, or in fruit orchards, or were put to handicrafts. And the value of his work is not doubted by any who have an intimate knowledge of its outcome. As to the principle of his work, here is what he himself wrote, not many weeks before his death:—"As to our scientific method, there is not much to be said except this: that we have demonstrated the superiority of environment to heredity. I suppose there has never been such an example in the world as our institution affords of the great fact that heredity is not so invincible a foe to human life as has been thought. We have proved that if a child who is the son or daughter

of criminals, or prostitutes, and also the grandson or granddaughter of the same, and of whom we can prove that even the great-grandfather or great-grandmother were of the same class—if that child is taken early enough from its evil environment and planted down in an absolutely new, fresh and Christian environment, and kept in it long enough, the power of heredity appears to be neutralized."

* * *

NORTH OF ENGLAND LETTER.

A new pastime for a few captious people is the discovery of awful examples of the evils of preferential tariffs. One instance is found in Natal. Another is taken from Canada by an ingenuous writer of letters to the editor, who prefers anonymity, and lives in Birmingham. Analysis of a list of trade-openings has shown him that 59 Canadians are anxious to sell goods in England while only 11 have the disposition to buy. One might point out that sellers are usually more numerous than buyers and that money may be made by either process. Our discoverer overlooks those facts and goes on to give a melancholy example of insular selfishness, and an interesting peep at the one-sidedness of certain free traders. For he explains that this is significant of how Imperial preferences would work if—he sarcastically repeats the if—it were adopted by this country. From such childish displays one can only suppose that the writer, or those who think with him, lay it down as the whole duty of Canadians to buy and be thankful. Selling is the sole prerogative of Englishmen in England. But we are not all quite so narrow-minded as this Birmingham man.

One, John Olding, of Toronto, who visited nine hardware stores in your city in the vain effort to find a trowel of English make writes to reproach our manufacturers for their slothfulness. Of course, to such complaints, one hardly ever sees a satisfactory reply. There may be reasons cogent enough, but nobody responsible troubles to give them publicity. The same correspondent adverts to the absence of British exhibits at the Toronto Fair. Our manufacturers are somewhat tired of exhibitions, the repeated scandals and fiascos associated with the greatest modern ones supplying the reason. If the promoters of Canadian exhibitions want British support they will have to work as hard as if their business were advertising or life insurance. Possibly their space can be let with less effort to other people. If it should ever be that the support of English manufacturers is sought specifically, the management will do well to let everyone know that a special occasion is being made of an old-established and well reputed trade carnival. That—rather than a mushroom affair—is the sort of function the natural Englishman prefers to patronize.

With much the same surprise as Monsieur Jourdain, who discovered accidentally that he had been talking prose all his life, we find ourselves well on the way to a trade boom. Our £242,000,000 worth of domestic exports in nine months are nine millions in excess of those of the whole of 1898. That indication in its isolated state is illusory, but the shops are talking more money, railway receipts and clearing house returns are advancing, the metal trades and cotton are eminently satisfactory, in the produce markets optimism prevails, and even in the backward markets there is a firmness which augurs well. All this is in accordance with the theory of trade cycles and quite to the taste of people who have long been on short commons. Accidents excepted we should have a prosperous 1906, and the more so because nations, in whose prosperity we share, are also facing agreeable conditions.

A Manchester paper says, "as usual the packing of American and Canadian apples is all that can be desired and in striking contrast to the slovenly handling of those of English growth." The impeachment of domestic growers is well warranted, but even they are promising amendment and nothing will pay Canadian packers better than stout adherence to a high standard.

A tea cup storm has sprung up over some misapprehensions between Mr. Jellicoe, an English parliamentary candidate, and some C. M. A. delegates, who crossed to Quebec with him in the "Victorian." What Mr. Jellicoe said has derived an altogether fictitious importance in Canadian eyes. As yet he is a political nobody, and while his mis-statements deserve correction, it need not be assumed that he has any eminence calculated to lend weight to palpable errors. In the Walton division, of Liverpool, Mr. Jellicoe is the Liberal hope, in the rest of the Kingdom he is just a plain specimen candidate whose fussiness is of the least possible account.

Agents of the Government of New South Wales are at work now in various parts of the country in the interests of immigration. The Canadian climate fares badly in the comparisons drawn between it and Australia's own. Dangers of drought are belittled by reference to artesian wells, and highly optimistic estimates of the stock-carrying capacity of the colony are based on a none too definite statement about the growth and employment of "dry feed." Certainly the lantern pictures are alluring. The grapes, coffee plants, pineapples, sugar fields, date palms and cherry trees come out handsomely on the screen. In printed matter and in wealth of detail Canada remains unbeaten, and, as yet, has little to fear from Antipodean competition.

A good service of cold-store steamers up the Ship Canal to Manchester is the one missing factor in the Anglo-Canadian butter trade now. From 80 to 100 tons weekly of Canadian butter is handled by Manchester dealers now, and were our splendid docks and unrivalled facilities for handling traffic utilized, there need be no doubt that the trade would grow with the utmost rapidity. At present, merchants in the leading distributing centre of the North and Midlands must import over Liverpool, suffering delays and expenses which ought not to interrupt the development of the business. How long the present faulty system of transmission will endure one does not know. But Canadians ought to bear in mind the fact that Manchester is the heart of a far larger and denser population than the metropolis itself. Towns fringe its borders in all directions and they again are neighbored by other towns, so that one may ride forty odd miles away to Leeds, in Yorkshire, without ever escaping the smoke-pall or being aware of any but the slimmest patches of what could be called country. The district is not lovely, but it is the best in England—and probably the best in the world—for business, as every commercial traveller experienced in the trade of this country will declare. Only Tyneside and the sister valleys of the north-east coast are fairly comparable to the Manchester area in wealth. And it is no local pride or foolish jealousy that makes one urge upon Canadians the need of getting their dairy products into the head larder of England by the most direct means. The Dominion's Dairy Commissioner, Mr. J. A. Ruddick, has been upon the spot, surveying all arrangements and addressing provision traders assembled at the Produce Exchange. He will be able to assist his Government in forming any decision on the improvement of transport.

Australia is beginning to take a closer interest in our busy North. Six agents-general have been in Hull this week on business connected with a projected subsidy for liners from Down-Under. It is proposed to bring wool for the Yorkshire mills into a Yorkshire port, and other Australian produce much nearer to the hungry millions than is Thames mouth. To Hull most of the Danish butter is consigned to Manchester and elsewhere. A proportion comes, however, via the Canal, despite the lengthy détour at sea necessary to reach the west coast from Continental ports.

NORTH COUNTRY.

Manchester, October 13th.

* * *

GLASGOW TECHNICAL COLLEGE.

We have already had the pleasure of referring to the Glasgow and West of Scotland Technical College, that excellent institution which promises to be, if, indeed, it is not already, the largest of its kind in the British Islands. About two months ago the writer had the privilege of being shown over the part of the new building (of which the King laid the foundation stone in the summer of 1903) which nears completion. And so far as a non-scientific spectator may judge

The Bank of Toronto.

Toronto, 13th October, 1905. General Manager.

it is admirably adapted for its uses. To a certainty it is a durable and splendid structure. What occasions the present writing is the receipt of the nineteenth annual report of the governing body of the college, submitted at a meeting held on the 19th September last. But it is to be said that this college is, inter alia, a continuation on a grand scale of the work of Allan Glen's institution, established very many years ago. The Board of Governors is chosen from a very wide constituency and the list of professors, lecturers, and assistants, is a very formidable one indeed. There are 5,671 students in the year 1904-5, an increase of 340 over the previous year. Among them are no fewer than 118 university graduates who supplement their studies by instruction here. To show how generously Glasgow and its neighborhood supports an enterprise like this, truly national in its benefits, we may say that subscriptions to the building and equipment fund now stand at £209,763 sterling—say $1,048,000—from 720 individuals, firms, or industrial associations, included in which list are some noble bequests. After the lamented death of the chairman of the governors, Sir John Neil Cuthbertson, some months ago Mr. Wm. Robertson Copland, M.I.C.E., was elected to succeed him. Mr. Copland has done yeoman's service for the college these many years, and the splendid subscription list is in large part his work.

* * *

MINING NOTES.

Professor Ingalls, the New York mining engineer and authority on zinc, has now started his investigation into the zinc deposits of British Columbia. Special experts have been at work for some time surveying areas where zinc is known to exist. Professor Ingalls expects to master the details of their reports, and then give attention to the economic treatment and transportation of ores, also to the possibilities of establishing a profitable industry. A number of one hundred pound samples of zinc ore will be shipped to Denver, where a modern plant exists, in which various processes of concentration will be tested on a commercial scale.

Dr. Eugene Haanel, superintendent of the Mines Department of the Department of the Interior, speaking of the future possibilities of the mica fields of Canada, says the outlook for the production of a large tonnage is very bright, and if Canada should ever be called upon to furnish the world's supply, the mica fields of Ontario and Quebec could be prepared for such an emergency. Referring to asbestos, the Doctor says this country has become master of the field of export. The United States has so far been the largest buyer, while England, Germany, France and Italy, and lately Russia, buy large quantities of the crude and some of the better classes of fibre. The industry began in 1880, when the value of exports was $24,700. In 1904 the output had increased to $1,154,566.

* * *

BETTER COUNTRY ROADS.

Since the Good Roads Convention at Brockville in the summer, the idea of improvement of the highways appears to have been simmering in the minds of the residents of Eastern Ontario. We now learn that almost the main business transacted at the October session of the united counties council of Stormont, Dundas and Glengarry, closing on Friday last, was the formation of a counties road scheme, to take advantage of the Ontario Government grant to assist the good roads movement. These three are the easternmost counties of the province. Acting upon the reports of special committees appointed for each county, the counties council designated about 190 miles of roadway in the three counties to be improved as counties roads, and upon these permanent work will be done unless the municipalities object. The various township councils have the option of accepting, rejecting or amending the proposed scheme within the next three months. If one-third do not accept the scheme, it will go to arbitration. The Montreal Gazette learns that Stormont county designated about 55 miles, Dundas between 50 and 60, and Glengarry about 90 miles. The counties council has passed a memorial asking that the cost of building counties roads in each county be charged to that particular county. They further decided to memorialize the Government in favor of a four-foot sleigh in Eastern Ontario, after December 1st, 1906. A memorial to the Ontario Government was also passed favoring a two-year term for all municipal councils. This last proposal is in line with the views of various county councils in the province. It is deemed to foreshadow an economy of time, money and effort.

* * *

—A meeting of several prominent leather manufacturers took place this week at which it was decided to advance prices on all green leather one to two cents a foot, and, should the price of raw stock be maintained, a further advance in the near future is understood to be quite likely. It was further decided to sell these goods at a price of so much per ounce to the square foot (ounces to be arrived at by the standard gauge, and not by weight), and to do away with the old classification under which leather was sold as "light," and "light medium," etc., which created more or less dissatisfaction.

* * *

—The city of Moose Jaw, in the North-West Territories, some little time ago, launched upon civic improvement on a considerable scale, intending, it is said, to expend $150,000 to $200,000 in directions indicated by the rapid growth of the place. It issued debentures quite recently in two lots, namely, of $6,000 and $38,500, and upon asking for tenders received the following, viz.: From Wood Crunday & Co., $46,336, and accrued interest; from J. M. Holmes, Chicago, 95 per cent. of face value; Canadian Securities Co., Toronto, $45,195, and accrued interest; G. A. Stimson & Co., $45,551, and accrued interest; Union Bank of Canada, Moose Jaw, $45,278.75; W. C. Brent, $45,038, and accrued interest; National Trust Co., $46,411, and accrued interest; Æmilius Jarvis Co., $46,501, and accrued interest. This last tender, we are told by Mr. Simpson, the secretary-treasurer of the city, was accepted at a special meeting of the council last week.

* * *

—The negligence of merchants in the matter of paying up small balances due is one of the annoyances of business life. Many complaints of it reach us. And this week we encounter an instance which will serve to point a moral. An advertiser in remitting us months ago for his card sent too little money, leaving a balance of $2.80 due. For this trifle we wrote, and wrote, without getting any satisfaction. At last the trifling matter was put in the hands of a collector and this week we receive the amount, with an apologetic note. But the remitter takes no account of the percentage we have to pay the collector, nor of the postage we have repeatedly paid: these come out of our pocket, and unjustly so. To say that such disbursements are trifles and that anyone may be glad to get paid in full by paying a little commission, is no sufficient reply. Transactions of this kind, large or small, are entirely unbusinesslike and leave a sting behind them proportioned to the time they have taken to collect or the trouble they have caused.

* * *

—That it is quite possible for an industry to over-reach itself to its own detriment is indicated by the action of the coopers. Two years ago or thereabouts the price of barrels was pushed to an outrageous extreme, in many cases being doubled. The result was great inconvenience to all users of barrels. Not only this, however; the shoe was also on the other foot. Apple packers began to take up the idea of packing in boxes; cement manufacturers began to ship in bags, and salt and sugar men did likewise. Cooperage manufacturers therefore were face to face with a constantly dwindling market for the product of their several plants. Barrels, however, have several advantages, and now the manufacturers think they see a way towards regaining their lost position. They propose to incorporate a joint stock company with a capital of $100,000, and by running the business thus more economically, be able to reduce prices to consumers, as well as ensure a fair profit for themselves.

The Merchants Bank of Canada

Notice is hereby given

That a dividend of 3½ per cent. for the current half year, being at the rate of 7 per cent. per annum upon the Paid-up Capital Stock of this Institution, has been declared, and that the same will be payable at its Banking House in this city, on and after

Friday, the 1st Day of December next.

The Transfer Books will be closed from the 16th to the 30th day of November next, both days inclusive.

The Fraser River Lumber Company's shingle mill at New Westminster, B.C., was destroyed by fire at a loss of over $12,000, with insurance of $7,000.

Mercantile Summary

A man named K. Goldberg, formerly a peddler, began last year in Montreal "to keep store" as a retailer of boots and shoes. He has just assigned, and shows an indebtedness of about $2,300.

In a fire at Port Elgin, Ont., on the 31st ult., A. McLean's general store, Mitchell's millinery store, and Hessanaur's blacksmith shop and salesrooms were burned. The loss is partially covered by insurance.

Ovide Aumais of Montreal bought the insolvent stock of G. Prudhomme at 60 cents on the dollar about the beginning of 1905, and started in business. Already he is reported as in the hands of the assignee, with liabilities of from $4,000 to $5,000.

Apparently Mr. J. Holiday of Dewittville, Quebec, for many years postmaster at that village, and doing a moderate general business, has been suffering from a gradual rusting out process. He has been reported slow pay for some time past, and is now trying to arrange with his creditors to compromise at 75 cents on the dollar.—J. O. Cuillerier, who was long a hotel keeper at Cedars, Quebec, and for the past twelve years also keeping general store, is reported insolvent. It is said his habits have for some time past not been conducive to success.

A Vancouver paper states that Mr. R. W. Douglas of Boston, representing extensive lumber interests, is arranging for the shipment of four hundred cars of British Columbia shingles for the Eastern market. This would amount approximately to 80,000,000 shingles, which is more than three-fourths of the entire present output.

The White Star liner "Cufic" recently arrived in Melbourne with what is styled the largest cargo in quantity and value which ever left New York direct for Australia. The quantity was 12,000 tons of general freight, valued at over $1,500,000. In view of recent advances on freight rates from New York to Australia, which was influencing the local makers in both heavy and bulk lines, it would appear to be more than ever important that Canadian exporters should secure the lowest inland freight from the factory point upon shipments, to beat New York.

The "promoted" farmer again; this time the tired merchant, Jules Brisson of Ste. Blandine, Quebec, formerly a farmer, and for three recent years past keeping a general store, has put his affairs into the hands of V. E. Paradis, accountant, Quebec.—L. Lasnier, for seventeen years a journeyman harness-maker at St. Johns, Quebec, and who three years ago succeeded his late employer, has been obliged to assign.—A. E. Lachance, general dealer at Sherbrooke, Quebec, lately reported embarrassed, is said to be offering 40 cents on liabilities of about $5,000.

The latest contributors to the failure list from the Province of Nova Scotia are as follows:—A. H. McDonald of Mulgrave began business last spring as a provision dealer, and has already assigned.—C. A. Forbes, general dealer, Barrington, whose affairs have been in unsettled shape for some months, is reported as offering his creditors 40 cents on the dollar.—A hotel keeper at Halifax, R. P. Helsby by name, has assigned, as also has J. W. Stairs, a lumber dealer of the same city.—S. G. Copp, a lumber dealer at Amherst, has assigned to A. B. Etter.

An assignment has been made to the court by A. N. L. Chamberland, doing business at Montreal as a dry goods retailer under the style of Chamberland, Trahan & Co. It is reported that Mr. Chamberland was unsuccessful some time ago in a similar business in the country, and for some years subsequently was engaged as a life insurance canvasser. Last July, apparently fascinated, he again decided to try his fortune in the dry goods line, taking the premises of one, J. B. Trahan, who had become insolvent. His venture, as it will be seen, has proved a short lived one, and he is said to owe sums of $13,000.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST. EAST TORONTO.

Mercantile Summary.

A dispatch from Brandon, Man., says that the Mutual Binder Twine factory at that place has been sold to another company for $15,700, and operations will be continued.

The Stork block of buildings at Brampton, Ont., was burned on Friday last. The Stork dry goods stock was destroyed, and so was that of T. Taylor, flour and feed merchant, Ritchie's shoe store was gutted.

The Polson Iron Works, Limited, Toronto, on Tuesday last, launched a hydraulic suction dredge named the "Northumberland." Her length is 147 feet beam, 44 feet depth, 9 feet at side, draft 5 feet, and it is said to be capable of dredging in 40 feet of water.

The tonnage of ore shipped from Rossland district for the week ending 28th inst. was: Le Roi, 1,650; Le Roi, milled, 210; Centre Star, 1,630; War Eagle, 1,050; Le Roi II., 60; Jumbo, 100. Total for week, 4,700 tons, and for the year, 270,964 tons. For the year up to date Le Roi has shipped over 100,000 tons, of which 97,000 tons was raw ore sent direct to the smelter. The total shipments for the whole camp up to date this year have been 276,663.

Recent failures in the Province of New Brunswick are noted as follows, F. A. Beckwith, dealing in meats and provisions at Harvey, has assigned with liabilities of about $2,000, which he would like to compromise, if permitted, at 20 per cent.—A small lobster packer at Botsford, L. T. Allen by name, is reported insolvent. His liabilities are not estimated to exceed $1,500.—P. A. Smith, a St John fish dealer, has assigned, owing about $2,000 altogether locally.

H. T. Graham, of Tabusintac, formerly employed with a large lumbering concern, and who engaged in a small general shoe business three or four years ago, has assigned, owing about $3,000.—C. B. Drake of Four Falls, who only engaged in storekeeping last fall, has been unfortunate in being burned out several weeks ago, with insufficient insurance, and it is reported he is seeking some compromise indulgence from creditors. His liabilities are figured at $3,000 to $4,000.

The following is a list of Canadian patents recently granted: A. Fairgrieve, Toronto, ceiling and floor plates; W. Bently, Toronto, frame structure; R. L. Crain, Ottawa, multiple writing pad: R. J. Warminton, Montreal, nozzles for pouring liquids; R. N. Walker, Ottawa, composition of matter for roofs; C. C. Knight, Sherbrooke; E. A. Davis,, Cookshire, Quebec., abdominal belts; B. B. Jenkins, Toronto, car fenders; A. L. Pouliot, Montreal, beds; W. H. Russell, Douglastown, N. B.; T. D. Delahey, Pembroke, cream separating machines; G. N. Fox, Montreal, cigar tip perforator; J. Dulait, L. Rosenfeld and F. Zelenay, electric railway systems; Robert Maw, Montreal, car starting and stopping device.

A Change in the Trusteeship.

Whether of a Will, Marriage Settlement or Bond Issue, is a troublesome and expensive matter.

Where private trustees are appointed such changes are inevitable.

The Trusts Company alone enjoys continuity of tenure, fixity of residence and permanent records.

Mercantile Summary.

J. W. Oldfin, a plumber and tinsmith of Kingston, has assigned to J. W. Swift, of that city.

Large deposits of rock salt are said to have been discovered at St. Boniface, just across the river from Winnipeg.

The Dominion Government has erected a furnace at Sault Ste. Marie for the testing of Dr. Heroult's electric process for smelting ores and making steel by electricity.

L. C. Giguere, a Quebec hardware dealer, lately noted as insolvent, is now making a proposition to settle liabilities of $18,450 at 30 cents on the dollar, which would let him off cheap.

The Canadian Pacific Railway Company has sold its Steamship "Danube" for $30,000, to the British Columbia Salvage Company of Esquimalt, who will, aided by a Dominion bonus of $30,000, maintain her as a wrecking steamer.

A report comes from British Columbia to the effect that the Northport smelter, controlled by Great Northern Railroad interests, has been closed down, and that the entire output of the Le Roi mines will be sent to the C.P.R. smelter at Trail, where, it is stated, it can be treated more cheaply.

D. Real, who has been long in business at Merrickville, as a tailor and livery stable keeper, is reported as offering a compromise of 30 cents on the dollar. He had been found slow pay for some time past. R. Goldberg, in a small grocery way in Ottawa, has assigned to J. W. Chisnall.

At Lucknow, Ont., there was a fire last week which destroyed or seriously damaged several premises, including those of Miss McCall, milliner; A. Bennett, produce dealer; Mrs. N. L. Campbell, grocer; A. T. Davidson, furniture store, etc. The loss altogether is about $12,000, with insurance barely exceeding one half of that amount.

The Midland Railway Company, which holds a Manitoba charter, are having surveyed a route, from Portage la Prairie to the International boundary line. Negotiations are said to be progressing between it and the Canadian Northern in respect to an entrance into the city of Winnipeg over the old lines of the latter, using its local terminals. The new line probably will run by way of Roland and Carman.

The total quantity of coal taken from the mines of the United Kingdom last year, according to a late estimate, amounted to 232,428,000 tons, or over 2,000,000 tons in excess of the year 1903. The value was $20,000,000. More was sent abroad last year than in any previous year, the total reaching 65,822,035 tons, of which 46,255,547 tons actually were sold to other nations, and the remainder used for shipping. Germany, France and Italy each carried off 6,000,000 tons and Russia 2,000,000 tons.

PORT ARTHUR & FORT WILLIAM.

Post Office ddress. — — Port Arthur, Ont.

Mercantile Summary.

The Michigan Central Railway, it is understood, is to be extended from Edy's Mills to Dawn, thus giving the people of the latter place connection with Sarnia.

N. A. Meyer, of Granby; J. Wolferstan Thomas, manufacturer, of Montreal, and others have formed a company to manufacture boxes, labels, and wooden articles of all kinds, and buy and deal in timber rights.

The Colonial Cordage Company, Limited, Toronto, has been granted a Dominion charter, with the object of manufacturing, buying and dealing in rope, cordage, twines, oakum, etc. The capital stock is placed at $50,000. J. R. Converse, of Montreal, is a charter member.

It is reported from Ashcroft, B.C., that the Cariboo Hydraulic Company's mine at Bullion has been sold to a New York syndicate, in which Messrs. Lugenheim and John Hays Hammond and others, well known in the mining world, are interested. The consideration is said to have been approximately $1,000,000. Work is to be started on a new ditch from Cariboo Lake to bring down to the mine a suitable supply of water.

The Dominion Government has granted a charter to the Alberta Portland Cement Company, Limited, with a capital of $1,000,000, and head office in Toronto, and having E. T. Malone and Albert Mearns amongst its charter members. As its name implies, this firm will make, buy and sell Portland and all kinds of cements, lime, plaster, bricks, tile, etc., also to mine for coal, pipe petroleum and natural gas and carry on the business of oil producers and refiners.

We have seen a number of testimonials to the satisfactory working of the Star Water Pressure Acetylene Generator, of which it has been said that it is absolutely without any open water seals or floating gas holders, and that it is as safe as a gas meter. A lawyer in Brussels writes saying that he has one installed in his house and it has given complete and entire satisfaction. "I have sixteen lights in my residence, and have found so far that it is cheaper than coal oil, and I would not exchange it for electric light or any other illuminant that I know of."

A cable from London, England, states that the directors of the South-Western Traction Company have authorized the surveying of a trolley line from London to Hamilton, to be operated in connection with the line from Port Stanley to London. It is understood the line will extend east to Thamesford, south to Ingersoll, and through Woodstock and Brantford. The estimated cost will reach $2,000,000. It is said to be the intention of the traction company to start work soon on the line which will reach Delaware, and all points along the old main line of the G.T.P. to Glencoe, and on the present main line to Strathroy.

"Contract Bonds insure completion of buildings."

We hear that the Rand Drill Shops at Sherbrooke, Que., are to be enlarged, the city paying part of the purchase price for the additional ground required.

It is stated that the Capewell Horse Nail Company, of Hartford, Conn., a concern which has several branches on this continent and in England, has taken over the controlling interest in the Maritime Nail Works at St. John.

It is stated that during the fiscal year ending June 30, this year, 52,323 applications for mechanical patents were filed in the United States Patent Office, and 30,236 patents were granted. The business of the office was the largest it has ever done in a single year, and the United States, it is claimed, maintains its rank as the most inventive country in the world. To December 31, 1903, a total of 758,523 patents had been issued by the United States, nearly half as many as had been issued by all other countries combined, and tens of thousands more than had been issued by Great Britain, Germany and France.

We acknowledge a copy of the Temiskaming "Herald," "representative of the Great Clay Belt" of Ontario, a lively weekly, of which one of the proprietors is Mr. James H. Brown, formerly a valued member of the Monetary Times printing staff. The editorial member of the firm appears to be made of good stuff, for he does not refrain from speaking out in meeting on municipal matters. New Liskeard, in New Ontario, is a novel community and a growing one, and the "Herald" is right in standing up for an equitable deal where the franchise of lighting the town and supplying water to it is proposed to be given to a firm on terms the fairness of which is questioned. The paper is published in the Cobalt district, where rich discoveries of silver have been made in the last year or two, and voices the opinions of the newly-formed "Temiskaming Mining Association" as to the Ontario mining laws and regulations, criticism of which is loud and strong. Judging from the "Herald's" editorial on the superabundant mud in the streets of New Liskeard, (in which it surpasses Haileybury we are told) and the roads around it, there is pressing need of road making machinery, such as has been offered the municipality. New Liskeard has already a town band, we observe, and last week a Farmers' Institute was formed for the district.

Factory, Brantford, Ont.

The Quebec Transport Company, Limited, capital $100,000, proposes to carry on a general shipping business and convey passengers, freight and merchandise, including mails, between ports in Canada and elsewhere, and construct and lease docks, elevators, etc. J. G. Scott and Wm. Power, of Quebec, are interested.

On Saturday last the Governor and Premier of Prince Edward Island, with other Prince Edward Island notables, took train and passed over the million dollar Hillsborough Bridge and forty-four miles of the new Government railway to Murray Harbor in that province. It was a satisfactory trial. The formal opening of the bridge and railway was to be this week.

According to the Illustrated London News the proportion of injuries caused by vehicles in the year 1904 in Paris was as follows: By cabs and other horse-drawn vehicles, 2,704; by omnibuses, vans and trams, only 172; by motor car, 324; by bicycles 848. And figures from London, taken from the same source, indicate that where vans caused 2,157 injuries, cycles caused 2,132, carts, waggons and drays, 1,e774; cabs, 1,549; omnibuses, 470; tramcars, 292; motor cars caused only 142. The proportion of motor car accidents is therefore small.

Hon. R. P. Roblin, of Winnipeg; Mr. A. F. MacLaren, of Stratford; L. H. Marshall, of New York, and others, are interested in a scheme for erecting a factory at Chatham, Ont., to make twine from flax. The proposition, which is attracting much attention, is to build a $60,000 plant and employ at least fifty hands from the start. The company, which is to be known as the Canadian Cordage Company, Limited, of Toronto, capitalized at $250,000, is asking a loan of $35,000 for twenty-five years or the guarantee of bonds for a similar period. Considerable flax is already grown in the neighborhood of Chatham.

⁂

MONTREAL MARKETS

Montreal, Nov. 1, 1905.

Ashes.—Supplies are very light, with only a stock of about 30 barrels in store, and makers can realize very fair prices from $5.50 to $5.60 for No. 1 pots, or possibly more for good tares. Pearls would be worth from $7.50 to $7.75 per cental.

Dairy Products.—The exports of cheese last week showed a considerable falling off, having dropped to 53,155 boxes, and shipments of butter were also small, aggregating only 4,928 pckgs., but some considerable shipments have yet to be made before navigation closes three weeks hence. A firmer feeling has developed in cheese since last writing, which has been rather intensified by cables of yesterday, quoting an advance of 6d on white, and 1s. on colored. Fine Ontarios are quoted at 11⅝ to 11¾c., and 11¼ to 11½c. for fine Quebecs. The butter market is also steadier, 22½ to 22¾c. being quoted for fancy, and 22 to 22½c for fine to choice.

Dry Goods.—There has been more of a touch of Fall in the weather of late, and city retailers of dry goods, clothing, etc., report improved sales. In the country, however, stocks are reported as being comparatively unbroken, and, taking October as a whole, collections have hardly been up to those of last year. A very fair proportion of orders for spring lines of goods are being

booked. The week has developed nothing fresh in the way of advances in price, but those recently noted are firmly held.

Groceries.—Again we have to note a decline in sugars, an event which now appears to be of regular weekly character, and the weakness in European markets for raw beet stock seems to be unchecked. The factory price for extra granulated, in brls., is now $4.40, and in bags, $4.35, with No. 1 yellow down to $3.90; Paris lumps are $4.90, and powdered, $4.55. Apart from this there have been no very notable features in the trade. The second direct Mediterranean fruit steamer left Cadiz, her last port of call, on the 19th ult., and is due here about the 10th inst. The conditions in the tea market are steadily becoming stronger as the statistical situation with regard to stocks is more clearly recognized. The yield of China as well as Japan teas has been much smaller than usual, and it is figured that there is this year a shortage of twenty millions of pounds in the supply from the above sources.

Hides.—No advance in lambskins has been made, as is usual at the opening of the month, and dealers are still buying at 90c each. Beef hides are also unchanged on the basis of 11½ to 12c. per pound for No. 1.

Metals and Hardware—As the result of the trade meeting alluded to last week the following lines have been substantially advanced: Canada plates to $2.50 for fifty-twos; $2.55 for sixties; black sheets, $2.25 for 28 gauge; galvanized sheets, $4.10 for 30 inch; $4.35 for 36 inch; Ternes, $6.75; galvanized Canadas, $4 for fifty-twos, and $4.25 for sixties; boiler plate, $2.20; iron pipe. $4.29 for inch; sheet zinc, $7.75 to $8. Lead has reached the highest figure for some time, and is very firm at $3.85; copper, 17½ to 17¾c; tin, 36 to 36½c.; spelter very firm at 6¾ to 7c.; antimony, 14 to 14½c. Bar iron is now held at $1.85 to $1.90.

Oils, Paints, Etc.—The volume of business in these lines is well sustained. In values there are few changes. Linseed oil still rules easy, raw being quoted at 42 to 43c, and boiled at 46c for ordinary lots. Turpentine is firm at 98c. Cod oil is a little firmer, owing to light supplies, but the demand is really light. Of whale oil there is a plethora. Castor oil, for mechanical purposes, is quoted at 7 to 8c. per lb., as to quantity. Some moderate lots of window glass are coming forward, but there is still much difficulty in filling orders, and prices are very firm. Ground white lead is quoted at $5.25 to $5.50 for pure; putty, $1.40 in bulk.

Wool.—Business in raw wool is of a slow order, millmen only buying to fill present needs. Prices, however, are stiff, and we quote medium capes at 17½ to 19c; fine grades of B. A. scoured, range up to 45c; domestic fleece, 28 to 30c; ditto pulled, 30 to 32c; North-west, 19 to 21c. Of Australian there appears to be none here.

TORONTO MARKETS.

Toronto, Nov. 2, 1905.

Dry Goods.—There has been a large visiting list to Toronto owing to the Thanksgiving holiday, with the result that many out-of-town merchants have seized the opportunity of being in the city to place needed orders. The change to more seasonable weather, too, has resulted in brisker enquiry for the heavier lines of goods needed at this season of the year. The situation in staples is strong. Raw cotton has become rather unsettled, but even so, manufacturers' prices are barely on a parity with them at their lowest quotations, and the recognition of this renders a decline very unlikely. Woolens are becoming constantly stronger. In hosiery at the moment this is particularly evident. Travellers, while they have not done much during the past week owing to the holidays, report all the indications as being favorable. Payments are considered satisfactory.

Flour and Grain.—The tendency in both the flour and wheat branches of the trade is upward, owing to a firmer trend of the British market. Deliveries of grain are large. Shorts is quite firm, and bran somewhat less so. Oatmeal has made no change.

Groceries.—Another 10c. decline in all grades of refined sugars took place two or three days ago. The New York market also continues weak. In most other lines of general groceries the movement is described as fairly brisk. A good many out-of-town retailers seized the opportunity of cheap holiday rates on the railroads to place their orders in person. They report very satisfactory prospects for the fall trade. Payments likewise seem satisfactory. The demand for canned goods is quite brisk at the prevailing fair prices. The enquiry is increasing too, for dried fruits.

Hardware and Metals.—Shelf hardware is a branch which is keeping merchants busy these days, and this condition bids fair to continue well on to the close of navigation. All the seasonable articles are in good demand. Building tools are still in request. There seems to be some scarcity of cement, and prices are inclined to advance. Skates, guns and ammunition are features. In heavy metals, the movement is quite satisfactory. The demand for pig iron and steel products at profitable prices continues unabated.

Hides and Leather.—While the prices of several grades of leather have gone up, those for hides have gone down. In the case of the latter the dealers recognized the fact that through overcompetition they were paying altogether too much, so they got together and brought prices down to a more reasonable basis. They would appear to be quite sufficiently high even now, however. As to the business being transacted in both these products, not much change is to be recorded since last report.

Provisions.—Receipts and demand for butter seem to be about on a par, and the market preserves a steady tone. The recent decline in cheese has brought renewed enquiry from across the ocean, and a steadier feeling prevails. Eggs are firmer. Poultry is plentiful, and has sold at middling fair prices during Thanksgiving. In hops there is not a very steady feeling. Canadians have sold from 15 to 18c. Prices in smoked meats retain their strength.

In Planning Your Fall Expenditure

do not forget that the surest way to protect the profits of a good year is by investing a fair proportion of the surplus in Life Insurance.

It is about the only investment always worth its face value. The Great-West Life offers such Insurance on unusually attractive terms.

Mercantile Summary.

Dr. McWilliams, of Thamesford, and others, are working on a project to start a peat pressing plant near London, Ont.

Mr. W. G. Lawson, representing the "Financial Times," of London, left on Tuesday to write up the Cobalt mines from the standpoint of the British investor.

A report is going the rounds to the effect that a heavily capitalized company is being organized to employ a very large number of hands in Toronto in the manufacture of railway rolling stock. Whether this report be actually based on fact or not, there is no doubt that something of the sort is quite likely in view of the very extensive railroad development which is sure to take place in Canada during the coming few years.

Mr. F. W. Morse, of the Grand Trunk Pacific, announces that that system will be made to touch at many important centres of the west. Branches will be built to Brandon, Regina, Calgary, and likely to Prince Albert, simultaneously with the construction of the main line, as soon as the latter reaches the point of junction. As a result the company expects to have an effective system in operation to compete for all the trade incoming and outgoing from the time the line is opened.

A letter written from Banff, Alberta, on October 25th, describes the delights of out-door life there when the weather if fine. Indeed, the writer says: "We drive or ride horseback, or walk every day, and we have our swim and our row on the beautiful water. This is the place for a business man to get rest and change. * * * But the weather here at this season of the year changes every few hours. Sunshine—snow; sunshine—rain; then sunshine; snow and rain and all at one and the same time. It is simply wonderful. And how grand the scenery! No good my trying to describe it."

The Canadian agent at Melbourne, Australia, Mr. D. H. Ross, says that at the annual show of the Royal Agricultural Society at Victoria in September there was a splendid display of Canadian carriages, which all sold at high figures being principally purchased by country visitors. There was also an exhibit of high class Canadian furniture which attracted great attention. Five rooms were fitted up entirely of Canadian products in order to give Australians an idea of what could be done by the furniture manufacturers of the Dominion. There is an increasing demand for Canadian agricultural implements, chairs and rubber boots.

Three Rivers, Que., will have a fine addition to its shipping facilities when the Government wharf, of which some 700 feet is constructed, shall be completed by Randolph MacDonald & Co. A special despatch to the Montreal "Gazette" from that city says that some 3,500,000 logs have been sawn up by the mills in that district during the season now closing. Of this number about 2,000,000 have been sawn by the Three Rivers mills. The remaining 1,500,000 were sawn by the Grand Mere and Shawenegan Falls mills. About 2,500,000 logs of last winter's cut remain undriven in the Upper St. Maurice and its tributaries. It is estimated that some 5,000,000 logs will be made on the St. Maurice river during the coming winter.

CONSUMERS' GAS COMPANY

The annual meeting of the Consumers' Gas Company was held in Toronto on Monday last. The total receipts from gas rentals during the past year amounted to $1,006,421, or an increase of $100,512 over the year previous.

The net income from operations was $412,252, compared with $268,348 in 1904, an increase of $143,904. Dividends absorbed $219,927, an increase of $28,776; $170,891 was transferred to renewal fund, and $20,459 profit carried to reserve fund. The output of gas for the past year amounted to 1,374,114,000 cubic feet, being 141,153,000 over that of the previous year. During the year nearly 15 miles of new mains have been laid, making the total mileage 302, and 3,406 new services have been put in.

The expectation was expressed by the President, Mr. G. R. R. Cockburn, that the new gas holder with a capacity of 3,000,000 cubic feet, will be finished this season and will afford ample storage room for the rapidly increasing demand during the winter months.

The plant and buildings renewable on October 1, 1904, was $424,255; $185,623 was spent during the year on repairs and renewals, and $170,891 added to the fund from earnings, leaving the total on October 1, 1905, $409,522. The reserve fund totals $973,155.80, having increased $21,853 during the year just closed.

Some particulars were given by the President, from the Company's point of view, as to the consumption of gas in Toronto and as to the possibilities of still further reducing the price to the consumer. It was pointed out that Toronto uses annually 200,000,000 feet more gas than Montreal, with a population 60 per cent. larger. The mayor of the former city had argued for a reduction in price, but he (the President) would call attention to the fact that a reduction of 5 cents would mean a diminution of the Company's income of $60,000, which he considered at the present time it would be scarcely safe to do.

The following figures, presented by Mr. Pearson, the manager of the Company, illustrate the growth of the city: In 1855 the output was 22,000,000 feet, 1,119 meters, 23 miles of mains, price $3. 1865, 30,014,000 feet, 1,188 meters, 41¼ miles of mains, $3. 1875, 100,122,000 feet, 2,508 meters, 66 miles of mains, $2.50. 1885, 273,484,000 feet, 6,778 meters, 126 miles of mains, $1 to $1.25. 1895, 614,553,000 feet, 20,626 meters, 227 1-3 miles of mains, $1.05. 1905, 1,374,114,000 feet, 39,711 meters, 302 miles of mains, 80c.

In the whole period named, that is, from 1855 to 1905, the per capita consumption of gas increased from 302 to 5,496 feet.

The following were elected directors for the ensuing year:—A. W. Austin, J. L. Blaikie, A. H. Campbell, Jun., W. Mortimer Clark, K.C., LL.D., George R. R. Cockburn, M.A., Wellington Francis, F. LeM. Grasett, M.D., James Henderson, M.A., D.C.L., John Hoskin, K.C., LL.D., D.C.L., Thomas Long, E. B. Osler, M.P., Andrew Smith, F. R. V. C. S.

At a meeting of the directors held subsequently, Mr. George R. R. Cockburn was elected President and Mr. J. L. Blaikie, Vice-President.

THE PROGRAMME OF THE GRAND TRUNK PACIFIC.

It is of some importance to notice that the President of the Grand Trunk Pacific Railway, Mr. Charles M. Hays, in speaking to a Montreal "Gazette" reporter on Tuesday last, distinctly denied that the company had any interest in a certain "Grand Trunk Pacific Land Company," which a recent cable tells us has been incorporated in London. Or if the English officials had anything to do with the venture he (Mr. Hays) has been advised of nothing of the kind. Be this as it may, the opening of a new channel of transportation across the continent does not imply alone the laying of steel rails and the running of trains. It means a wholesale expansion of business in every line, the birth of new industries and the extension of old ones. And so it comes about that the management of the Grand Trunk Pacific will not confine themselves to

railroad business pure and simple, but will attend to steamship lines, cable and express service and so forth, as occasion shall show they are warranted. Another point on which Mr. Hays made a statement of a definite nature was as to the establishing of hotels along the line. "Yes," said the President, "it is our intention to erect hotels wherever they will be a paying proposition, and incidentally he expressed admiration at the manner in which the C. P. R. had brought a chain of hotels up to a paying standard. Hotels then will be built by the Grand Trunk Pacific, at the larger terminal points as they may be needed.

Asked as to his opinion on the development of trade by way of the Pacific coast, Mr. Hays replied that trade and commerce are always seeking new markets. The western coast had of recent years made wonderful development, because trade had grown between both Canada and the United States, and Australia and Asiatic countries. Canada was sharing in this business and consequently in western coast development, but with the open door in Japan and China, we would see in those nations a demand for Canadian products, and manufactures also, which will make the current of traffic across the Dominion as voluminous to the western ports as it was to those of the Atlantic coast."

The question "Will you grade through the mountains and your terminal facilities at Kai-En Island offer advantages in the direction of trading facilities?" The reply was that that would be the result. "The mountain section of the road will have a grade of 1 per cent., or 52 feet to the mile, and the port which has been chosen extends every inducement for commercial operations and shipping enterprises. The company will have terminals there to meet all demands of business," said Mr. Hays.

NEWS ABOUT TEXTILES.

Advances are expected in burlaps, says a New York report; indeed, before long they may go very much higher.

Extremely optimistic reports are current in the linen trade in the United States, regarding the advance business booked for spring. Dress linens, damasks, crashes, towels, napkins, glass cloths and other housekeeping lines have all been heavily ordered, the prices paid in a good many instances showing advances.

Reductions have not been altogether stopped, and, as a result, buyers of raw silks are very conservative in their operations. More or less buying has been reported in certain of the producing markets, but evidently this has not been sufficient to check the irregularities. Those who have sold short have evidently seized the opportunity to cover, but their operations have not been extensive enough to harden the conditions sufficiently to warrant the statement that the market had reached its lowest ebb.

The demand for small furs has increased enormously this season in New York and other American centres. There are many reasons for this confidence in furs, among which is that costly furs are in vogue, and that the masses will demand something that is in accordance with the decree of Dame Fashion. A great deal of the success of the present vogue for fur because it is so becoming. Women will wear a fur tippet or scarf when there is no necessity for wearing it for warmth; they know that it adds to the toilette and softens the contour of the face.—Dry Goods Economist.

Reports are beginning to arrive on this side from importers who are now in Europe, preparing for next season. So far, it appears, nothing startlingly new or original, has developed. The Nottingham market, has little to offer in the way of novelty. Prices remain at practically the old level. Most of the importers will return to Nottingham later, when they may be able to discover something new. A few samples of Nottingham lines have already arrived in the market. Novelties are conspicuous by their absence. There is the same line of Vals., torchons, and so on, with a sprinkling of Clunys and other sorts. Some cheap numbers are also shown in Irish. Most of these goods are white, but it is worth noting that a number of ecru goods are shown. These were brought out last season and met with a limited sale in certain quarters. It is evident that the trade thought well of them, otherwise they would not have tried the experiment of bringing them out again. In the cheap grades the square mesh prevails, practically to the

exclusion of any other form, but in the higher numbers some round-mesh goods are seen. The round-mesh style has attracted quite a little attention of late, and it is probable that it will soon be an important factor. At any rate, it is a change from the square-mesh style which has ruled so long.

⁂

A LIFE ON THE INLAND WAVE.

The melancholy loss of life and property on the Great Lakes of North America by reason of the violent storms of last month, makes up a bitter page in the annals of our inland water transportation. We gave a week ago a brief resume of the 29 vessels wrecked, and some 40 lives lost in the gale of the 20th and 21st ult., on Lakes Superior, Michigan, Huron and Erie. The fury of the wind and the wide sweep of the storm were unusual, and felt indeed over the whole chain.

Opportunely we receive, closely after this storm, a letter from a mariner who recounts, from his prison in a light-ship some of the dangers of the deep and some of his individual experiences. The letter is dated "South East Shoal, Lake Erie, November 1st."

You want to know how we are situated out here. Well, we are on the Shoal, 4½ miles S. E. of the old Point Pelee Light, a shoal formed since your day; eight miles from Point Pelee and ten miles from Pelee Island, right out in the open lake, and with any easterly weather we simply get hell this time of

year, as there is the whole sweep of the lake, that is two hundred miles, for the sea to make, and by the time it reaches us it is big enough and wild enough, I can assure you. We had a breeze from the N. E. last fall that attained a velocity of 78 miles an hour. All the big modern steel boats had to turn back to Buffalo that time and several were lost, but we couldn't run anywhere, we had to stay here and take our medicine, and it was a nasty dose for twenty-four hours, but we came out O. K.. We have been here for five years and have not run for shelter yet, although we would often like to do so. In that last breeze of October 21st, the "Tasmania," a schooner of 1500 tons, foundered two miles from us. We were watching her from the lightship at the time, but the wind was blowing 80 miles an hour so it was out of the question to think of going to the aid of the crew, and by daylight there were none of the poor fellows left to go to. There was a fleet of forty big modern boats in shelter under Pelee Island in that breeze, and sometimes we have 75 or 80 in shelter up in Pigeon Bay in an easterly gale.

We are in a little steam barge, 100 feet long by 24 beam, and look rather cheeky staying out in the lake in the teeth of it while a 500-footer is running for shelter. We are owned by the Lake Carriers and handled by Captain George P. McKay, whom I guess you have met, one of the finest and most reasonable men that ever managed a steamboat. We have a crew of four men, engineer, mate, cook and myself. I tell you a game of cards goes good in the summer months. Each man has five days a month liberty ashore, and it is fun to board any passing freighter from our small boat and sail up to Detroit river and get off with Duff and Gatfield at the Lime Kiln Crossing.

Lowest Expense Ratio

The Government Blue Book, just published, shows that

the Mutual Life Assurance Co. OF CANADA.

had for 1904 the **Lowest Expense Rate** of any Canadian Life Company, the ratio of "general expenses" to "income" being only **17.4 per cent.,** while the **average** of all the Canadian Life Companies for that year (as given by The Globe of 19th inst. is **25.47 per cent.**

There is the greatest bass fishing to be had on the Pelee Middle Ground that I ever saw. Two of us this summer caught 62 in an hour, using June flies for bait. This is a fine post for Roman Catholics, who can keep all the fast days easily and a few extras, as the fish don't cost a blessed cent. We catch as many again as we can use, and I wish I could send you a mess two or three times a week when the white fish are running.

F. J. H.

P.S.—Excuse pencil as we are tossing around at a great rate at present, and I have to hang on with one hand and both legs. F.

THE METROPOLITAN LIFE INSURANCE CO.

(INCORPORATED BY TH STATE OF NEW YORK.)

The Company OF the People, BY the People, FOR the People.

ASSETS, $128,094,315.24

Proof of Public Confidence

This Company has more premium-paying business in force in the United States than any other Company, and for each of the last 11 Years has had more New Insurance accepted and issued in America than any other Company.

The Number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto, Montreal, Quebec and Ottawa.

Significant Facts

This Company's Policy-claims paid in 1904 averaged in number one for each minute and a quarter of each business day of 8 hours each, and, in amount, $102.54 a minute the year through.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1904.

391 per day in number of Claims Paid.
6,561 per day in number of Policies Issued.
$1,426,700.50 per day in New Insurance Written.
$114,060.67 per day in Payments to Policy-holders and addition to Reserve
$73,326.8 Per day in Increase of Assets.

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave. New York City.

Amount of Canadian Securities deposited with the Dominion Government for the protection of Policy-holders in Canada, over $2,600 000.00

Canada Life's Total Business

Think how many people will benefit from the amount of insurance carried in the Canada Life.

At present the Company's total business is

Over $105,000,000.00

The Sun Life of Canada had a triumphant year. Impossible to give the increases in this space—suffice it to say that never has the Company's motto "Prosperous and Progressive" been so magnificently maintained. Ask for leaflet giving the Record of 1904.

THE INTERCOLONIAL RAILWAY.

A year or two ago in coming up from Montreal, the present writer asked the question of Mr. William Mackenzie, the well-known railway owner and contractor: "Can the Intercolonial Railway not be made to pay?" To this Mr. Mackenzie's reply was prompt. "Certainly it can; look at the revenue it has—over six millions. It is all a matter of management." Now here is Senator McMullen saying the same thing after a trip of investigation over the line. Of course we do not put this gentleman in the same category with Mr. Mackenzie, for the latter is especially well qualified by experience to judge of such matters. But it is significant to find both men saying practically the same thing. The Senator considers the road a good Dominion asset; "get the right man, put him in charge, and if carefully and economically operated under an independent head, absolutely free from political influences, it would pay all operating expenses, and contribute, in addition, a substantial revenue to the Dominion treasury." He has said much the same thing before but he has lately been over the Intercolonial main line and branches and has noted with care the condition of the road and the general system of operation, both as to its operating staff and the repair staff at Moncton. "The road is over-stationed between Moncton and Halifax, where the average distance between stations is three and a half miles, and this is virtually the rule on nearly the whole line. The operating staff is too numerous, the repair shops are over-crowded with workmen, many of whom have too easy work. . . . The schedule of freight rates is altogether too low." Further, he says what is very true, "these conditions cannot be got rid of under a political head, either Conservative or Liberal. We have tried both and both have failed. Put the road under an independent head, and it will show its earning power in a very short time."

What more is needed to convince the powers that be that political influence, divided management, violation of the commonest conditions that distinguish well-managed and successful railways, are to blame for the fact that the Intercolonial does not pay. Nothing more can be needed to convince, but much may be needed to get them to act. The road has always been too valuable as a political convenience to permit of its being made a paying asset. The people would have no objection to a change, but certain politicians and persons with a "pull" would object.

* * *

MINERALS AT COBALT.

Opinions expressed by visitors upon the mineral value of the Cobalt district of Northern Ontario have varied a good deal, according as visitors remained there a long or a short time, were accurately or incorrectly informed, or not being experts were disappointed at the non-existence of conditions they expected. These considerations will account for much divergence in the accounts about this region, of the character of its deposits and the future importance of the camp. The latest expression we have seen on the subject appears in a letter of October 28th to the Globe, written from New Liskeard by Mr. S. R. Clarke. He suggests that the green stone of Keewatin age found adjoining the conglomerate of an important mine is found to carry copper; and reasoning by analogy from developments in similar rock in Cornwall there may be close thereto other valuable metal. He states, however, that:

"The valuable finds during the past season are not very numerous. With the lure of the wonderful success at Cobalt before his eyes, the hardy prospector has scoured the country in all directions, and though some prospects have been located here and there which may eventually make paying mines, no new Cobalt has been found, that is, so far as present indications go, though there probably are a reasonable number of important finds to reward the industry of the prospector, and it may be that next year the value of this year's work will be better demonstrated.

* * * * * *

"The deposits are now valued almost entirely for the silver they contain, and the drop in the price of cobalt has little or nothing to do with the ultimate prosperity of the camp."

So far these views do not differ much in tone from our articles of September on the subject. But later visits by observant men cause us to think that, whilst properly cautionary, we were unwarrantably depreciative of the mineral value of the region. For example, the statement made that all the veins (at Cobalt) had "petered out" at a depth of from 40 to 50 feet—a statement practically repeated by Mr. R. G. Leckie in a letter to last Monday's "News"—was certainly too broad, for according to a recent letter from a man who has been on the spot it is seen that the large majority of the mines now in operation, some twelve in number, have not gone down over 20 or 25 feet, and "in the Larose mine, at a depth of 90 feet the vein is as perfect as when they first started to sink the shaft," while the president of that mine thinks there is ore enough in sight to keep the mine running for several years. And there are three other veins in sight running apparently across their entire property. "It is true," adds this letter, "that at the Trethewey mine the ore at 65 feet is of an inferior quality, but it is not uncommon to find these barren spots in a silver vein."

A word now as to the site of the camp. The discoveries made are mainly in the township of Coleman. They centre round the town-site of Cobalt and are practically within a radius of three or four miles. The geological formation is chiefly the Lower Huronian containing the cobalt series, consisting of conglomerate, breccia, quartzites and greywacke-slate. The cobalt-nickel-arsenic-silver veins occur in this series. There is also a considerable quantity of diabase and gabbro and some Keewatin, the richest silver vein which has yet been discovered being in the diabase. A man who lives on the spot and has taken pains to inform himself tells us that he believes every one of a dozen mines will be in operation during this winter, giving employment to between 300 and 400 men. None of the properties are being mined very deeply for the reason that there is plenty ore near the surface to keep the men employed in winter. From many descriptions given of the mines we choose the following by a man whom we know, who possesses technical knowledge and has visited the locality, but who has no reason to be biased:

> The ore is found in veins from two to ten or twelve inches wide running right to the surface of the rock, although the cleft to the depth of two feet or so is sometimes filled with black earth bearing free silver in small nuggets. Below this is the vein proper, consisting as a rule of cobalt and free silver intermixed. In some places nuggets of almost pure silver are found in the ore, whilst occasionally there are unearthed plates of silver, which have apparently been "pinched" out of the ore against the side wall. These plates, which are often about 75 per cent. pure, will ring like a salver when struck with the knuckles. At one mine I saw a vein two inches thick at the spot where it was being worked, which was asserted to be practically pure silver; in fact, the superintendent said that all that was needed to make it pass as current coin was the King's head. This vein has been traced on the surface a considerable distance, and a shaft 15 or 18 feet in depth has been sunk. This particular vein is at present (September) paying a net profit over all expenses of $1,000 a day, and the superintendent said indications were that he would continue to draw from that vein alone $1,000 a day for the next year. There are other veins on the same property which at present are not being developed; though of somewhat lower grade they are immensely valuable. At a claim near this we were shown a quantity of silver nuggets, some of them running to several pounds in weight. This property has been fairly well prospected and several veins discovered, but the surface has been hardly more than scratched.
>
> At another mine, which is just off the railway track a little north of Cobalt, a shaft has been sunk 90 feet deep and tunnels have been run about 110 feet each way at the bottom of the shaft. [This is the Larose mine.] At that depth the vein is, if anything, wider than at the surface, while the ore is as rich. Several other mines were visited but the same general description will apply to each. . . . No one has tested the depth of the more important veins, and no one can say to what depth they may extend. At nearly all the mines preparations are being made to work underground during the winter, and some of the owners are bringing in the necessary machinery now. As, however, the country is a tremendously rough one, steep precipitous hills and numerous small lakes being amongst its principal features, those who can are postponing the introduction of machinery until the winter.
>
> * * * * *
>
> What the true size and dimensions of the silver deposits may be is yet entirely unknown. I met several experienced miners who have been in every mining camp on the continent—Cripple Creek, Rossland, Greenwood, etc.—and mining engineers, some of whom had worked practically wherever any mining is done. One and all assured me most positively that the conditions in Cobalt are, so far as they are aware, absolutely unique; that geological or metallurgical knowledge is of but little use, and that their previous experience does not help them to infer anything regarding the extent of the deposits, the depth to which the veins may run, or the probability of still further rich discoveries being made in the district. Men who have reputations to lose will give no definite opinions. . . . This much is certain, that there are a good many million dollars in sight.

⁂

DEEPENING WATER COURSES IN THE LAKES.

For many years the United States Government has been spending large sums annually in deepening harbors and the connecting rivers of the Great Lakes to accommodate the modern freight-carrying steamers. Year by year these steamers have been built larger and larger, with deeper and deeper draught, until from an average of ten feet thirty years ago such boats now require from sixteen to nineteen feet of water to float them. The cry was "deepen, deepen, until every river and harbor on the whole chain of lakes will have twenty feet of water." And Congress has spent a score of millions trying to satisfy this cry. But no sooner was sixteen feet water produced by dredging and blasting than somebody would build an eighteen foot boat, and now that twenty feet water has about been reached Congress is besought to do still more in this direction.

At a meeting of the Lake Carriers' Association last week a demand was made for a new lock at the

Sault Ste. Marie rapids, and a duplication of the enormously expensive channel cut in the rock at the Lime Kiln Crossing in Detroit river. The insatiable demands of the Lake Carriers cause the "Detroit News" to speak its mind in the following way:

> The main point to be borne in mind, however, is that if the public has been submitting to the exactions of this organization in the past with the idea that its ambitions and demands would finally be satisfied, the time has arrived for waking from the dream. It has been demonstrated beyond doubt that, in the interest of dividends, [which is the other name for lower rates of transportation], the steel trust and its allies will interminably deepen the draught of its hold as often as Uncle Sam can be induced to spend more millions in digging out the bottom of the river. Practically speaking, the whole benefit of the millions on millions already expended now goes to a combination which, under tariff privileges, sees to it that the consumer has no share in the savings effected by governmental generosity, but absorbs to itself all the results of the economy effected by vastly expanded tonnage capacity. The demand is absolutely insatiable, the cost unlimited, and the benefits, while possibly proportionate, are, with the exception of an insignificant proportion, absorbed to a few. The only gratitude displayed by the combinations served is their lively sense of benefits to come.

The people of the United States have not, it is contended, reaped nearly as much benefit from all this deepening of the water-courses as the vessel owners have done, and these gentlemen may well rest and be thankful for the practical doubling of the depth of water in the harbors and connecting streams. So the "News" contends, and we think with force, that Uncle Sam might well devote a few years to more careful lighting and regulation of the channels already provided, thus increasing materially the safety and facility with which they are navigated, without inordinate cost to the nation which reaps such scanty rewards for its outlay. Persistent demands on the U. S. Treasury may result in naval engineers being sent from Washington to report more closely than ever before upon the various engineering schemes propounded, with a view to getting round the navigating difficulties of Detroit river and St. Clair river and lake. There is the project, pronounced feasible, to cut a canal from Lake St. Clair through the Tilburys and Romney township to Lake Erie. But this would get rid of Detroit river shallows alone. Another scheme, less favored, had it in view to connect Lakes Huron and Erie by a canal through Middlesex and Elgin counties. Then the proposed canals or water routes from Georgian Bay to Lake Ontario are by no means moribund schemes any more than the French River, Lake Nipissing and Ottawa river scheme, if we bear in mind, as we cannot but bear in mind, the probable future pressure of Canadian North-West grain eastward. It is well to recall, too, that a charter was applied for, but we believe not obtained, at the last session of Parliament by the Canadian Canals Corporation, whose engineer, Mr. H. C. Spalding, proposes to utilize a different route, what he calls the Isthmian Canal route, along the higher land between Lakes Ontario and Huron. This, he contends, has its advantages. In any case there should be a limit to the increase in size of carriers on the Great Lakes, just as there assuredly is a limit to the depth to which dredges can go in the connecting rivers. Reason and safety must soon call halt.

FIRE WASTE FOR TEN MONTHS.

The fire loss in the United States and Canada for ten months of this year is greater than that for the like period of any one of four years preceding, allowance being made for the conflagrations of 1904: $134,000,000 in 1901, $124,000,000 in 1902, and $125,381,000 for 1903 (ten months each) are surpassed by the $143,703,000 of this year. The fire losses for the month of October, as compiled from the "Journal of Commerce and Commercial Bulletin" records aggregate $12,267,000. The following comparative table will show the losses by months for the first ten months of 1903, 1904, and 1905:

	1903.	1904.	1905.
January	$13,166,350	$21,970,200	$16,378,100
February	16,090,000	90,051,000	25,591,000
March	9,907,650	11,212,150	14,751,400
April	13,549,000	23,623,000	11,901,350
May	16,366,800	15,221,400	12,736,250
June	14,648,350	10,646,700	11,789,800
July	12,838,600	11,923,200	13,173,250
August	8,428,350	9,715,200	11,435,600
September	9,939,450	14,387,650	13,715,250
October	10,409,800	12,866,200	12,267,000
Total ten mos..	$125,381,350	$221,426,700	$143,703,000
November	13,589,550	11,515,000	......
December	17,224,700	19,422,350	......
Total for year..	$156,195,600	$252,364,050	......

During the month just closed there were 282 fires of a destructiveness, each, of $10,000 or more. Twenty of these burned up from $100,000 to $200,000 each. In the opinion of the journal quoted, even in the face of these losses this year the fire insurance companies have fared exceedingly well because of the liberal rates they are now receiving, and, as a consequence, insurance stocks are very strong. It is likely that history will repeat itself and that rate wars in various sections may be expected toward the latter part of 1906.

* * *

THE FUR OUTLOOK.

While it is as yet too soon to prognosticate very surely the future course of events in the world's fur market, it may be averred that prices at present for all kinds of skins are the firmest perhaps in the history of the trade. The same tendency may indeed be seen in practically every line of commodity, and while at present there is nothing to show that such a thing is likely, there is little doubt that when values are at such an extremely high tension as they are, a very small unlooked-for hitch is liable to cause a slump.

As far as Russian stuff is concerned, such as lambskins, ermine, squirrel, marmot, etc., distribution has already taken place and nothing, therefore, can now happen to adversely affect the consumption. The close of the Russo-Japanese war has already had a good effect, and a considerable rise in prices has taken place since the purchases were made. Indeed, there would be no inconsiderable profit in shipping such goods back to Europe at the values now prevailing. The world demands fine Persians, and they are not in very large supply. The actual advance in the price of these skins may be placed at $1 per skin.

But in such computations as these discrimination is most emphatically needed; it is *good* skins which have gone up in value. The total crop of Persians this year was probably about 6000 bales, of which some 3500 were good and the rest more or less trash. They are in few hands, and prices are necessarily strong. At the same time these prices are already so high that caution is needed.

The lining trade shows some perplexing features, owing to the great advance in squirrels. Lining skins that sold last year at $18 are worth double that sum. Squirrel belly linings are now practically out of the market, but there are substitutes. In fact, all furs consumed largely in Russia, such as Australian opossums, etc., showed an increase in price at the London sales which proves practically prohibitive.

As for our own Canadian catch of skins, mink and skunk, etc., they are in good demand and they may be said to be safe at last year's prices. Retailers, it is true, who require such skins very badly, may give a little more, but such orders will be in small compass and will hardly affect the general market. Red fox is likely to sell at somewhat better prices than last year, but then no one wanted it. Good otter is wanted, but legal restrictions are in the way of a heavy volume of trade in this skin, and the same is to be said of muskrat.

The seal sales take place in December. So far, there is no very tangible indication as to how they will go, beyond the selling of Cape Horn seals in October last, when there was an advance of 25c. Northern seals, however, are likely to advance fully 15 per cent. over present prices. Racoon skins are not likely to change from the prices of last season. Black bear is completely out of the market, so far as demand is concerned.

The market for manufactured fur goods is very satisfactory. The question is how to have the goods in readiness to fill orders; the difficulty of getting skins made up is greater than that of getting the skins themselves.

* * *

A NEW RAILROAD ARRANGEMENT FOR EDMONTON.

Certain rearrangements recently made by the Canadian Pacific Railway with regard to "back shipments" affect the position of Edmonton as a distributing point very advantageously. When some years ago western freight rates were fixed by the railroads, the rate to Edmonton was made considerably higher than that to Calgary. The latter place had an added advantage in that its merchants were enabled, through the means of "traders' rates" on consignments from wholesale to retail firms, to sell quantities of goods in that section of country lying between it and Edmonton, nearly two hundred miles north. This traders' rate was also given for shipments back from or east of Calgary. Some short time after the establishment of the Railroad Commission and the consequent frowning down by that body of any discrimination in favor of or against a particular town, Edmonton demanded that she also be given the benefit of the back-shipment rate, as her merchants found a large part of their activity in supplying the towns south of her, in which business they came in direct competition with Calgary, whose merchants had that advantage. The Canadian Pacific Railway, however, refused the concession, and in order to clear itself of the charge of discrimination, withdrew the privilege which it had formerly granted to Calgary and Regina in this respect. Edmonton, therefore, reaped little advantage from the change, for while it was put on an equality with Calgary in some degree, yet the latter had a territory "forward" to draw upon which its northern sister had not.

Now, however, the C. P. R. Company, influenced apparently by the probability of competition from the Canadian Northern and the Grand Trunk Pacific, has changed its policy and now quotes an equal rate for Calgary and Edmonton, and allows for the latter point a back shipment rate for places as far south as Red Deer, which is about half way between Edmonton and Calgary. Regina seems also to be aroused to the necessity for gaining the same privilege.

* * *

LIFE UNDERWRITING.

It was to be expected that revelations of mismanagement such as are being made by the life assurance investigating committee at Albany would do injury to the business of the companies immediately concerned, and also by reflection to that of other life underwriting bodies. Indeed, some unjustifiable things have been said by certain United States newspapers which have had the effect of unsettling people's minds as to the desirability or even the safety of all or any life assurance. For such wild and undiscriminating suggestions there is no excuse, but their effect is none the less injurious because it is unjust. Restitution by companies of what they have unfairly taken from their policy-holders and punishment of officers who have connived at extravagance or dishonesty in management should be insisted upon; but it would be folly to boycott the companies which have been bled by ease-loving and money-loving vampires, and rank injustice to throw suspicion upon the whole life-assurance fabric because of the misconduct of a few.

An article on the American Insurance Situation in England is contributed to the current number of the "Business Man's Magazine" by Ernest Cawcroft. This gentleman, who writes from the standpoint of an American, discovered in a summer tour in the British Islands, "a deliberate attempt to poison the minds of the English masses against American methods and enterprises." He alleges this with respect not only to life insurance companies, but declares that the English leaders of business and English weekly newspapers "prompted by the envious minds of home insurance managers, are striking a bludgeon blow at the commercial activity of Americans in the Kingdom." It is perfectly plain from Mr. Cawcroft's article that he considers "American" methods of business the best in the world. Tolerably plain, too, that he is penetrated with the idea, so prevalent in the United States, that Great Britain is in her dotage, and requires, to rouse her, such tonics as the smartness, the "up-to-date-ness," the ruthlessness that characterize too many American business men. But he does not attempt to justify the mismanagement laid bare in the management of "The Big Three" companies. Properly enough he objects to newspapers and financial journals printing such paragraphs as these:

"Beware of American life offices; take out your policies in good English concerns," is the obvious conclusion of one article. The general conclusion of another may be quoted in view of the vital importance of the subject: "Whatever the ultimate result of this agitation this fact has been distinctly brought out, that the Government investigation in regard to insurance companies in America, which the American offices have hitherto claimed to be of a far more searching character than the Board of Trade requirements in this country, is a mere farce. Such a thing is not possible in Great Britain, and intending British assurers will be well advised in the future to place their business with one or the other of our well-managed British offices."

And then there are intimations that these questionable insurance practices are quite of a piece with other commercial practices which affect injuriously other classes doing business with United States houses. He quotes the formation of a Policy-Holders' Association, which recommends the following essential reforms:

First—The representation of British policy-holders on the board of directors.

Second—The mutualization of the company by the elimination of the stockholder.

Third—The investment of the company's funds in first-rate securities.

Fourth—The auditing of the accounts yearly by a responsible firm of British accountants and the issuance to policy-holders of the annual balance sheet.

Fifth—The distribution of the surplus funds amongst the policy-holders entitled thereto.

Sixth—The protection of the interests of the individual policy-holders.

As to the supervision of insurance the writer of the paper admits that the United Kingdom has already in practical operation the system which President Roosevelt demands and the one provided for in the bill introduced by Senator Dryden, the national regulation of insurance corporations, a most desirable thing, since, according to Superintendent Hendrick's report, American state control of life assurance is defective and misleading.

* * *

THE PLUMBERS' INDICTMENT.

That not only the architect and builder, but the general body of citizens, should feel a degree of satisfaction at the course events are taking in the matter of the plumbers' combine is easy to understand. Long-suffering has its limits, and while for months past the public probably had a vague idea that it was being over-reached, practically cheated, in its relations with the plumbing and steam-fitting branch of the building trade, it could not see exactly why the shoe was made to pinch so smartly. The evidence in the law courts of Toronto during the last few days shows pretty closely how the evil has been wrought, and shows it is high time such methods should be checked, or, seeing that the cases are still *sub judice*, that a most searching investigation is badly needed.

The substance of the charges in the indictments is unlawful combination and agreement to limit facilities for the supply of plumbers' goods, restraint of injury of trade by limiting the production of such goods, and by preventing competition in the manufacture or sale of them, and injury to other persons in the plumbers' trade who were not members of the association. Another indictment makes charges of fraudulently and deceitfully conspiring to defraud persons requiring steam-fitting and plumbing work to be done. It is said that the few plumbers outside the association are charged 20 per cent. more for their plumbers' goods than are members of the body, so that it is impossible for them to compete. And in numberless other ways the combine, it is alleged, has been enabled to take the consumers by the throat. The grand jury before whom the cases have been tried having returned true bills for conspiracy, it may be worth reciting how this is regarded by the courts. The Criminal Code considers it an indictable offence, and an individual is liable to a fine not exceeding $4,000 or two years' imprisonment, or a corporation to a fine of $10,000, and not less than $1,000 for conspiracy with any person, railway, steamship or transportation company. Conspiracy consists in efforts (a) To unduly limit facilities for transportation, producing, manufacturing, storing or dealing in any article or commodity which may be a subject of trade or commerce. (b) To restrain or injure trade or commerce in relation to any such article or commodity. (c) To unduly prevent or limit the manufacture of any such article. (d)To unduly prevent or lessen competition in production or sale of a commodity.

An illegal act done by one person cannot have such a far-reaching effect as that of a number of individuals or corporations. For that reason an act which when done by an individual would be merely illegal, becomes criminal when it is the act of a corporation.

* * *

AMALGAMATING MORTGAGE LOAN COMPANIES.

The proposals to amalgamate the Huron & Erie and Canadian Loan and Savings Companies of London, with a capital for the united companies of $5,000,000, of which $1,900,000 shall be paid up, have been agreed to by the boards of each and now await the sanction of the shareholders. While the directors of both are almost unanimous in approving the scheme, some particulars of which we have already given, there is opposition to it in one or two quarters, and a circular has been issued by the ex-president of the smaller company urging reasons against the step. He argues that it is wise to let well alone, getting six per cent. dividend as they do and having a 42 per cent. reserve. Also that on the basis of the existing reserve the shareholders of the Canadian should get more than the $132 for each $100 which they are to receive under the projected arrangement. Of course, the objectors ought to have a fair hearing, and nothing like arbitrary coercion of them should be permitted. At the same time it may be remarked with respect to the objection last stated that the shares of the smaller company do not bring in the open market the price which they should bring on the estimate of the ex-president, based upon the proportion of its reserve. They were selling at 122 on October 6th and went up to 128, at which they were quoted in several succeeding weeks, presumably as a consequence of the proposal of amalgamation. This is very different from the 142 they should bring on the theory that the amount of reserve governs their value.

On the other hand, there are considerations in favor of the amalgamation thus: Lessening the number of companies would decrease the competitive borrowing of deposits and debenture moneys and would also tend toward better mortgage lending rates by decreasing competition for loans. The expense of two head offices would also be saved—probably fewer clerks, certainly fewer inspectors would be needed. It is besides doubtful if the smaller companies of the kind can borrow as cheaply as a larger and stronger company. Although it is natural that its friends should not wish to see a financial institution sink its familiar name and in a measure lose its prestige by amalgamation with a larger one, still we cannot help thinking that the considerations we have mentioned, joined to the fact of the approval of the large majority of the officers and directors of both companies should have very great weight in favor of the proposal to unite. The interests of the smaller company appear to have been well guarded under the agreement.

ANOTHER ST. LAWRENCE DISASTER.

Yesterday's telegrams give a very different version of the stranding on Friday last of the steamer "Bavarian" in the St. Lawrence from that at first published. The first story was that the pilot was at fault for not stopping when a snow storm came on, that the officers blundered in not backing the steamer off at once instead of waiting till morning, and that the ship's back was broken, rendering her a total loss. Now, an official of the Allan Line, speaking of the "Bavarian," says her back is not broken, she is not irremediably damaged, she did not go ashore in a snow storm; the whole trouble was the displacement of a gas buoy from the shoal with no notification of its absence. Moreover, the evidence goes to show that the engines were reversed before the ship struck, and were kept full speed astern for long afterwards.

This intelligence affords great relief to many whose faith in the navigation of our Canadian ships might have been shaken by such allegations as were made of lack of judgment on the part of navigators. But the fact remains that five disasters to big sea-going steamers in the St. Lawrence in one season cannot but prejudice the reputation of the route. The enquiry into the stranding of the "Bavarian" should show who is responsible for the removal of that gas buoy near Grosse Isle. And if our pilotage system is so defective as is alleged, it cannot be put to rights too soon. It is very significant, however, that six of the large ships of the British Navy were this year safely taken both up and down the St. Lawrence without a pilot. The route, therefore, cannot be a bad one.

MONTREAL HARBOR.

It is satisfactory to hear that the receipts of Montreal Harbor show, up to the end of October, an all around increase over the figures for the same period in 1904. The revenue for the ten months was $260,079.10, which is $21,380 in advance. The month last past shows a remarkable gain, being $53,698, while the figures for October, 1904, were $39,934. The revenue is thus divided:—

	1904.	1905.
Imports	$146,000	$158,500
Exports	62,500	64,500
Local traffic	30,198	37,079

There has been a steady increase in tonnage for several years. The number of sea-going vessels that arrived in port from the opening of navigation up to November 1st, rose from 742 in 1904 to 759 in 1905; increase in tonnage was from 1,719,674 in 1904, to 1,759,639 in 1905. The corresponding figures for 1902 were 685 vessels, with a tonnage of 1,388,365; 1903 showed an increase also.

THE YONGE STREET BRIDGE.

The Canadian Pacific and Grand Trunk Railway Companies have made a proposition for the speedy construction of the Yonge Street bridge in Toronto on plans to be approved by their chief engineers, the city engineer and the Board of Railway Commissioners, the one-third of the cost to be borne by each of the companies and the city, and all litigation on the matter to be dropped. There would be, of course, as the railroad companies point out, several additional details to be taken into consideration, but these, they explain could be threshed out more satisfactorily after the general proposal shall have been approved. It is to be hoped that, whether this particular offer be agreed upon or not, the work of building the Yonge Street bridge be proceeded with as speedily as possible, so as to put an end to a fearful risk to human life at that point, which may find its victims almost any day. It is a disgrace that the matter has been allowed to hang fire for so long a time. At the same time, it may be well, while the proposal is under definite consideration, to bring up the whole subject of the relation of the railways to Toronto's water front. Many very necessary improvements are advisable and perhaps some far-reaching plan may be conceived better at this point of the negotiations than after this particular bridge shall have been completed, if, indeed, it ever reach such a stage.

THE FARM LIFE DOWN BY THE SEA.

It is an important subject which is being presented in an interesting way periodically by the Maritime Merchant, in the style of pointers for those wishing a career in Eastern Canada, or more strictly speaking, perhaps, the Maritime Provinces. In a late issue it took up the question of farming as a profitable pursuit more particularly for educated men, and it gives several very happy examples of what can be done in our beautiful provinces by the eastern ocean. It is desirable for people engaging in fruit farming [or any other kind of farming] in these provinces to have a little capital, to settle down to that kind of life, for they can get a better start than people without capital and, therefore, suffer less discouragement. An immigrant who goes out to the North-West without capital and receives a farm of 165 acres free may be very successful, and perhaps he is not to be blamed for yielding to the lure of the West. But there are more things to consider than simply the accumulation of wealth. Some cannot help pitying the man who toils on the prairies day after day for months and hardly sees a soul; for it is chiefly in the scattered settlements that free farms are given. Of course, if a man has capital he can buy a farm in a settled community and be near congenial society. But why not buy a farm in some beautiful and fertile section of these provinces, where he is nearer to congenial people than in the West. Here also is a rest for the eye, for we cannot imagine one not wearying of the everlasting flatness of the prairies. We do not mean to say anything disparaging of the West nor to deny the opportunities there: but we believe there is more that should attract a human sort of man in our long settled, if somewhat "slow" East. And if we could obtain the right kind of people possessing a little capital to undertake the kind of farming that appeals most to their fancy in our own eastern provinces it would result most satisfactorily both to the people themselves and to the country.

Of course, there have been failures. Many men even with sufficient capital have failed, and not only men who have come from across the sea, but men born and brought up in the country. But the men, and not the location, have been to blame. And where can you turn that you do not find failures! There is no reason, outside of his own personality, which, of course, is a very important item, why anyone should not succeed in agriculture in the well-favored parts of these provinces. And the life, while it has its hardships and its worries, is enjoyable. No man expects to earn his bread save by the sweat of his brow, and usually he earns it just as hard in any other occupation; if he is adapted to farming, he can earn it with probably less pain on the farm. Some kinds of farming are less trying than others to men of a certain constitution, and fruit-farming seems to be the favorite with many. The owner of a fruit farm must work very hard during the summer season, in order to cultivate to the best advantage; but during the winter months his duties are comparatively light, giving him time for rest, reading, thinking and planning. And among other pleasures of farm life, is the great joy of living in the open air, close to nature, and seeing things grow. Our contemporary knows a man in Kings County, N.S., who went into fruit-farming absolutely ignorant of farm work. He had to go into it for the sake of his health; he needed an out-door life. To-day he makes a net profit of $1,000 a year besides the most of his living, off a farm of 20 acres, a large portion of which is in orchard. And, while he was accustomed to a city life in all his earlier years, he says that he enjoys the life greatly and is exceedingly glad of the change. And there are many other city men who are making a success of fruit-farming and are happy in it. Agriculture, without a doubt, affords a career in Eastern Canada for many men, and when they take to the farm it will be a glad day for the country; for we need people to wrest wealth from our soil.

FIRE INSURANCE COSTS.

In ten years the losses of the stock fire insurance companies in the United States amounted to something like $18,000,000 in excess of the sum received in premiums. While, however, the greater proportion of the companies lost money, there were a few that prospered and paid good dividends. Mr. Edward Atkinson, writing on this apparently anomalous state of things, states that their losses have been about sixty (60) cents per year on each hundred dollars of insurance carried; their expenses about forty (40) cents, and their premiums were a little under one hundred (100) cents. Under these conditions they lost money. Whence their gains? They came wholly from their functions as bankers. Their capital, their previous surplus, in many cases large, and the use of the cash premiums for one year gave them an income as bankers of about sixty million dollars ($60,000,000) a year.

Can expenses be diminished? I once thought them excessive, but the expense account of the largest and best managed companies, worked with the utmost skill and energy, are thirty-three (33) per cent. of their premiums.

Can the losses be diminished? he asks. Not by the companies. The owners and occupants of insured buildings are the only persons who can prevent loss by fire, and so long as architects, builders, owners and occupants alike, as a rule, neglect the simplest principles of safety in construction and occupation, the ash heap will continue to increase. There is slight improvement in normal years; the destruction of property by fire bears a lessened proportion to the amount at risk. Slowly and surely improvement in protection and inspection is gaining.

It, therefore, follows that critics can find no true ground for alleged excess of charge by fire insurance companies for granting contracts of indemnity against loss by fire. There may be many exceptions taken to details, but on what ground could State or municipal insurance be advocated when men of the highest capacity and longest experience have failed to make fire insurance corporations profitable except in their function as bankers?

REPORT UPON THE EQUITABLE.

The final report of Francis Hendricks, superintendent of insurance for New York State, upon the condition and affairs of the Equitable Life Assurance Society appeared last Monday. In regard to the $685,000 fund carried by the Equitable in the Mercantile Trust Company, it has been discovered that $100,000 of the Equitable's money was applied at one time to that account. In the Turner loans it is shown that the former president, James W. Alexander, without the authority of any committee, assumed on behalf of the Equitable Society obligations amounting to more than $2,000,000, for which the Henry B. Hyde estates, Louis Fitzgerald, Marcellus Hartley and others were personally responsible. Mr. Hendricks, in his final report, makes a reduction in the total amount of the Equitable's assets of more than $15,000,000, namely from $80,000,000 to about $62,000,000.

INSURANCE MATTERS.

Frederick Grinnell, inventor of the famous Grinnell sprinkler and other fire protection devices, is dead. He was president of the General Fire Extinguisher Co., of Providence.

We learn that the assistant secretary and agency superintendent of the Fidelity and Casualty Company, of New York, Mr. Henry Crossley, has gone West, with some intention of placing an agency at Winnipeg.

At the annual session of the Connecticut State Board of Trade, held on the 25th ult., a petition was submitted from Hartford underwriters in support of the report against national supervision of insurance which was presented at the above meeting.

The following is from the New York Evening Post:—"Our scoundrelly financial magnates are breeding socialists as in a forcing-house. But it is of the highest importance to ascertain what their numbers and temper are; and for this purpose the Hearst candidacy will serve admirably."

Pausing uncertainly before a desk in the big insurance office, the Hibernian visitor said to a clerk: "Oi want to tek out a pawlicy." "Life, fire, or marine?" drawled the dapper clerk, with infinite sarcasm. "All three, O'im thinkin'," retorted the applicant, "Oi'm goin' fer a stoker in the navy."—The Fireman.

Official notice was received a week ago at Wilmington, N.C., of the suspension of Cornelius Harnett Council No. 231, Royal Arcanum, because of its recent circular letter protesting against the advanced insurance rate. The letter is construed as an act of "wilful insubordination, and contempt of superior authority." The local council has over 150 members, some of whom have been policyholders for a quarter of a century. The insurance in force, and vitiated, amounts to over $500,000. An appeal has been made.

The fire-fighting conditions in Buffalo continue to be unsatisfactory, and the fire underwriters, almost without exception, who have agencies there, are insisting upon the collection by their agents of the 35 per cent. rate advance decided upon some months ago. The newspapers and the merchants of the city are very angry with the underwriters for this, but meantime the work of supplying the sadly needed water improvements proceeds at a snail-like pace. It is likely to be long before the congested district of Buffalo may be said to be adequately protected against the fire hazard.

A despatch from Akron, Ohio, dated 28th ultimo, says that quo warranto proceedings have commenced in the Circuit Court against the Mutual Life Insurance Company and the New York Life Insurance Company to oust them from the State of Ohio, by taking their franchises from them, on the ground that the companies have misused their powers for the past five years in violation of the laws of the State. Thirty-three interrogatories are submitted to the companies to be answered. The appointment of receivers is asked for.

The new offices in Montreal of the Mutual Life Insurance Company of Canada, secured when at last the company's business had fairly outgrown its old ones, consist of seven rooms at 171 St. James Street, on the first floor of the Star Building, an excellent position. The company has a new manager in the Province of Quebec in the person of Mr. G. H. Allen, who had been for twenty-two years in the service of the Standard Life, as agent in Belleville, inspector of the Midland District at Peterboro, later at Kingston, in 1900 general inspector for the Maritime Provinces and Newfoundland, and later chief inspector in Canada for that company. He bears an excellent record, and will doubtless prove an acquisition to the forces of the Mutual Life of Canada.

The following fire insurance lesson we find in the latest issue of the Maritime Merchant:—"As we crossed from Waterford to Penobsquis, N.B., through the back country, we passed the ruins of an old farm house and buildings. A forest fire had swept them out of existence, and the owner had not a cent of insurance. 'For an annual outlay of $18 or $20,' said Mr. Frier, 'this man could have had what would have set him up in business again ($3,000). He is now a poor man and too old to make a fresh start.' This experience brings up the question of how far storekeepers should go in persuading customers to buy fire insurance. For their own protection as well as for the benefit of the insurants themselves, they ought to make more interest. There is no man in the world who owns anything that can be destroyed by fire, but should have it adequately protected if he is not in a position to carry the risk himself. It is one of the things that farmers and business men are far too careless about. We only realize what fools we are when the fire occurs."

GROCERS AND PROVISION DEALERS.

C. J. Hurt has sold his large flour mill in Carberry, Man., to J. B. Howard and a syndicate of Minneapolis capitalists. It is understood the new proprietors will erect several mills throughout the West.

The entire plant of the Petrolea Packing Company at Petrolea, Ont., was on the 31st ult. destroyed by fire, together with a large quantity of bacon, beef, etc. The loss is somewhere near $100,000, largely covered by insurance. About seventy-five men are thrown out of employment.

La Compagnie de Laiterie de Montréal, (Limitée), is the name of a new concern recently started in Montreal for the purchase and sale of dairy and other farm products, and the manufacture and packing of butter and cheese for local consumption and for export. A. Fortier and F. Monette, of Montreal, are interested in the new concern, which has an authorized capital stock of $100,000.

Some interesting calculations are presented by Mr. F. C. Reford, chief of the poultry division of the Dominion Agricultural Department, as to the present and future status of the chicken industry. Mr. Reford takes the figures of the 1901 census as the basis for his calculation; they are eleven million laying hens, 84,123,802 dozen eggs, valued at $10,268,159. This is an annual average of 91 eggs per bird. Mr. Reford says: "If the same rate of increase were kept up from 1901 to 1911 as from 1891 to 1901, we should have about fifteen million laying hens at the same average (91 eggs), we should have in 1911 about 110,500,000 dozen, which at the same price (12½ cents per dozen) woudl bring $13,812,000." Anticipating an improvement of laying powers by proper methods of breeding and selection the chief of the poultry division says: "With the improvement in the laying qualities of the hen that might reasonably be expected from the use of the trap nests the eggs laid in 1911 should be worth at least $22,767,857, an increase of revenue of about $9,000,000. This is calculated on an average lay of 150 eggs per hen per year, and the average price of eggs in 1901, which was much less than for 1905."

DRY GOODS NOTES.

A visit to the wholesale fur emporium of A. A. Allan & Co., Toronto, reveals a remarkably complete, up-to-date fireproof warehouse of seven stories and basement. It may be said that there is not a merchantable kind of skin in the world that is not represented in this fine collection; moreover, they are shown in all grades and at all prices.

The "Manchester Guardian" apparently does not think very highly of the importance of Canada as a wool producing country. It says the British Isles are responsible annually for ten times the extent of the Dominion clip of about twelve million pounds, and of the world's total Canada produces less than one-half per cent. This small production, it contends, is of quality fit only for the manufacture of medium goods.

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ended with Thursday, November 9th, 1905, as compared with those of the previous week:—

	Nov. 9.	Nov. 2.
Montreal	$32,161,904	$28,589,319
Toronto	24,180,587	22,817,954
Winnipeg	11,495,762	11,606,527
Halifax	2,277,288	1,876,649
Hamilton	1,817,024	1,405,718
St. John	1,343,706	1,139,569
Vancouver	1,975,031	2,307,116
Victoria	971,725	589,417
Quebec	2,332,254	1,667,486
Ottawa	3,094,876	2,340,853
London	1,144,895	1,081,320
Total	$82,795,052	$75,419,928

AN ECONOMIST ON TRADES UNIONISM.

Professor Adam Shortt says: The cause of trades unionism is not the cause of the whole laboring class, and indeed could not be. It is the cause of organized labor only which must suppress competition, thus crowding the surplus workmen into lower grades of unskilled and unorganized labor. The situation has largely come round to this, that it no longer depends upon capital, but upon the trades unions, as to whether labor should or should not find employment, or at least be eligible to find employment. One effect of the increasing power of trades unionism is to concentrate the poorer and less capable grades of labor in the unskilled and unorganized trades, and thus to swell the ranks of the poverty-stricken and sweated labor bands. Organized labor has thus disposed of the dream of its earlier advocates, that it was capable of bringing universal redemption to the lower classes. On the other hand, the training and self-discipline incidental to the meetings and affairs of the trades unions afford an excellent school in civics, training the members for the wider duties of citizenship and preparing the more capable and intelligent of the laborers to take a new, more rational and more effective interest in municipal, provincial, national, and even international duties and obligations.

MICA AND ASBESTOS

The Mining Branch of the Dominion Department of the Interior has issued two reports on subjects of particular interest to Canadians, namely, mica and asbestos. The writer is Mr. Fritz Cirkel, M.E. The reports deal quite fully with the physical and chemical properties of those minerals; their geological occurrence and distribution in Canada; the methods and machinery employed in mining; their mechanical treatment; the status of the mining industries in these lines; the commercial application thereof; their occurrence in Canada and foreign countries; the laws governing the prospecting for and mining of the minerals. The report on mica refers to two varieties, muscovite and phlogopite. The occurrence of the former is limited to a few locations in Canada, and according to the report, "the mining of this mineral has been attended with many difficulties, owing to the great dispersion of the deposits, their sporadic and sometime erratic occurrence and their inaccessible location. The phlogopite, or amber mica, industry, however, is in a flourishing condition, the output for the last year having a value of close to $200,000." This mineral, it will be remembered, was mined some fifteen years ago in connection with phosphate in the Lievre and Templeton country, but at that time it was not considered valuable. To-day many of these old phosphate mines are in operation for the sake of the mica, the phosphate being on account of its low value at present mined as a by product. Phlogopite mica is exclusively mined in Canada and its flourishing condition is due to the large demand for it in connection with electrical machinery. An important producer of mica is India, but the Canadian article is preferred.

Asbestos is a mineral which, so far as profitable production on a large scale is concerned, may be said to be the exclusive possession of Canada. Last year the value of the output was $1,200,000, all in the eastern townships of Quebec. The deposits in that region are peculiarly adapted for spinning and for the finer manufacturing purposes. Not only this, but they have further great advantages in accessibility and the ease with which the fibre can be extracted.

* * *

WORLD'S GOLD OUTPUT.

The report of the directors of the United States Mint's completed report on the world's gold output in 1904, given out last week, is a document of unusual interest. In the subjoined table, the Mint figures are compared with those of the same authority for 1903 and 1902. It shows the following important changes from 1903:—

Increases.

United States	$ 7,131,500
Mexico	1,927,800
Africa	17,915,800
Japan	1,981,300

Decreases.

Canada	$2,434,500
Australasia	1,442,800
Colombia	750,000
China	2,824,700

The world's gold production in the past three years has been as follows, in values:—

	1904.	1903.	1902.
North America—			
United States	$80,723,200	$73,591,700	$80,000,000
Mexico	12,605,300	10,677,500	10,153,100
Canada	16,400,000	18,834,500	21,336,700
Africa and Australasia—			
Africa	$85,913,900	$67,998,100	$39,023,700
Australasia	87,767,300	89,210,100	81,578,800
Europe—			
Russia	$24,803,200	$24,632,200	$22,533,400
Austria-Hungary	2,117,300	2,245,100	2,171,300
South America—			
Chili	$ 636,900	$ 666,900	$ 666,900
Colombia	1,974,400	2,724,400	2,522,000
Brazil	2,043,500	2,274,200	2,099,900
Venezuela	300,000	84,500	433,800
British Guiana	1,608,800	1,611,300	1,808,600
Dutch Guiana	481,200	375,900	322,000
French Guiana	1,788,800	2,101,500	2,420,200
Peru	1,329,200	592,600	2,326,100
Central America	1,120,700	1,875,300	2,001,900
Asia—			
Japan	$ 3,984,000	$ 2,002,700	$1,287,000
China	4,500,000	7,324,700	8,731,800
Korea	3,000,000	3,000,000	3,000,000
India	11,495,500	11,428,900	9,588,100
British East Indies	1,392,800	1,176,200	1,027,100
Dutch East Indies	662,500	501,500	474,000
Germany, Sweden, Italy, Turkey, Great Britain, Argentina, Bolivia, Ecuador, Uruguay, and Siam			504,800
Total	$347,150,700	$325,527,200	$296,048,800

For a series of years the gold production of the world has been as follows:—

1904	$347,150,000
1903	325,527,000
1902	296,048,000
1901	260,992,000
1900	255,634,000
1899	307,168,000
1898	286,586,000
1897	236,073.000
1896	202,966,000
1895	199,304,000
1894	181,175,000

Mr. Roberts, the director, has this to say in his report of the influence of the new gold on prices:—

"Assuming that new supplies of gold should come upon the market so much faster than they can be absorbed in the natural expansion of business that a new relation is forced between gold and commodities, of course the costs of gold production would rise. The mine-owner would have to give more of his product in exchange for the labor and supplies required to operate his property. The effect of rising costs upon the production of gold would depend upon the marginal profits, mines producing at small profits, and mines operated. In every mining district there are mines producing at good profits, mines producing at small profits, and mines operated at a loss, but with the hope that they will do better. Every increase in costs would submerge the latter more deeply, add to list of the unprofitable and close some of them."

The conclusion reached is that "although some items of mining costs have increased, the tendency on the whole is still downward. Improvements in mechanical appliances and metallurgical methods have so far more than offset the influences making for higher costs."

* * *

LINGERING DELAYS.

Curiosities of Literature is a well-known volume of the last century. Curiosities of Commerce would be of not inferior interest if compiled to-day. The insolvency courts of various countries offer instances which, while not exactly rarities are calculated to arrest the attention. We have had in Canada numerous cases where John Doe has compromised with his creditors at a very few cents in the dollar, and where Richard Roe's estate, being liquidated, has made disappointingly small returns to his creditors. But we have not, in this country, instances comparable to those mentioned in an October issue of "The Mercantile Guardian," of London. Thus, says Mr. Lindley Jones of that paper:—

"I have from time to time drawn attention to the unconscionable delay in winding up insolvent estates, particularly under the old Bankruptcy Act. I see that a Mr. John J. Wilson, a tinsmith, of Whitehaven, failed on

June 3rd, 1871, and that supplementary dividend was declared on October 4th this year. Thirty-four years and four months would seem quite sufficient time in which to wind up a tinsmith's estate.

"But here is another instance of delay which I think beats all records. Mr. Charles Farmer, an ironmonger, of Edgware Road, failed in February, 1848. On the 2nd of next month the Court of Bankruptcy will sit to audit the assignee's accounts, and on the 9th prox. it will "make a final dividend." It has only taken 57¾ years to reach this desirable end."

⁂

FIRE INSURANCE SCHEDULES.

Some of the fire insurance experts do very funny things; one of them recently prepared a schedule, which becomes rather interesting when you examine it. This schedule covered $7,050, being

$1,500	on item No.	1
2,000	" " "	2
1,200	" " "	3
1,500	" " "	4
850	" " "	5

and issued a policy for $3.550, stating that "This policy, being for $3,550, covers $\frac{3.550}{7,050}$ of the specified amounts attached to each item in the schedule." The effect of which was to cover

$ 755.33	on item No.	1
1,007.10	" " "	2
604.25	" " "	3
755.34	" " "	4
427.98	" " "	5

The insured afterwards wanted to increase the schedule so as to cover $2,000 on item No. 1 by a new policy.

The agent prepared a new schedule covering

$2,000	on item No.	1
2.000	" " "	2
1.200	" " "	3
1,500	" " "	4
850	" " "	5

and issued a policy for $4,000, stating that "This policy, being for $4,c00, covers $\frac{4,000}{7,550}$ of the specified amounts attached to each item in the schedule." The effect of which was to cover

$1,059.61	on item No.	1
1,059.61	" " "	2
635.76	" " "	3
794.70	" " "	4
450.32	" " "	5

The two policies made a total insurance of $7,550 ($3,550 + $4,000), but instead of making $2,000 insurance on item No. 1 as was intended made only $755.33 + $1,059.61 = $1,814.94, and instead of restricting the amounts insured on the other items to the amounts specified in each of the schedules actually increased them, at the expense of item No. 1 so that instead of

$2,c00	on No.	1	there was	$1,814.94
2,000	" "	2	" "	2,066.71
1,200	" "	3	" "	1,240.01
1,500	" "	4	" "	1,550.04
850	" "	5	" "	878.30

There should be some intelligent purpose in the preparation of a schedule; we may reasonably suppose it for the setting forth of the amounts insured upon each item, in which case it should be stated somewhat as follows: This policy being for $—— covers (say) one-tenth of each of the several amounts attached to each item of the schedule. Insurance is permitted upon each of such items to the extent of each of the several amounts attached thereto on this schedule. The insured warrants that he will maintain valid insurance upon each several item of this schedule to the extent of the amounts attached to each of such items, or failing to do so will be a co-insurer to the extent of any deficiency on any of such items.

The abstruse, mystifying and misleading practices now prevailing in some sections of the country should be abolished and a plain practical policy adopted.—Henry Lye, Adjuster.

⁂

AFFAIRS IN HALIFAX.

C. W. Spencer, general manager of the eastern railway lines of Mackenzie & Mann, has been inspecting the Halifax and South Shore Railway. He expresses the opinion that the railway is likely to become one of the most profitable of the company's system. The outlook for both freight and passenger traffic he considered very encouraging and thought the lumber business particularly would be of the utmost value to the line for half a century at least. The people, however, are less satisfied with the railway than the general manager appears to be. The service has been far from satisfactory, being both inadequate and irregular, and the Provincial Government has been importuned to bring its influence to bear on Mackenzie & Mann. The railway has been very liberally aided by the Province of Nova Scotia.

Prince Louis of Battenberg, who sailed away to New York to-day, after six weeks of festivities unexampled in our history, made an important announcement regarding Britain's naval policy in North American waters touching the Halifax dockyard and base. He wished he said to remove any possible feeling that the Admiralty had treated Canada shabbily. The cruiser squadron would be able to look after the interest of this part of the Empire better than ever before. The formation of the squadron meant that a lot of obsolete ships of little or no value as a protection were withdrawn, and an enormously powerful fleet substituted, which in this age of telegraphy and cable, could be summoned for protection at short notice. The greatest regret in Halifax at the departure of the fleet was, naturally enough, due to the fact that a large amount of money would be withdrawn from circulation. The presence of a large fleet here every summer is likely.

The annual report of the several civic departments of Halifax has just been issued, for 1903-4, the earliest on record for many years. The valuation of the city for assessment for 1903-4 was $24,870,000, and the rate per hundred, $1.66. For the present year the assessment was $24,797,229, and the rate $1.69.

Submarine bells are being placed at Sambro, at Egg Island and about eight miles off Sambro, attached to a Wilson buoy, which also has the acetylene gas light and horn. It is

the intention to place these bells at Chebucto Head and at the entrance to the harbor also. The Plant Line, Allan Line, and other steamers entering this port are being fitted with receivers.

As to the departure of the troops nothing definite appears to be known. Leases of dwelling houses held by the War Department for the troops, many of which expire on November 1st, have been renewed until May, and the officers know nothing as to their departure. It is going to be an exceedingly difficult proposition to get men to occupy the garrison, particularly men who are any good.

The Sydney Cement Company is about to experiment with the treatment of slag by a new process, which if successful, will be followed by the establishment at Sydney of one of the largest cement plants in the world. The object is to increase the output to 3,000 barrels per day.

The Robb-Mumford Boiler Company has declared its first semi-annual dividend of 3½ per cent. on preferred stock, payable November 15th. The earnings are exceeding all expectations, and dividends on the common stock are looked for before long.

The recent successful docking of the steamer "Bremen," North German Lloyd, in the drydock here calls attention to the admirable facilities which Halifax provides in this respect. The "Bremen" was the largest ship ever in the dock, being 576 feet over all, and with cargo 16,000 tons.

The effect, in a business way, of the visit of the Second Cruiser Squadron to this station, has been compared to the sudden transplanting of a good-sized country town to Halifax for six weeks. The ships of Prince Louis' squadron carry 4,300 men all told. It is estimated that at least $200,000 was left among the tradesmen of this city by the sailors —a clear gain to our circulation. A large part of this was spent by the Jackies at the smaller shops, for which it proved a windfall for them.

The market for dried fish here has followed the precedent of the past two years and opened very high. Lunenburg fishermen are turning up their noses at the price of $5.75 per quintal, which a few years ago they would have considered a lovely dream. As high as $6.50 per quintal or hundred-weight has been paid for prime large merchantable. The average price now being offered by the dealers is $5.75, but they are not finding a ready response to this figure. The Labrador market, however is very weak, it being anticipated that $3.50 will be the ruling price for Labrador fish; and this is likely to affect the Bank fish situation.

Reports from all quarters, and particularly from commercial travellers just in, indicate a most encouraging aspect of prosperity all over the province. All the crops have been particularly good; the fishermen have not had a large catch but will more than make up for this by the high prices prevailing; industrial concerns are all busy. The tone is very different from that which prevailed at this time last year when farmers were facing the winter with barns almost empty of hay. The better condition is reflected in all branches of trade, in which there is an agreeable activity.

Halifax, 6th November, 1905.

* * *

CARELESSNESS REGARDING FIRE.

The present season of the year is one admirably adapted for the finding out of defects in flues and heaters. Cold weather will be coming on shortly, with all its dangers, from disregard in this respect. A propos of these dangers, the Fire Marshal for the State of Ohio gives many suitable hints, some of which follow:

In the chimney look for cracks from settling, or openings from disintegration of the mortar or from a soft brick the crumbling of which might permit the escape of sparks. Search stovepipes for misfit or parted joints, open seams and rust holes. A stove pipe should not pass perpendicularly into a chimney, nor be run through an area not open to observation. A double sleeve should surround a pipe which passes through a partition and one passing through a summer kitchen roof is too dangerous even if the wood near it is displaced by zinc.

A stove pipe hole should not be plugged with paper nor papered over without a metal plug in it. Cracks in stoves should be sought and woodwork if within a foot and a half of the stove should be protected by zinc or tin. Carelessness as to flues caused no less than 729 fires in Ohio alone during last year.

Carelessness, just heedless, reckless, senseless carelessness costs that State, he estimates, about seven million dollars a year. During the first half of 1905 there were 2,577 fires with a loss of $3,946,190. The losses from adjoining fire, lightning and incendiarism being substracted there remain 2,258 fires chargeable to the carelessness of the occupants of the premises. And what is true of Ohio is probably true, in proportion, of Ontario as well.

Who pays the loss? the Marshal pertinently asks. The insurance companies? No, the office insurance companies is fiduciary, simply. They appraise the danger, tax it and distribute the loss. Every wage-earner pays his share in advance, it being a part of his rent. The annual fire loss plus the cost of fire departments is equal to 15 per cent. of the total year's product of all the industries of the State. So, every producer gives one and a half hours out of each ten hour day to make good the fire loss.

* * *

BANKING AND FINANCIAL.

On Friday last, at a meeting of the board, Lieut.-Col. Pellatt was elected vice-president of the Dominion Telegraph Co., vice Thos. R. Wood, deceased.

To replace Mr. William Ince, deceased, the directors of the Dominion Bank of Canada have appointed Mr. Robert Christie, president of the Christie-Brown Co., a member of the board.

The U.S. Steel Corporation, whose statement has just been issued, announce a surplus for the quarter, after charges and preferred dividend have been provided for, of $10,672,613, compared with $10,570,681 in the previous quarter, and $1,312,988 for the corresponding period of last year.

The report of the Civic Auditor of Halifax shows that the gross debt of that city last year was $3,394,690, and it has been increased during the present year about $75,000. The civic rate of taxation is now $1.69. In 1868-9, it was only .92.

The Toronto firm of John MacKay & Co., chartered accountants, consulting actuaries and bond brokers, inform us that they have removed their offices from the Canadian Bank of Commerce Building to Nos. 7 and 9 King Street East, where they have secured increased accommodation required by their business.

Over $7,000,000 worth of gold produced in the Yukon has paid royalty to the Government, this year up to October 19th. The per capita production of gold for the ten months of the present year is estimated to amount to about $1,500, which is claimed to be the largest of any mining district in the world.

On the local financial market a large number of Nova Scotia telephone rights have been changing hands at five cents each. The new stock has been issued by the company at a premium of 15 per cent., and 50 per cent. is to be called up by the company, making the payment now $5.75 per share, and a similar one later on. Subscription lists are now closed, and practically the whole $125,000 is taken.

The Summerside Board of Trade, at its quarterly meeting last week, adopted the following resolution upon receiving the resignation from the board of Mr. James S. Blagdon, who has been manager of the Royal Bank of Canada at Summerside during the past five years, and who has been transferred to another agency: "Resolved, that in accepting this resignation the board desires to express its deep regret in losing from its membership a gentleman, who, during his residence in Summerside, has so favorably interested himself in the social and business life of the town as to win the esteem of all classes of citizens, and who during the past

The Traders Bank of Canada

Dividend No. 40.

Notice is hereby given that a Dividend of Three and One-half per Cent. upon the Capital Stock of this Bank has been declared for the current half-year, being at the rate of Seven per Cent. per annum, and the same will be paid at the Bank and its Branches, on and after

Friday, the First Day of December next.

The Transfer Books will be closed from the 16th to the 30th of November next, both days inclusive.

By order of the Board,

The Traders Bank of Canada.
Toronto, 13th October, 1905.

H. S. STRATHY,
General Manager.

four years has been an honored and useful member of the council of this board." To this the "Guardian" adds that Mr. Blagdon leaves the Island with the general civic endorsement of the above resolution.

Word comes from Winnipeg that almost a million dollars of the stock of the Northern Bank of Canada has been subscribed. The shareholders have met and completed organization, and the bank opened for business on Wednesday, 8th November. The members of the board are, Sir Daniel McMillan, Hon. R. P. Roblin, A. J. Adamson, J. H. Ashdown, D. C. Cameron, G. R. Crowe, Capt. Robinson, F. W. Stobart, Hon. Dr. Montague, of Winnipeg; J. A. McDougall, of Edmonton; F. Nation, of Brandon; A. Stamford White, of Chicago. Sir Daniel McMillan was elected president, and Capt. Robinson vice-president.

"The Banker" was the subject of an address by W. T. Fenton, vice-president of the National Bank of the Republic, Chicago, before the Illinois bankers. That gentleman gave some attention to the "bankers," so called, who maintain flourishing offices in the upper floors of Chicago business blocks and advertise broadcast shares in coffee plantations, rice plantations, fake mining companies, Mexican timber lands and home buying associations. He portrayed the ways of the "shark" banker, of the foolish and ignorant banker, and of the one who fails to distinguish between the money of the depositor and of his own, and then he told of the careful and conscientious banker who represents the best there is in the banking business.

An important announcement by the Bank of New Brunswick directors is that the stockholders are to meet on December 9th to consider the question of increasing the bank's capital stock. The present capital is only $500,000 and there is a rest of over $800,000. The directors have not told the public what their proposal will be but the general belief is that they will advise an increase to $2,000,000, which will give the bank a fairly large capital and fit it to go into the Upper and Western Canada fields to compete for business with the other financial institutions. This move is reasonably sure to meet with a more kindly reception than was the proposal to destroy the bank's identity by selling it out to the Bank of Montreal. In this connection it is understood that Mr. Stavert will leave St. John about the first of next year, but as yet no announcement has been made of his plans and intentions.

It is announced by circular that the growing requirements of both bond and stock exchange business have caused the dissolution of Æmilius Jarvis & Co., Toronto, by mutual agreement, and the formation of two new firms, as of the 1st of November, 1905. The names of the two new firms will be: Æmilius Jarvis & Co., and Edward Cronyn & Co. The former will be composed of Æmilius Jarvis and C. E. A. Goldman, and will take over the bonds of the old firm, while Edward Cronyn & Co., will take over the stock exchange business of Æmilius Jarvis & Co., which has been entirely managed by Mr. Edward Cronyn for the past four years. "The policy of the old firm has been to do a strictly commission business of a conservative kind, not going into the market on its own account, and thus endangering clients' interests." A circular letter on the condition of the stock market will continue to be issued, similar to the one written by Mr. Cronyn for some years, while a member of the late firm of Æmilius Jarvis & Co.

The weakness of human nature, the disposition to retrieve one false step by another, the delusive hope that something will happen to enable an erring man to recover his position, the perverse resolve not to confess a wrong step but rather trust to time and "luck" or take a plunge whose result may reinstate him—all these are illustrated, we doubt not, in the case of the unhappy Hillhouse Brown, manager of a branch of the Bank of Hamilton, who is found to be a defaulter to the bank for scores of thousands of dollars. It is some consolation to his friends to learn that he was not a cold-blooded and deliberate thief, who robbed the bank in order to get money for prodigality or vice—for after enquiry we consider the stories circulated about his extravagant spendings in sport or social life much over-stated. The fact appears to be that he was too yielding as a banker and lost money for the bank by trusting undesirable people who did not deserve his confidence and did not keep faith with him. And that, finding out the loss, he was ashamed to confess his weakness, preferring to resort meanwhile to falsification of the books and probably to making bad worse by speculation as a means of recovering the amount lost. The case is a distressing one, not so much because the culprit was highly connected as because he was by disposition and training an honest man, of whom his relations and friends were proud. So much the more grievous, therefore, his lapse and so much the more pathetic his fruitless struggles for relief. The bank's announcement regarding the matter is that the amount of the defalcation will not exceed, if even it reaches, ninety thousand dollars.

* * *

TO CORRESPONDENTS.

James Cameron, London,—Have written you.

J. B. M., City.—Book received. Shall review it with pleasure at an early day. It contains strong and nutritive meat.

Bank Clerk, Winnipeg.—The figures, extending over many years, are to be found in bound volumes of the Monetary Times. If your library does not possess these you will find some of them in the Statistical Year Book of the Dominion, or in the Journal of the Canadian Bankers' Association.

H. Mc. L., Montreal.—Thank you. See page 588 of last week's issue. The description is capital fun: not a man of them can take offense. Have a pamphlet from W. R. C. about the Technical College. Have reviewed it. The new building is a stately one, and promises to be as big as the bluestone barn on Cote des Neiges road.

Mr. Paul Staes, Secretaire de la Banque d'Escompte, Belgium.—(1) We are sending you the papers requested. (2) Have asked the Dominion Government to forward you from Ottawa a copy of the Statistical Year Book of Canada, and are mailing this week some pamphlets upon financial subjects as well as a copy of A History of Banking in Canada, by B. E. Walker.

* * *

—Mr. Peter McKenzie, manager of the Chibougamau Mining Company, working in the upper Lake St. John district, stated when on a recent visit to Quebec recently that that section is far richer in many kinds of mineral wealth than any one ever suspected. In addition to valuable deposits of gold, asbestos, and copper, some important discoveries of nickel are also said to have been located. Prospectors working for his company, he says, have located three veins of pyrites carrying a large percentage of nickel. The veins located are close to Lake Chibougamau, which is not very far from Lake Mistassini. During the summer the company also uncovered two additional gold bearing quartz veins, ten feet in width and located some magnetic iron of very fine quality, some of which would assay fully eighty per cent. Speaking of the activity with which prospecting work had been taken up in a district situated 180 miles north of Roberval, Mr. McKenzie stated that fully fifty miles above Lake Chibougamau had already been taken up, and various deposits had been found by the different parties. English capitalists have become interested in the district, and have sent in a party headed by Captain Machin and Captain Eaton. This party have taken up twelve miles under prospecting license. The story goes that this party have found copper that when assayed would be worth $120 a ton, and have also located a galena deposit.

The Merchants Bank of Canada

Notice is hereby given

That a dividend of 3½ per cent. for the current half year, being at the rate of 7 per cent. per annum upon the Paid-up Capital Stock of this Institution, has been declared, and that the same will be payable at its Banking House in this city, on and after

Friday, the 1st Day of December next.

The Transfer Books will be closed from the 16th to the 30th day of November next, both days inclusive.

Seeking an Investment?

If you have money you wish to invest safely, we should like you to consider our

Four Per Cent. Bonds

They are much in demand by prudent investors, who prefer unquestionable securities for their capital.

We shall be pleased to send Specimen Bond, Copy of Annual Report, and all information on receipt of address.

CANADA PERMANENT MORTGAGE CORPORATION,
Toronto St. TORONTO

THE haste to get rich often leads many a person who has money to invest to speculate in bonds and stocks ground out by speculators during good times when everything is on the boom, and which, when times are hard and the investor is most likely to need his money, must be sold at a great loss. We would advise you not to speculate with this class of stock, but to invest your money in the Debentures of The Standard Loan Company, which bear interest at the rate of five per cent. per annum, payable half yearly; interest coupons are attached to debenture made payable to bearer. 8

The corner-stone of the new post-office and custom house at Souris, P.E.I., has been laid. It will be four stories high, and constructed of Island red sandstone from the Creamer quarry.

Mercantile Summary

L. J. W. Pepin, formerly a dry goods clerk, who started for himself as a retailer in Montreal last February, has assigned on the demand of a Quebec creditor, and is said to owe as much as $14,000.

J. E. Brassard, general merchant, of L'Anse au Foin, Que., otherwise known by the parish name of St. Fulgence, has assigned. He began business in the spring of 1904, with, it is said, little experience. His career has been brief.

Among the country failures in the Province of Quebec for the week are those of several bakers. D. Lacombe, of St. Paul l'Ermite, recently had a judgment recorded against him for $1,061, in favor of a large milling company, as a consequence of which he has assigned. ——R. Julien, of Beauceville, who also keeps a general stock, is reported in trouble, his estate being in the hands of the representative of a leading Montreal creditor, as Provincial guardian, and Joseph Faucher, of Victoriaville, is also reported insolvent.

The output of the collieries of the Inverness Coal and Railway Company for October was 23,000 tons, as compared with 16,000 for the previous month.

It is reported that Herman & Stein, formerly two journeymen cloakmakers, who started business for themselves in Montreal last spring, are now absentees, leaving some obligations; insolvency proceedings have been instituted.

A general storekeeper, at Ste. Flavie Station, Que., Napoleon Gagnon, whose premises were recently closed under seizure, at the suit of La Banque Nationale, has now assigned. He is said to owe $4,500, with apparent assets of $5,500.

The general merchant at Labelle, Que., A. Gauthier, who recently approached his creditors with a compromise offer at the rate of 60 cents on the dollar, has since assigned. The business was opened in 1901, as a branch of his father's establishment at St. Jovite, being subsequently taken over by him.

It is stated that Canadian, British, and American capitalists are forming a syndicate for the manufacture of soda ash and similar products. It is understood that properties containing salt and lime (the main ingredients entering into the manufactured article), have been practically secured already.

The affairs of the British & German Importing Co., of Montreal, a pretentious title made use of by one T. H. Smith, for the purpose of doing a retail and small jobbing business in dry goods, are in bad shape. Mr. Smith was reported as an absentee last week, and at a meeting of creditors subsequently his wife attended, and made an offer of 30 cents on the dollar, on liabilities of about $15,000. Smith, if that is his real name, came to Montreal in 1901 from New York, and his antecedents are somewhat uncertain.

Last week, in Sherbrooke, the annual meeting of the Moore Carpet Company took place. The report showed the business of the concern to be in a healthy condition. The plant has been worked during the past year to its utmost capacity, a ready market having been found in Canada, for all goods they could turn out. The following officers were elected for the coming year: President, L. A. Bayley; vice-president, S. W. Jenckes; directors, Wm. Farwell, W. R. Webster, H. A. Moore, D. M. Steindler, J. T. Fox; secretary-treasurer, Wm. Morris.

Some of the beet root sugar enterprises that Ontario towns rushed into a couple of years ago are having an experience like that which followed the experiments of certain Quebec towns a score of years ago. The factory at Wiarton has been closed and the machinery sold, leaving the municipality with the prospect of a law suit in view, in return for a gift of $20,000. Towns too eager for industries never seem able to learn by any experience except their own.—Montreal Gazette.

DOMINION SECURITIES CORPORATION LIMITED
26 KING ST. EAST TORONTO.

Mercantile Summary.

The counties of Stormont, Dundas and Glengarry are asking the Provincial Government to provide $48,526 to assist in straightening and deepening certain sections of the Aux Raisins river, the total cost of which is estimated at $97,060, and which work, it is believed, would benefit 32,656 acres of land in Roxboro, Osnabruck and Cornwall townships, and would absolutely reclaim two-thirds of that total. It is believed the Government has authority to make such a grant under the Drainage Act of 1900.

At a meeting of the Staffordshire Iron & Steel Institute, at Dudley, on October 21st, Mr. Walter Jones, the president, said the frantic haste to become rich by taking an unfair advantage of the credulity of the public was almost universal. Formerly in British trade and manufactures, quality was the first concern, and the supremacy of Britain was built upon good work well and faithfully done. The present tendency was to supply something cheap, badly made with base materials, and unless the standard was raised we deserved to lose our supremacy.

The report of the Alberta Railway and Irrigation Company for nine months ended June 30th last has been issued. The revenue from operation and profit on land sales together totalled $193,471. Of this debenture interest took $159,303, and office expenses absorbed $5,862, thus leaving a surplus of $28,306. Coal sales amounted to 170,682 tons, gross earnings of the railways were $127,714, land sales aggregated 13,190 acres, and realized $164,138, the average price being $12.50 per acre. The company owns 943,995 acres, which are at present unsold, of which about 170,000 acres are irrigable, and 773,995 acres above canal level are non-irrigable, but are believed to be good for winter wheat.

When the citizens of Montreal are aroused to the needs of the city in directions of philanthropy or health they are sure to come forward generously. It is now agreed that there should be two hospitals for the treatment of contagious diseases. One, named St. Luke's, was opened the other day by Archbishop Bruchesi to serve chiefly the East End, where the French-speaking people predominate. The other, the Alexandra, at Point St. Charles, will be chiefly for the English-speaking community. The cost of construction and fitting up will be in the neighborhood of $250,000. Up to the present $110,000 has been subscribed. An appeal is now being made for the balance of $140,000, which must be paid off before the hospital can open free and clear of debt. It is hoped that the city's annual grant will be available for the maintenance of the institution. Three men, James Ross, Sir William Macdonald, and R. B. Angus, have given in all $45,000, and there are many subscribers of from $1,000 to $5,000 each. Half a dozen of the banks have given subscriptions, too.

A Change in the Trusteeship.

Whether of a Will, Marriage Settlement or Bond Issue, is a troublesome and expensive matter.

Where private trustees are appointed such changes are inevitable.

The Trusts Company alone enjoys continuity of tenure, fixity of residence and permanent records.

Circular and price on application.

OSBORNE & FRANCIS,
54 King Street West, Toronto.

Mercantile Summary.

At Glace Bay, C.B., after a raid on illegal liquor sellers the chief of police spilled 3 casks wine, 1 cask gin, 1 cask whiskey, 81 flasks whiskey, 54 flasks brandy, 12 bottles brandy, 15 bottles whiskey, 6 bottles gin, 36 bottles ale, 2½ barrels of ale and porter, 2 eight-gallon jars of whiskey.

The C.P.R. has taken over on a long lease the Tilsonburg, Lake Erie & Pacific Railway, and will after next week operate it as part of its Ontario division. The line runs from Port Burwell to Tilsonburg and Ingersoll, and is thirty-five miles in length, a distance which is now being extended. The C.P.R. by the acquisition of this line achieves access to the Lake Erie ports at Port Burwell.

The plans for the new Charlottetown railway station provide for a three-story building, 118 feet long on Weymouth by 43 on Water Street, resting on concrete foundation. The main structure is to be of Prince Edward Island sandstone, with Wallace grey sandstone trimmings. The building will be of size sufficient to supply good office rooms for the superintendent and staff, with waiting rooms for the travelling patrons of the road.

A report from Buffalo states: The Pennsylvania Railroad is now forwarding a shipment of 440,000 bushels of export wheat from Manitoba to Baltimore, via Buffalo. There is almost a direct route from Buffalo to Baltimore via the Pennsylvania, and Baltimore has the advantage of a differential. This shipment of 440,000 bushels of wheat from Manitoba to Baltimore via Buffalo has stirred up much feeling in northern ports on the Atlantic seaboard, for it shows the possibilities of Baltimore in the export grain trade.

Messrs. Marion & Marion, patent attorneys, Montreal and Washington, D.C., report the following patents recently granted to Canadian inventors through their agency: Belgium—John Rodgers, Yarmouth, N.S., No. 148,541, harness saddle; Joseph Lemire, Drummondville, No. 181,764, railway signalling system.
